"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Greetings everyone!

Here are the lucky and the proud winner(s) of the March prize(s)
at The DarkForce! BBS:

March 2008
1. ST Magazine - Tobiasj wins the free 3 mag. subscription

Congratulations to our winner(s)!

Also, here is Februarys prize:

April 2008
1. ST Magazine - some lucky Atari caller will win a free 3 magazine
subscription.

Congratulations to our winner, and good luck to this months callers!

:)

1898. Axiom AT-846

Newsgroup: comp.sys.atari.8bit
Date: 2008-04-07 20:37:55 UTC
From: Trash80 <trash80@theville.vintagecomputing.net.remove-7zk-this>
Message-ID: <47FA8623.981.atari@theville.vintagecomputing.net>
Source record: 3437

Hi, I have an Axiom AT-846 (eBay special) but no manual. Does anyone know of the manual being available online (i.e. a scanned pdf)? Or is there anything you can tell me about its operation in lieu of a manual?

Regards,
Doug

Well...I think Atari 815 has only ONE density mode, Double Density, MFM. I guess that 815 can not detect the density on the boot sector but it can read 256 bytes on boot 3 sectors. I think it is not compatible backward to Single Density because 815 does not have FM encoding. you guy agree?

The most disk drives have two modes, FM and MFM. They can detect the density on the boot three 128 bytes sectors.

Either there was a third supplier of 810 mechanisms (Shugart), or the info
on that page is wrong. I have both types of 810, one Tandon, and one MPI
(and the mechanisms are clearly labeled as such).

B&C has parts for both types of 810 in their inventory:

http://www.myatari.com/atarixlh.txt

PRA032 MECH 810 MPI DRIVE 25.00
PRA033 MECH 810 TANDON DRIVE 25.00
PRA044 MOTOR 810 MPI DRIVE 10.00
PRA043 MOTOR 810 TANDON 10.00
PRA039 BELT 810 MPI DRIVE 5.00
PRA038 BELT 810/1050 TANDON DRIV 7.95

I still don't understand why 815 has dual drive in one unit. 815 should have
ONE drive, one drive is good enough. One MFM drive is much affordable than
dual drive! Atari is stupid!

Atari 815 MFM was poor reliable drive. Why not 815 use GCR instead of MFM?
Commdore and Apple Disk Drive have GCR encoding. They have not much problem.
GCR drives formats the 256 bytes per sector.

I had two friends that worked there. Atari was out of control at the time in that management was clueless and engineering lacked focus and direction. There was little accountability for job performance.
>
> Atari 815 MFM was poor reliable drive. Why not 815 use GCR instead of

MFM was OK, it is just that with the lack of accountability so much money was wasted that everything done at Atari had *HUGE* overhead attached to it.

I'm not sure if I have my facts straight but the reason why the 815 was dropped was because you could buy two 1050s for less. The 1050 was done out of house, at Tandon IIRC, so it did not have to bear the burden of waste that anyone trying to do something at Atari did. If you were the greatest, hardest working engineer in the world, everything you did would still cost multiples of what it could be done for elsewhere so it would fail.

But that was SOP for the Valley at the time and high tech industries at the time. In my own, pharmaceuticals, we billed ~700% as overhead.

Things were different: I remember ~a 256k memory expansion for a DEC was something like $250,000. For that price a service tech from DEC would fly out to your location and install it. Concept of Federal Express it overnight and have the user install it had not been created yet!

Rick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

1912. ATARI BBS GATEWAY (links to all Atari BBS's on one BBS!)

Newsgroup: comp.sys.atari.8bit
Date: 2008-04-13 14:57:17 UTC
From: Greg Goodwin <Greg.Goodwinp0.f2.n8.z8@fmlynet.org>
Message-ID: <102803b1@familynet-international.org>
Source record: 3301

FamilyNet International Newsgate

A long time & stable Dallas BBS, The Prison Board, has offered to provide a "Favorites page" for the Atari BBS users. Other users (like Tcropper) and I provided an up to date BBS list of the active Atari sites out there, and Rueben (PB Sysop) created a place you can go to, bring up an Atari telnet menu, and go directly to that Atari BBS. icon_smile.gif (Recently a Commodore BBS list has been added too.)

Ever been curious to see the online world of Atari computers? Come check out the Prison Board BBS:

972-329-0781 (this number good for people want to try out Atari modems, and dialup means.)
216.62.20.217 (This IP number is great for Lantronix users, and has not changed for a considerable time.) [IP Still accurate April 13, 2008] (also telnet://rdfig.net)

Trying to dial in with a stock Atari 300/1200 baud modem? You poor soul! But this has been less painful with a new feature. When you log in and the BBS asks for your log in name type "*[First name] [last name] [password]" and you'll skip over the log in screens and get taken directly to the main menu.

Never has the online Atari world been so easy to access from your Atari computer. Simply call up the above system, get to the main menu, X for the internet menu, and then A for the Atari menu. From there, it is simply a matter of hitting 1 through 9 for the Atari BBS's. Atari BBS's in many cases run on real Atari computers like the one you're calling with. Both chats are there, and one BBS is listed that you will not see anywhere else.

And the Prison board makes a great E-mail service too. icon_smile.gif You can E-mail the outside world with a real E-mail account, and if you wanted to surf the web on your Atari computer (especially 8-bits) there are telnetable locations with Lynx browsers you can hit from the Prison Board's telnet out feature.

Let me know here if you have any questions, and many thanks to The Prison Board BBS for this awesome service.

Naturally a BBS sysop loves more users, but seldom have I seen a sysop that have bent over backward for his users that he would be a pretzel at this point. Changes that Rueben has added as of April 13, 2008 for the retro computer community, and all I had to do was ask nicely and give feedback that you've given on how to make it better:

1) Added the Atari BBS list
2) Opened up 300 baud support. (this is turned off on modern BBS's) 3) Paid for the licences to add more lines. I think he started with 3-5 lines. Traffic increased when we started this, and so more lines were needed.
4) Added the Commodore BBS list
5) Added links to the Atari chats on both atarinews and the IRC chat.
6) Added the ability to skip all log-in screens. (this added with 300 baud users in mind).

In 1980, Apple II graphics/sound looks limited.. Graphics on the games look very terrible... Sound is not good. Atari graphics/sound are better than Apple II.. Why did many companies make the games for Apple more than Atari?

I attended to the computer class in the elementary school. There were many Apple computers in the most school. Can anyone tell me a reason why the school chooses Apple even thought the graphics and music were terrible?

Thanks!
Jack

I suspect it has a lot to do with the larger size of the Apple II
market. And the broader range of hardware and software available
for the Apple II, which put it into a lot more applications.

> I attended to the computer class in the elementary school. There were many

Education is not about pretty graphics and sound. Educational software
is about *good authoring* and *entertaining* graphics and sound, which
has almost no relation to their objective quality.

Marketing. In Australia and New Zealand Apple struck deals with the
respective boards of education. It still occurs that way, Acer in
Australia for example. Its got very little to do with reliability,
performance or software. I'd imagine its the same overseas.

Mark

To partly answer your question, here is an *awesome* interview that
covers the origins of MECC, who was instrumental in establishing the
Apple II as the K-12 standard:

http://www.cbi.umn.edu/oh/pdf.phtml?id=177

The interview is done within the larger context of the evolution of
educational computing, and the related financial, technical, and
bureaucratic challenges. Fascinating and informative reading.

In education as in other application areas, a standard platform
is a wonderful thing.

You should have seen the graphics and heard the sound on a TRS-80! This
was the route my Jr. High and High School went with. Just not the same
experience. I was learning Apple Pascal while everyone else was
learning how to scroll their names all over the screen and typing in
crappy maze games from magazines in BASIC.

Although they were contemporaries, the Atari 800 was over two years
newer. Two years as a lot of time to add hardware features. Even so,
the Atari didn't have slots or the software base the Apple II had. I
think the Ataris were seen as more glorified game machines (especially
the 400) and the Apples were seen as more *serious* computers. The
expandable hardware, deep software library, and adequate graphics/sound
gave the Apple II a leg up on the other platforms of the time.

Atari wanted control over everything, which bit them in the ass. At
first they wanted to make cart games of all their coin-op games and
use the coin-ops as free advertising. The problem was that they
rushed so many games to market that they didn't take advantage of the
capabilities of the system. There's an archive of all the email on
the Atari VAX that sheds volumes of light into the inner workings of
Atari and it's no friggen' wonder they failed so gloriously until
Tramiel took over, who happened to turn a profit for a while, but it
was too little too late.

Could it be a problem of development kits: was it so easy to program on
an Atari than on an Apple II ? Were the tools so efficient?
I may be wrong, but the Kyan Pascal was both available on Apple and
Atari: did those tools appear too late?

Guillaume.

And according to the interview, luck as much as anything else
determined that standard. If one accepts that MECC was a catalyst for
the proliferation of micros in schools, then a big reason for the
Apple II entrenching itself was that Apple was the only manufacturer
to take MECC's bidding process seriously:

"MECC dispatched two people out to talk to Steve Jobs and Steve
Wozniak who were the 21-year-old kids with the new Apple computer.

They had already announced their intent to save the world and they were going to help education using the computer. They had no information about what we were doing in Minnesota. They didn't know anybody was using computers in schools. We told them about MECC and said we'd like to buy five Apple II's at a special price. They gave us a special price ... Yes, we got a bid from Apple. We also got bids from other companies. Some of the companies, particularly Radio Shack, were not enamored with this process and thought it was kind of hokey - the process being the bid process and the state requirements - and so they weren't real particular about how they responded. We told Radio Shack, 'You know, if you don't respond in the right way we can't accept your bid,' and they weren't willing to change. Everything was flying high and they were selling TRS-80s like mad. The Atari people and the Commodore people were late and there were very stringent rules - if you aren't in by noon on the appointed day, you are [out]."

(One of a few flashpoints in that interview; the whole thing is captivating, especially to someone who wasn't alive to witness the transition from centralized service-based computing to local autonomous computing.)

1980, wow! That was a long time ago.

In 1980, I remember the Apple II/II+ as having the best graphics/sound at that time, and it had a disk drive! Wow, no more loading from tape.

The TRS-80's built-in screen was screen black and white. It had graphics and sound? If it did, Radio Shack certainly didn't market it, but I do give them big credit for actually selling computers in their stores.

The Commodore pet was text with crude line/block characters in it's font, but it came out roughly the same time as the Apple II. The VIC-20 would show up a LATER, and the C-64 even LATER.

The IBM-PC came LATER and did not have graphics built-in but it did have slots like the Apple II which meant that graphics cards could be added.

Other than in coin-op video arcade games and a game consoles, I don't really remember Atari computers in 1980, maybe LATER in 1981/1982 they started showing up in stores, but Apple had the market by then. The graphics and sound looked good in the demos and in the pre-packaged Atari arcade games. But, could you type:
]HGR : HCOLOR = 5 : HPLOT 0,0 TO 279,159
on an Atari and get a jagged orange line on the screen?
On the Atari, I think you had to write 6502 assembler which had to run within a limited amount of time to do hi-res graphics, am I wrong about this?

In the 1980's, I wrote educational software for the Apple II and Icon computer.

Why schools go with the hardware they choose? I think that it's a government decision and the process changes. I don't know.

Where I lived at the time, the schools in the province of Ontario, Canada primarily had Commodore equipment. And, later the government latched onto putting Icon computers in schools, built by Burroughs / Cemcorp, later Unisys, later maybe Sperry at the end. In the 90's, I think they switched to Macintosh and PC. But, by that time the legacy Apple II still had the of the most educational and games software going for it. And, my friends and their children to this day still play Oregon Trail on their modern computers!

No, but you could type

```
graphics 7
color 1
plot 0,0
drawto 79,79
```

to get an orange line on the screen. (-:

> On the Atari, I think you had to write 6502 assembler which had to run

I afraid so. The c64 had no graphic support in its rather limited basic.
The ataris did, however, string variable support was an annoyance.

It has rarely to do with the hardware capabilities of the systems. The
decision makers rarely had a clue about the hardware in first place, and
other factors are just more important (pricing, discount for education,
long term support,...).

Greetings,
Thomas

Most machines that were designed with a "cartridge slot" were designed
on the "video game principle", and the manufacturers assumed that the
machines would be programmed by *them* not the users, and that software
would be an annuity for them.

Good riddance to them.

Now all we have to do is get rid of their spawn... ;-)

Apple, in contrast, published *everything* needed to make software,
plug-in cards, and even more computers! That was the right vision,
in the sense that it could "start a fire" and seed the computer
revolution. (Note that it was Woz' vision, not Jobs', who rushed
to nail eveything shut as soon as he had the chance.)

Salesmen seem to degenerate to the lowest common denominator unless
provided with strict adult supervision--which was never a strong suit
in the early Apple Corp. ;-)

Put another way, since the only metric generally applied to salesmen
is the quantity of sales, if left unchecked they tend to stoop to
anything to get a sale. "Bribery? What's your problem?"

I'd bet that, for Woz, it was as much a default way of thinking (from the hobbyist ethos) as it was vision. I get the sense that if someone had approached him at the time and asked why he was releasing so much information about a flagship product, he'd have blinked and responded along the lines of: "Well, yeah... why wouldn't I?"

Exactly--I didn't say it was calculated. I think it was his
image of himself as providing a foundation for the contribution
of others.

This was, BTW, the engineering ethos of HP, as well.

Funny this thread started, because I'm just now, 25-30 years later, figuring something out about the Apple II. I was a die-hard Atarian throughout the 80s, and I figured that was a completely logical choice because, well.. let's face it, Performance-wise, the Atari beats the Apple hands-down. In stock form, anyway. But there's the rub.. with all the expansion slots and room for cards in that cavernous shell and with all the technical data that every Apple II shipped with, it practically begs to be modified and expanded. I just got my hands on "The Apple II Resource Directory", summer 1981 edition. Good god, there was a lot of expansion cards available, way back in '81! This appeals to me. Whatever the limitations are of the base hardware, can be overcome with a clever expansion card.

Now, as much as I love the Atari, you just can't do that with them. Sure, the 800 has slots, but they're tiny and most of them are spoken-for with RAM and ROM. And they're damned hard to connect with the outside world. Yeah, the 800XL had an expansion slot, but I guess by that point people weren't interested in making expansion cards.

you know what I want to know? How does the apple interface to a floppy drive with so little hardware?

In short:

Atari drives as you surely know are intelligent - with a 6502-
variant, ROM, RAM and interfaces.
Apple drives are "dumb" - most of the "digital stuff" happens
inside the Apple on a small but very, very clever interface card.

Read the respective chapter in the seminal Apple hardware
explanation book "Understanding the Apple II" which you can
do here: http://victa.jamtronix.com/display/page/4313
If you don't recognize the wizardry of Woz here, then you'll
never will ;-)

Some other bits:

The Apple drives peak at around 11KB/sec and - because of
their design - very flexible to program for. A multitude of DOSses
exist but there are really only two standards: DOS 3.3 and ProDOS.

I don't know if the Apple drives & controller were cheaper but
they surely were cheaper to produce and made good profits.

The Atari drives for all their complexity were flawed from the
beginning: Shitty interface with 2KB/sec which was planned for
tape recorders and modems only, low capacity compared to
nearly all competitors, the need for a DOS in the Atari's RAM
in spite of the ROM in the drive (the Commodore 1541 saved
much memory - other flaws aside).

The only real technical advantage I see for the Atari drives is
that they can be used to stream data into RAM and the
application runs mostly undisturbed (display list interrupts
have problems, IIRC) while the Apple has to "stop" the game,
loads and then continues.

bye
Marcus

I was thinking it might be neat to make a card with co-processor
(6502) that kept prodos in it's own RAM... the MLI could be patched
to JMP to the RAM on the interface card, and there'd be a bunch
more space for programs for Contiki...

Also would be cool to have a spot for plugging in the IPdragon
unit from the Uther card... then TCP/IP could be put on the
card as well, and free up even more RAM...

The CPU on the card could run at high speed, and increase
data transfer rates for disk and ethernet access...

(about the Commodore 1541 and JiffyDOS).
I only briefly ventured into Commodore 128D.
I had a 1541, and it was very slow, cassette
speed it seemed.
I take it JiffyDOS fixed that. What is JiffyDOS?
A cart, or a plug in item? Atari had/has
speedup DOSes and disk formatting, but I
never liked them as I got errors with my drives
with the speed ups.
If we're talking plug in adapters, the Atari had
hard drive interfaces that worked on a parallel
bus at 115Kbaud.

I remember someplace that Wozniak's floppy drive
interface/controller was a major reason Apple][
could be made/sold for the price. ie. Floppy controllers
were very expensive and Woz made one from
cheap parts.
I read the article, sorta, up to page 43 or so.
I don't know the speed of a Apple][floppy,
I do know the basic speed was 10 times faster
than a Commodore 1541. Seems I remember
that the Atari can go about 52K baud, which is
about 5K bytes/sec. The bus speed of an Atari
is 115K cps I think, so that is a limit on its
I/O. The Atari PBI with hard drive interface
goes at about that 115K bit/sec rate, I think.
I'm a hardware wannabe, but not.
Rick Cortese is a hardware man, and maybe
Rick Detlefsen (A8Maestro).
For instance, does Apple][have a serial,
parallel or USB interface disk drive emulator
for the PC? or Mac? Atari has a very useful
interface that allows using a PC for a hard or
floppy drive.

Jack,

A small history lesson for you. Apple II graphics and sound, over the years hardly changed. From when the Apple II was introduced in the late 1970's until the advent of the Apple IIe, the "high resolution graphics" on the Apple II never changed. The only improvement before the introduction of the Apple IIGS in 1986 was the use of "double high resolution" graphics.

As far as the number of games available on the Atari vs the Apple II, I doubt any of us can ever get an exact count. The Apple II did have a head start and technically the 8 bit Apple II's were manufactured much longer than their Atari counterparts. However, in the early to mid 80's, I'm pretty sure that any major game that appeared on the Apple II was also on the Atari. The 8 bit Atari's soon gave way to the Atari 520ST/1040ST and that may have slowed the development of games for the older Atari's in it's later years. You could say that about the 8 Bit Apple II's as well when the IIGS came out.

As far as education went, I remember using the Apple IIe in 1983 or 1984 at school. I was probably in 3rd or 4th grade at the time. I didn't think about the graphics or sound. I was just fascinated with the computer and the programs I could run. Why Apple choose to focus on education, we'll never know (maybe to get an early influence on the kids to buy Apples in the future).

However, it was a sound business decision. The Apple IIe was still in use at my high school through my graduation year (1992) and presumably a few more years after that. That's a solid investment for school's who may have to change machines way more often these days with the way technology changes. Despite the decline of the Apple II in the commercial market in the 90's, the Apple II was still entrenched heavily in education and that came it going longer than the Atari's

and Commodore's.

Right--and virtually every system sold had a floppy
controller and at least one floppy drive.

Not only was the controller very simple, inexpensive
hardware, but the drive was a "gutted" Shugart SA390,
with the complex Shugart logic board replaced by the
very simple Apple analog board.

Making the Apple II completely responsible for control
of the drive reduced the cost of the disk subsystem
substantially--*while significantly improving performance*!

This was a principle that Woz seemed to understand
almost intuitively--and his experience with "algorithmic
state machines" in HP calculators certainly helped.

> goes at about that 115K bit/sec rate, I think.

Any "smart" drive will wind up reading the disk data
into an internal buffer and then transferring the data
to the host computer when requested. This double move
performed by a single processor guarantees that a smart
drive cannot move data at the rate the disk can support.

Most other computer manufacturers seemed to put disk I/O
in the "slow" category, and so did not devote much effort
to speeding up transfers. In the case of the C=64 and
the Ataris, the transfer speed on the link to the computer
was a small fraction of the speed supported by the drives.

Apple drives communicate directly with the disk controller
which communicates directly with the Apple's processor bus.
Data transfers are controlled by software, but it runs at the
speed of the disk, and the bus connection is not a limiter.

The raw speed of a single-density 5.25" drive is 250kBits/sec.
The "standard" single-density encoding required at least 16
bit times per byte of data, so they could support about 15KB/sec.

Commodore and Apple both used Group Code Recording, which uses
fewer "overhead" bits per byte.

Apple 16-sector formats encode 3 bytes of data in 32 bits,
increasing density and speed by a factor of 1.5 compared to
single-density encoding. This is all done in software running
on the Apple II--another piece of Woz' cleverness.

Practical disk speeds will, of course, be affected by many other
factors, including seek and rotational latency and the computer's
ability to sustain data transfers over multiple sectors.

In Apple's DOS 3.3, data was doubly buffered on its way to
memory, cutting transfer speed and requiring sector interleaving
to achieve respectable speeds (still the fastest in the PC world
at the time). With the introduction of ProDOS, the double-buffering
was eliminated and the interleave factor was cut substantially,
providing significantly faster floppy I/O.

> I'm a hardware wannabe, but not.
> Rick Cortese is a hardware man, and maybe

> For instance, does Apple][have a serial,
> parallel or USB interface disk drive emulator
> for the PC? or Mac? Atari has a very useful
> interface that allows using a PC for a hard or
> floppy drive.

Such devices are a "natural" for Commodore and Atari systems,
since they function normally as a drive connected to the computer
by a data link.

They are much more challenging for the Apple II, since the drive
is interactively controlled by the Apple II in real time--and
many copy-protection schemes used this control in novel ways to
achieve their ends. So the only really "compatible" interface
to a Disk][is a real-time faithful emulation of an Apple II
running the actual code that accesses the disk.

Of course, if you are willing to settle for read-only access only
to normally formatted disks, then there are several hardware (and
even one software) solutions for doing so. Read/write access is
more difficult, and access to copy-protected disks is not available,
in general.

Hi,

> I still don't understand why 815 has dual drive in one unit....

Probably because someone at Atari thought i twas a good idea? :-)

I'd have loved to have one, less cables, less clutter, less boxes attached
to my Atari. Great idea, except for the cost (and the poor reliability).

>....815 should have ONE drive, one drive is good enough....

That's a matter of opinion. I always found two floppy drives ESSENTIAL when
I was using my Atari....

> Atari 815 MFM was poor reliable drive....

This as I understood it was why it was dropped so quickly, though I'm sure
other people may know better.

>....Why not 815 use GCR instead of MFM?....

Probably because GCR was a pain to implement, and, in my experience, very
unreliable. All of the standard FDCs available at the time implemented
either FM, MFM or both. There were, to the best of my knowledge, no FDCs
which implemented GCR, which meant far more work for the designers.

>....Commdore and Apple Disk Drive have GCR encoding. They have not
>much problem....

Are you joking? The GCR CBM drives were by far the most unreliable drives
I've *EVER* used! Good riddance to them!

> GCR drives formats the 256 bytes per sector.

So can MFM, in fact 512, 1024 and 2048 byte MFM sectors are not uncommon.
It's a function of the FDC, not the encoding method....

Commodore were actually pretty nice drives from a hardware POV.
Essentially the same type of built in 6502<7> smart box but with built
in power supply instead of wall wart/pig in snake type. They had fast
loaders too like we had Warp and USD.
> that the Atari can go about 52K baud, which is
> about 5K bytes/sec. The bus speed of an Atari
> is 115K cps I think, so that is a limit on its
> I/O.

Right, derived by dividing the system clock down from the 3.57954 mHz
crystal. Goes something like system clock 1.78977 mHz but with a divide
by 16 prescaler to 111.86 kBAUD. We have a POKEY register that can
divide that down further to get our other frequencies. I seem to recall
it is a 16 bit register so we can go pretty slow and accurate the slower
you go. Certainly the 1 mHz 6507 we have in our drives would be pushing
it to do the timing right at 112 kBAUD!

IMO you are ultimately slaved to just what a 6502 can do. Even a RAM
disk is limited to ~25k/sec.

Rick

The speed is the problem of the serial interface. Of course, one can do it even worse than that, see the 1541. As far as the DOS is concerned, I never really got that. At least in the XL series enough ROM space was available, but they used it for supporting future hardware that never saw the light of the day. (Side remark: The atari++ emulator ROM has its DOS exactly there, one could burn this and use it.) Of course, a ROM based DOS would have set the DOS structures in stone.

Problem is with sound. It uses two sound channels for communications, and the other two are only available if you bypass the Os.

So long,
Thomas

The best way to get a picture of the computer gaming market is by
examining very early issues of Computer Gaming World, which are here:

http://cgw.vintagegaming.org/galleries/index.php?year=0&pub=0&id=500

They contain a wealth of data, including game rankings and other
statistics that specifically show what computers their subscribers are
using. For example:

http://www.easyscreens.info/?v=3286

They show that the Apple II utterly dominated computer gaming from
1981 to 1982, ceding some exclusivity in the next couple of years but
still staying the preferred platform. Later issues show that
Commodore ramped up too quickly to let Atari have a shot at
frontrunner status. There was some Apple/Atari overlap, but much of
it was not simultaneous - Apple would be the first release, with Atari
arriving later. Of course, this changed before too long.

As Chris Crawford wrote in the April 1984 issue: "Three years ago,
life was simple: you designed for the Apple, period."

That's just plain silly. Even the stock IEC speed was much faster
than 300bps. When equipped with JiffyDOS the 1541 is capable of
speeds equivalent to the Apple II using ProDOS. With a good protocol
such as JiffyDOS, the IEC bus was not the bottleneck, the drive was.
The 1541 also used a 2mhz 6502 which was very well suited for pulling
data from the drive as fast as the drive could read it, once the IEC
protocol problems were solved it was an extremely fast and effective
drive.

Since the Commodore has been thrown into this discussion by others, I
guess it's fair to point out that Commodore gave you the best of both
worlds: a complete DOS in ROM that is shadowed in RAM (if wanted) as
well as the ability to completely replace the DOS in both the computer
and peripherals if wanted (such as for JiffyDOS).

Actually, Atari jealously guarded the secrets of the chipset in the
400/800 until it was obvious that the system would only survive with
3rd party software support. By then it was too late. Even the Atari
Assembler cartridge comes with horrible documentation that doesn't
even scratch the surface of what you need to create usable software.

IIRC, Apple Oasis has support for this. I seem to recall a disk server
and using floppy images/drives to/from the PC. Been a while though.

The 1541 is many, many times faster than cassette even without any speed ups. Yes, it's slow, but not that slow. JiffyDOS is a ROM solution that replaces the KERNEL ROM in both the computer and the drive. It still uses the IEC bus, but it uses two lines simultaneously for data, thus doubling the theoretical bandwidth of the IEC bus. Unlike the DOSs for Atari, the stock CMD Kernel calls are all intact except for the cassette routines, which honestly aren't used by anyone using JiffyDOS. JiffyDOS provides complete support for the standard CBM DOS commands, so programs that use the normal KERNEL calls and the CBM DOS commands are 100% compatible with JiffyDOS.

They *never* stopped making all info available on the Apple II line.

It was automatically included with the Apple II and II+.

Around the time of the //e (1984+), as the typical user profile shifted
toward "application users" instead of "programmer/enthusiasts", the
provided documentation became more "user manual"-oriented--but full
technical documentation was still available separately.

So for the Apple II, the details and examples were there from the
beginning (the Red Book and the WozPak, for example)--just when
they needed to be there.

I've often said that the Apple II was the last personal computer
for which all the documentation needed to completely understand
its hardware and software weighed less than the machine. ;-)
(The Apple //e shipped into the 1990s.)

When were these manuals published? I ask, because I always
read that De Re Atari was the first publicly available programming
documentation around 1981/2. That would be a cool two years
after the machines were launched - and De Re Atari isn't even a
hardware manual.

Apple started to reduce the level of detail by the time the IIgs was
released (1986). There are no official ROM listings for any part of the
IIgs firmware, nor for the IIc+, but they did publish schematics and
most other technical details.

The second edition of the IIc Technical Reference doesn't contain any
ROM listings (even for the original IIc), but the first edition did have
ROM listsing for the "UniDisk" IIc firmware, and I think I've seen a
supplement which lists at least one other revision.

(None of Apple's published firmware listings include Applesoft BASIC,
since that code is copyrighted by Microsoft.)

I'm not sure what their policy was with the Apple /// and Lisa, but I'm
not aware of any publically available ROM listings or schematics of any
Mac (no point - it wouldn't fit with the general philosophy).

The IIgs certainly wouldn't qualify on that measure. I needed a
moderately large shelf to hold my nearly complete set of IIgs technical
documentation.

Right company, right action, wrong product. It was the 2600 that Atari
kept secret. John Harris cleared this up a while back along with several
other errors that were perpetuated/started by the book Hackers.

I can't recall the exact time line but I think it was within ~6 weeks of
getting his hands on a 800 when the technical reference became available
to him. It was probably fairly late considering the birth of the Atari
computer was sorta 1979, sometime around 1980 or 1981 I think. There
were a few problems with the tech ref, I think it listed OS rev A vs. B
and I'm not sure if it is the CTIA or the later GTIA chip. De Re Atari
was copyright 1981.

BUT all this does make sense to me on at least one level: Atari
patented the custom chips. What happens in the patent process is if you
or someone else releases the information in the patent before it is
granted, the application is denied. The ANTIC creators, Jay Miner Et Al,
were granted the patent in 1981.

Rick

Actually, the limitation is that the patent application must be *filed*
prior to public disclosure.

I think the mid-1980s marks the turning of the "open" tide at Apple,
for numerous reasons related both to market changes and management
changes.

> (None of Apple's published firmware listings include Applesoft BASIC,
> since that code is copyrighted by Microsoft.)

Of course, Applesoft was one of the first things that the community
reverse-engineered and documented, so the fact that Apple was bound
by licensing agreements did not seriously hamper its exploitation.

> I'm not sure what their policy was with the Apple /// and Lisa, but I'm
> not aware of any publically available ROM listings or schematics of any
> Mac (no point - it wouldn't fit with the general philosophy).

Both were extremely "closed" in comparison the the Apple II.

The Apple /// was apparently kept closed in the mistaken hope that
it would encorage only "legitimate" developers of "business" apps,
as opposed to the free-for-all in the Apple II world.

So much for that idea...

As it turns out, volume is volume. ;-)

Mines of Titan/Mars Saga was available for Apple II and PC/ C64. It should be available for Atari, Atari graphics look great and colorful! but actually not available for Atari. Any reason?

Thanks! Jack

AFAIK the US is unique: you can file a US patent application up to one
year AFTER the "public disclosure". And also selling the patented object
starts the clock even without any publications.

-Alex who is NOT a lawyer.

I have two friends that are patent lawyers, well one died on me recently, and they have both told me otherwise. More along the lines of the patent *is* the disclosure that you are getting exclusive rights because of. Once any public disclosure is made, the patent office well see no need to give you any rights to reveal how you did something.

It was/is a bit of a problem because of the "Publish or Perish" and trying to drum up business by telling other companies about the latest greatest you just came up with. We could cover some problems with non disclosure agreements but we still couldn't let info out into a public forum.

Rick

Yep, that's my understanding of US law, too, which allows even more
lead time to get documentation out (if you're confident of your
filing schedule).

And you only have to "offer" something for sale that is described
as incorporating the patented IP to start the clock.

Not so, assuming he was talking about the US.

In most countries, publication closes the door to application, but
in the US it starts a 1 year clock.

> It was/is a bit of a problem because of the "Publish or Perish" and
> trying to drum up business by telling other companies about the latest

And even nondisclosure is no good if you are trying to make a sale!
Revealing any of the IP in an effort to commercially advance the
invention starts the US clock--one year to file.

In any case, the point is that US patent considerations are not in
any way affected by revealing the details of an object already being
sold. Offering it for sale *is* publication--as any reverse-engineer
will attest. ;-)

Hi, I'm Ben Smith here in Portland, Oregon USA! Proprietor of Bravo Sierra Computers! Occupying a unique niche in the Atari World! Most Atari Dealers sell NEW, I also sell Used Atari Goods! Not only do I sell NEW Atari Goods at a competitive price, I also sell used Atari Goods you wont find at Swap Meets, Thrift Stores or Auction Sites! And I sell for less! Unlike those remaining anonymous! I test Goods before I sell them. Not only can I sell you some Great New stuff! I can also sell you hard to find 2nd Hand Goods, because I'm the guy people goto to give Ataris a New Home! Saving Orphaned Atari's from Oblivion!Goto http://BensCatalogs.Atari.org or (503)256-9974!

I've got a fast turnaround rate. Usually, Once I receive payment your order goes out the same day. Customers love the speedy service! I have lots of Atari SoftWare & Books. Which I can send by Media Mail Rate!

Please Direct all Replies Through E-Mail to: BenSells@Atari.org or Atari@aracnet.com. If you can't reach me, see my info at the Bottom!

Atari 8 Bit and ST Games/Software, Hardware/Accessories and Books/References!

1966. Introducing The Vintage Computer and Gaming Marketplace

Newsgroup: comp.sys.atari.8bit
Date: 2008-04-17 14:33:37 UTC
From: vcgm.groups@gmail.com
Message-ID: <45db0733-f3eb-4db9-a1d7-87021764fa60@l42g2000hsc.googlegroups.com>
Source record: 3455

Hello,

I'd like to formally announce the new Vintage Computer and Gaming
Marketplace located at <http://marketplace.vintage-computer.com>.
There's some Atari stuff on there now!

This new addition to <http://www.Vintage-Computer.com> will hopefully
grow to become the preferred venue for buying and selling vintage
computing and gaming gear on the net.

The software used for the marketplace was chosen for its simplicity
and features which make it a viable alternative to the other, more
generalized, auction and sales venues on the web.

Items can be posted in auction format (buy-it-now can be used for flat-
rate sales) with descriptions and a photo gallery for each. Bids on
items within the last two minutes of an auction will extend that
auction by 30 minutes, making sniping a thing of the past.

NOTE: There are absolutely no charges for posting listings to the
marketplace or for buying items listed there. The venue is completely
free!

I believe that the popularity of the Vintage Computer Forums and the
Vintage-Computer.com site will help drive buyers and sellers to the
new marketplace to the benefit of the entire vintage computing and
gaming community.

I encourage anyone interested or potentially interested in buying or
selling vintage computing and/or gaming gear to please visit the new
site, sign up and, by all means, tell your friends!

Thank you,

_____

I can't help.
I remember something about remote.com.
You have to access the PC hard drive with
some remote command, and I can't find it.
Seems like you type D0: or something like that
to access the PC hard drive. The remote commands
are the same as the APE DOS key commands.
Can't find an APE manual. I remember spider and
didn't and don't know what it means.
There may be manuals at atarimax.com.
I do know some features on the shareware version
are disabled, you have to buy it to get them.

We are talking about the USA.

You obviously have a misconception about the language used.

From the US Patent/trademark web page
http://www.uspto.gov/web/offices/pac/doc/general/index.html#patent

In order for an invention to be patentable it must be new as defined in
the patent law, which provides that an invention cannot be patented if:
ï¿½(a) the invention was known or used by others in this country, or
patented or described in a printed publication in this or a foreign
country, before the invention thereof by the applicant for patent,ï¿½ or
ï¿½(b) the invention was patented or described in a printed publication in
this or a foreign country or in public use or on sale in this country
more than one year prior to the application for patent in the United
States . . .ï¿½

>
> In most countries, publication closes the door to application, but
> in the US it starts a 1 year clock.

No. It is either [described]<immediate grounds for not granting>, [in public use]<immediate grounds for not granting>, *OR* [*SOLD*... for a year].

There is a provisional type patent that you have to file if you want to go to other parties. I have an acquaintance who didn't do this and took engineering drawings to a machine shop to have one of his inventions made. The machine shop stole/patented his device and he didn't have the documentation to prove it. I think I recall the time limit on these as being one year before you have to renew it or file the real patent, but this is just considered round one of the process.

<snipped part that should stand corrected now>

Rick

The original MAC had very limited HW expansion capabilities. Access to
the HW was through Apple supplied drivers. Almost no HW documenation
was needed. The software was a modern design that relied on API's.
The combination was intended to provide Apple with the opportunity to
update SW and HW without having to worry about breaking existing
applications. They only needed to support legacy APIs. A lot of this
was driven by the trouble Apple had in maintaining backward
compatibility in the II series. There were litterally dozens of "well
known" routines in the Apple II ROM that had to stay at a specific
address or any number of applications would break.

The original "Inside Macintosh" documentation for these APIs was
extremely well done. Basically the "Inside Macintosh" documentation set
the state of the art for technical documention. There was no need for
ROM listings, and in fact ROM listings would have enabled software
engineers to bypass the APIs and create all kinds of problems with
backward compatibility for future generation machines.

Time would prove that the closed system concept had some merit as can be
seen by the success of the I-MAC line. However the original

implementation, without SCSI, USB and Firewire technology, was way too
restrictive.

> restrictive.

I certainly agree that there are wonderful benefits to a strong
architectural interface, as opposed to a "free-for-all" ROM listing
and schematic!
```

But, given the state of the art in the late-1970s-to-mid 1980s, it was more important to throw open the doors and windows and see what came of it than to presume that one had intuitively arrived at the proper set of functionality and restrict users' creativity.

The result was a wonderful blooming of hardware and software advances for personal computers--and more importantly, a bloom of visions of what personal computing could become (besides storing recipes and printing mailing lists ;-).

As is to be expected in the rhythm of things, the period of carefree experimentation was followed by a period of dying off of virtually all early "dead end" platforms and consolidation on a (slightly) newer but evolvable standard that permitted the growth of a huge market in PCs.

Today we live on the high plateau attained by the creative momentum from that volatile, expansive era--but a plateau nonetheless, constrained by the many standards and complexities that enable the market.

As evolution continues, we can expect another revolution in computing, in which the PC platform will play the role of the rigid mainframe in the previous scenario, and new visions will emerge to reseed creativity and make our "high plateau" seem like a valley.

The average life of a plateau seems to be 20-40 years, so it might be soon. ;-) Of course, we don't have a sequel to Moore's "Law" to power the engines this time--though perhaps massive parallelism might be enough to do the trick...

1972. APE 'Remote" Software Question

Newsgroup: comp.sys.atari.8bit
Date: 2008-04-17 22:52:11 UTC
From: Mr Nukem <mrnukem@gmail.com>
Message-ID: <40079b41-94ab-4980-b336-49bb5213d577@c65g2000hsa.googlegroups.com>
Source record: 3460

I posted this in the atariage forums but thought I would post here as well...

I am using APE with SIO2PC cable which is working great but I want to be able to load .ATR disk images from my Atari 800XL. When I load APE for Windows and Load the APE Warp .ATR disk image that comes with APE I run a program called Remote.com on the Atari end. But it will not let me browse directory or load disk images. When use the (L)oad image it asks me if I want to use the find or spider feature. The find feature searches for anything I put in. The Spider feature does nothing when I type anything in.

If I use the Mirror feature on APE for Windows and leave it blank on the windows end it works just fine on the Atari side for letting me browse to my directory with raw Binary files and load them.

Hope all this makes sense. I really want to be able to use my Atari without having to interact with my Windows System after APE for Windows is loaded.

All the links to documentation on the Atarimax web site give a 404 page not found error. I purchased the cable from there and downloaded APE but there was no documentation in the download archive.

Thanks!

There you have it--exactly as I was saying!

Obviously publication cannot preceed the *invention* (unless you were
perhaps publishing about a time machine ;-), but it can precede the
patent application by one year.

>> In most countries, publication closes the door to application, but
>> in the US it starts a 1 year clock.
>
>
> No. It is either [described]<immediate grounds for not granting>, [in
> public use]<immediate grounds for not granting>, *OR* [*SOLD*... for a
> year].

Remember, we're talking about publication *by the inventor*, so there's
no issue about the invention not being novel as a consequence of the
publication.

Clearly if someone *other* than the inventor published the invention
prior to the "inventor" filing, that would bar the patent, since the
filer did not invent anything novel. This has no bearing on publication
by the actual inventor or his agent.

Are you just the kind of ego who can't admit when he is wrong? It could be a problem with your reading comprehension but I seriously doubt you bothered reading the post from US Patent Office.

You still don't know what a patent is. Ignorance is curable but I am afraid you kind of stupidity is forever. Even when confronted with the official US Patent office release on what can be patented, you still persist.

I kind of want to ask just what makes you think that you know better then a guy who spent 35 years in R&D, two patent lawyers with a combined 80 years of experience, and the official web page of the US Patent Office but I am afraid you may answer.

I give you on you.

PLONK!

I see it as a problem with legaleze.
I can't understand the US Patent office statement.
And I can't really understand the argument here.
There was a guy who could make glass flowers
like no-one else. They were beautiful. People
wanted him to patent it so they could find out
how he did it. He didn't patent it. It increased
the value of his work before and after he died.
So, the moral is, don't patent stuff that can't
be reverse engineered, it doesn't do you any
good.

My copy of the Apple IIe Technical Reference Manual is dated 1987, and I
think volume 3 of the IIGS toolbox reference came along some time after
that.

The programming info, schematics, etc. were dropped from the owner's manuals
that shipped with later Apple II equipment (the Super Serial Card manual,
for instance was printed in two forms: the original edition, which looked
like it was printed with a daisy-wheel printer and included source code for
the ROMs and a schematic, and a "lobotomized" edition, which looked like it
was typeset on a Mac with a laser printer and had little more than
installation instructions and maybe some simple programming info), but it
was usually still available in the tech references.

Go to www.vintagetechnology.co.uk to download latest issue (May '08).
Only £0.99p / $1.99 for a 40+ page magazine devoted to the collection,
preservation and history of all aspects of digital and electronics
technology, including computers, arcade games, calculators, led
watches, phones, appliances, gadgets, robots, radio, audio and tv.

This issue features:

Old-school computer learning
Will my vintage electronics collection still work in 100 years time?
Flight sims - flying with home computers
Defender - the thinking man's arcade shoot-em up
Commodore PET computers
Early modems in the US & UK
Tomy handheld electronic games
Vintage LED clocks
Learn about maths the vintage way
Vintage voice recorders
First 'personal' radios
Interview with Richard Hanson - Superior Software founder
Repairing handheld games
HP calculator memories

Plus sections on museums & collections, latest events & news and book
review.

VTM aims to explore the legacy of recent past technology, explore new
‘electronica' which could become or already is collectible, be an
enjoyable resource for collectors & historians and celebrate the
history and personalities surrounding this subject.

What you accuse me of seems to apply perfectly to yourself.

You try reading your quote again:

"In order for an invention to be patentable it must be new as defined in
the patent law, which provides that an invention cannot be patented if:
ï¿½(a) the invention was known or used by others in this country, or
patented or described in a printed publication in this or a foreign
country, before the invention thereof by the applicant for patent,ï¿½ or
ï¿½(b) the invention was patented or described in a printed publication in

this or a foreign country or in public use or on sale in this country
more than one year prior to the application for patent in the United
States . . .ï¿½

In (a), publication may not occur "before the *invention* thereof",
not before the application.

In (b), publication, sale, etc. must not occur "more than one year
prior to the *application* for patent".

It's really not that hard.

I must say, I've actually found this thread very interesting. It's one of the few platform comparison discussions that isn't "My platform is great and yours sucks and was created by incompetent low lifes."

Reasonably objective comparisons of these classic platforms, taking into account the strengths and limitations of each, and the differences of when they were designed (something few people seem to account for), could actually strengthen the appreciation of all of them.

I largely agree with you about the utility of patents--a very
mixed bag.

The discussion here had to do with someone proposing that the
Atari technical details were not released with the machine because
of patent concerns--a position clearly not justified by law.

Russ, a patent grants you rights in exchange for ~telling the secret. If you have already told people how to do the trick, i.e. published, it isn't a secret anymore is it?

The gist of Sphincter Boy's argument is he thinks you can pantent something after been published/become common knowledge. He could not be more wrong.

He is just a troll, ignore him and his BS. I killfiled him already and I can safely say he nothing intelligent to offer on the topic.

Steady on there Rick. I hope this isn't how you converse face-to-face.

I count at least 11 patents from Michael's career at HP & Burroughs.

Cheers,
Nick.

He couldn't be more wrong about this. Remember the topic and the
position that Atari was secreting information which resulted in it being
less successful.

John Harris in a post to comp.sys.atari.8bit July 1993 snipped to the
pertainent part.
****
It took me a long time, about 6 months after I got it, to read the book.
Mostly because others who read it first said I wouldn't be very thrilled by
what got written. I was dissappointed. Steve Levy spent a lot of time
with me and the other programmers at On-Line, took notes, and absolutely
new the real stories. Why do journelists need to rewrite things to make
the story more interesting? If they're going to make it up anyway, why go
to the trouble and expense to gather real data?

While I did disassemble Super-Breakout and BasketBall, and discover PMG and some other machine secrets, bootleg copies of the Harware manuals showed up just a few months later. It was a strange because I thought I had information that no one else was going to know, and could use it to really have an edge in 3rd party Atari games. I couldn't help but feel disappointed that my 'edge' was taken away. Of course, that didn't last too long, because there was a whole world inside those manuals that I never would have found. After reading them, I was very happy to have that info available for myself, and everyone else. Instead, Levy told the story of the 'Wonder Boy' who figured it all out on his own.
****

I pointed out he was correct about the 2600. I and others said he was wrong about the Atari computers. He's been nitpicking ever since. BTW: I just looked at my technical reference and it is copyrighted 1982.

While that is wonderful for him and I am sure he is a bright guy, the way he drifted the thread was masterful, it means nothing in this debate. IMO: The only thing that does matter is John Harris and what he experienced since he was the one given credit for reverse engineering the Atari. You will find a quote from one of his posts in the reply I made to Charlie below.

John also had some comments on the topic of relative success of the Apple II vs. Atari 800 elsewhere. IIRC he blamed it on marketing not wanting to ~ruin the image of the Atari as a game machine. This obviously helped kill it in education and business. IMO it was dead in the water with respect to business anyway. Those were the days of "Nobody ever gets fired for buying an IBM."

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

Just to go entirely off-topic, this isn't quite right as the Commodore PET/CBM drives had two 6502s in interleaved operation, one for talking to the host computer and one for talking to the actual drive hardware. Those drives were reasonably fast though expensive.

But then when they ported their DOS code to a single-CPU design for the cheaper home computer line they kept this logic around (one CPU now alternately impersonating the two CPUs of the old design), which made the DOS really weird (the two "personalities" didn't simply call each other as needed but rather communicated via command lists in RAM) and contributed to its slowness.

I'm impressed! I would have expected a little more cost-cutting
than that. ;-)

Remember, the original PET, had the IEEE-488 bus for expansion, aka GPIB. A parallel bus that allowed multiple devices. WHen the PET came along, it was basically the cheapest computer that had the bus, which I seem to recall got it a lot of attention in labs and such that had peripheral equipment like test equipment that had the bus and suddenly they could buy cheap computers to control the equipment.

So presumably it was worth spending money on the drives that connected via that bus. I seem to recall they were expensive, though on the other hand given one main reason the 6502 saw a lot of use in those all in one computers was because it cost $20 in single quantities, a second 6502 likely didn't add that much to the cost.

Remember, the C-64 drives that were previously discussed used a serial bus, which slowed things down considerably. A parallel transfer would make a big difference.

And Commodore owned MOS so they surely got the chips
a bit cheaper anyway.

Another cross post with nothing to contribute.

Did you even read the web page you cite?

"This time line applies to utility patents filed in 2001 or later, and assumes that you will start with a"

We are talking about 1979-1982. Patent law has changed since then. You can even patent plants now for the first time in 200 years. Once more, this is BS drift that just clouds the issue of relative discussion of the two platforms. If you want to talk patent law not specific to the computers in question, go to alt.patents or something. I would say take it to email if you have anything about it to say to me, but I am pretty sure the kill file you are now going in will delete those.

Did you even check my reply to Charlie quoting John Harris? John is the person given credit in the popular press with reverse engineering the Atari computers and *HE* says it didn't happen. He says he had the manual just like a number of people here said was available.

On one of your points, yes, I am wrong a lot and I admit it. The problem here is: I am not wrong this time and a couple of people are being intellectually dishonest in trying to bully a 'win'.

Your opinion is of no consequence to me. People in comp.sys.Atari.8bit have known me for close to 20 years and some of my most frequently used expressions are "Thanks for the correction", "I stand corrected", and "IIRC". I seriously doubt standing up for what is the correct and shared view by most people in the group is going to change their view. But heck, you an Michael have done a pretty good job of rewriting history so far so who knows?

Seems like the C=64 has a fixed screen memory,
and you're poking into that memory.
That can be done on the Atari. The Atari screen
memory can be moved, as can the display list,
which is a small program for the graphics chip
to execute.

...while here in comp.sys.apple2, most of us don't know you from Adam.
Whatever you might happen to know on any given topic is largely nullified by
your arrogant, condescending attitude. Maybe Atari users find that
acceptable; I would hope not, but since I haven't used one of those since
1986, I wouldn't know. I think I'm fairly safe in saying it won't get you
far at all among Apple II users.

Maybe this opinion, like the others further up-thread, is also "of no
consequence" to you. The reverse is rapidly becoming true, and you have
only yourself to blame.

(WTF is it with other 8-bitters coming in here and trash-talking everybody
and everything in sight lately? First it was the Aztec C vs. cc65 thread
instigated by a Commodore user; now it's this. I would've thought the Apple
vs. Atari vs. Commodore "wars" were long since ended, and not in anyone's
favor. I could make reference to my posting history in comp.sys.apple2, but
I have better things to do with my time than to get sucked into a Usenet
d*ck-size contest.)

I'm starting to see other peoples' point about participating in an unmoderated newsgroup. Of course most of the web pages and moderated newsgroups I have seen usually have a clique in place with 4 or 5 butt buddies you can't disagree with or correct. They end up being just as frustrating.

Perhaps I shouldn't be this insecure but I actually went down to my basement to check the copyright dates on both my Atari 800/400 technical reference manual and De Re Atari. I realize probably half the group owns these and they would have pointed out I was wrong had I been.

While I do have a pretty good memory, I mean I remembered the Harris post to the newsgroup from 15 years ago, there are a few shorts in there. For some reason I keep wanting to call John Harris, James Harris. I figure it is combining John with James Hague. I even went to the trouble of looking up details about that cold fusion fiasco to be sure I had some pertinent details right. While I couldn't remember the names involved<Ponds Fleischman?> I did remember correctly that within something like 3 days of publication protection a MIT faculty member<?> filed a patent on it. I also seem to recall a different MIT administrator about a month later apologizing for it after the fact. I think that had more to do with cold fusion not panning out then the patent filing. If it cold fusion had panned out and MIT got billions of dollars in royalties, that guy would be a department head by now.

That's just the way things worked. The old Elisha Grey being beat to the patent office by Bell thing which I have heard is part myth. Right, why didn't they just publish it to establish priority!<grin>

But I grow tired. Bill Wilkinson countered the same 'secret' argument years ago too. You would think that someone who helped write the OS<FP routines anyway>, Atari BASIC, and the books "Inside Atari Basic" and "Inside Atari DOS" would carry more weight. I think he may have made these comments on a BBS back in the 80s so it may not turn up on google.

Which brings me to the punch line: I'm sure much to everyones' relief I don't subscribe to the appleII group and have proceeded to add apple to my newsgroup filters. I know this will mean if someone develops an Atari controlled apple peeler or says their Atari is 'the apple of my eye' it will not be heard by myself. If someone wants to ask me programming my Atari under the apple tree in my yard, I am sorry won't see it. No great loss. Just wasting to much time arguing with idiots instead of doing something fun.

Rick

Thomas Richter <thor@math.tu-berlin.de> wrote in news:

> I afraid so. The c64 had no graphic support in its rather limited basic.

That's because it used a BASIC originally written for the PET, a machine with no sound or actual graphics. To draw an orange line (like in your example) on the C64, you'd have to do this:

```
5 ba=8192:poke53272,peek(53272)or8
10 poke53265,peek(53265)or32
20 fori=batoba+7999:pokei,0:next
30 fori=1024to2023:pokei,128:next
40 pokeba,128:pokeba+1,64
50 pokeba+2,32:pokeba+3,16
60 end
```

This just draws a few pixels in the upper left corner of the screen, but should give you an idea of what's involved.

No idea if it was true or not but I was told back then that those big PET double floppies in the steel case could copy anything as they did a bit level copy of the source disk no matter what format/type it was and thus managed things even Happy drives failed at.

You can set the frame buffer of the C64 to various locations.
Page flipping is possible, of course.

> That can be done on the Atari. The Atari screen
> memory can be moved, as can the display list,
> which is a small program for the graphics chip
> to execute.

That's right - and funny things are possible with these display
lists: The start of the frame buffer can be set for each line -
organizing the frame buffer "backwards" in memory, a different
video mode for each line, a horizontal display interrupt on each
line (if one can spare the CPU cycles ;-) and so on.
It's apparently even possible to change the video mode mid-line!

The power of ANTIC (the video processor) was astonishing for
its time.

But the C64 has one single feature that is much more practical
for many applications:
The 1KB large "Color RAM" area which allows for two independent
colors for each character block (40x25 matrix) - even in high
res mode.
This not only gives you colored text but a good compromise
between colors and resolution whereas the Atari either can't
utilize that many colors on a single line or has a lower resolution.

Nope. The video memory on the C64 can be moved all over the place. In this example, the video bank is at $0000-$3FFF (the default setting). We're using bitmap graphics here, where the pixel data resides at $2000-$3FFF and the color data at $0400-$07E7.

Greetings,

I need a working 410 program recorder for
the Atari 400/800/XL/XE.
The one I have is bad and I need to extract some
info from some Cassette Tapes.

If you happen to have one not needed, I will
pay shipping for it and maybe a little cash or
a 8-bit program or something.

E-mail me with your info
at: phantomm@suddenlink.net

Thanks,

.

Of course, Rick won't see this reply, since he's in the corner with his
fingers in his ears going "La, la, la..." (that's what a killfile is,
after all), but...

US patent law in this area (publication by author as a bar to
application) has *not* changed.

I frequently used this provision of law to determine what I could
say to customers and when I could say it--with advice of counsel,
of course. It also determined when we filed international applications,
since *their* rules are "no window".

I used to subscribe to comp.sys.atari.8bit, until I was basically
jumped by them just for voicing an opinion.
I much prefer the Apple crowd, even though the computer that shares my
desktop with my Mac is a TI-99.

This group has been a source of inspiration. There is a lot going on here. And less in-fighting. I also enjoy hanging out on comp.sys.cbm, even though there is more in-fighting there.

MSXers seem to share some of the less desirable traits with the Atarians as well...

2005. cc65 2.12.0 released

Newsgroup: comp.sys.atari.8bit
Date: 2008-04-22 16:40:09 UTC
From: uz@spamtrap.musoftware.de
Message-ID: <ful4d9pmf1@moppi.musoftware.de>
Source record: 3494
Cross-posted to: comp.sys.cbm,comp.sys.apple2.programmer,comp.sys.atari.8bit,comp.sys.oric

I'm proud to announce version 2.12.0 of cc65. cc65 is a complete cross development package for 65(C)02 systems, including a powerful macro assembler, a C compiler, linker, librarian and several other tools.

cc65 has C and runtime library support for many of the old 6502 machines, including

- The Commodore VIC20, C16/C116, C64, C128, C116, Plus/4, 510 (aka P500), the 600/700 family and newer PET machines (not 2001).

- The Apple][and successors.

- The Atari 8 bit machines.

- GEOS for the C64 and C128.

- The Nintendo Entertainment System (NES).

- The Supervision console.

- The Oric Atmos.

- The Lynx Console.

The libraries are fairly portable, so creating a version for other 6502s shouldn't be too much work.

This is mostly a bugfix release, with larger changes in just a few places. The latter is especially true for the Apple][libraries, which have undergone major changes done by Oliver Schmidt.

As usual I will provide the complete sources and several binary packages, including RPMs for RedHat Enterprise Linux 5. Please note that there are separate RPMs for the compiler proper, the docs, and the target specific libraries. To develop for one of the predefined target systems you need the compiler RPM package *and* one of the target machine packages. Be sure to download the documentation package if you're new to cc65.

Precompiled binaries for DOS, OS/2 and Windows are available in ZIP archives. As with the RPM packages, you need the package for the development system (Windows or whatever.) *and* one or more of the target machine packages, plus optionally the doc package.

There's also a windows installer package. The target specific libraries and header files are selectable as components from within the installer dialogue.

All packages are available from the MU software FTP server:

ftp://ftp.musoftware.de/pub/uz/cc65/

More information on cc65 can be found on the cc65 web page at

http://www.cc65.org/

There is also a mailing list for discussing cc65 related issues (programming, suggestions, bugs, ...). See

http://www.cc65.org/#List

for information on how to subscribe to this list.

While I'm the main developer of cc65, it is actually a joint effort. I would like to thank the target library developers, all the people on the cc65 mailing list, all those sending suggestions and feedback, and even those bugging me for a new stable release:-) The CREDITS file is probably incomplete, but you know who you are.

Thank you!

Uz

Funny that you'd bring up the TI-99/4A, as discussion around those (mostly
on a Yahoo mailing list, not so much on Usenet) also tends to stay fairly
civil IME.

(One of those was my first computer. With only 16K, no printer, no disk,
and an expensive upgrade path to get to those, it was sidelined after a
couple of years by a better-equipped IIe. I no longer have my original
99/4A, but I picked one up cheap on eBay a few years ago, along with a PEB
with a floppy drive, serial port, and 32K RAM expansion. It's set up on one
desk, and my stealth IIGS (upgraded from the aforementioned IIe) is set up
next to it on another desk.)

From what I can tell by reading old c.s.a2 posts, the Apple][crowd had its period of in-fighting in the late 90's in which several high profile (and somewhat controversial) figures left the Apple][scene forever.

I would like to think that those who weathered the storm in the 90's, in addition to those returning (or joining) the Apple][community, are much more mature and less prone to the kinds of erratic behaviour exhibited by the individuals in question, and that we can have discussions that don't dissolve into purile p1ssing contests. ;-)

As Dirty Harry once said, "Opinions are like @ssholes; everybody's got one."

BTW, please pardon my purile language. ;-)

Cheers,
Mike

The focus here is incredible. csa2 is way too concerned about
creating, discovering, tinkering, and exchanging information to be in
the same galaxy as caring about childish system wars or other Internet
drama - in the best tradition of the old regional Apple II user
groups. :) It is, appropriately enough, the polar opposite of a
typical Mac forum.

Umm - yes, you are absolutely right!

I joined a Mac forum back when I got my mini a year ago, and left
frustrated a few months later. A lot of that same "my computer is
better than yours" between Mac and PC types drove me away...

I assure you Sir, no 'bullying' is taking place. The conclusion
Michael has drawn is supported by the available information, and yours
is falsified. If you care to bring new information to the fore that
supports a different position, you'll find that the majority here will
be happy to listen. If instead you present indignant denial and a
series of infantile personal attacks, you will no doubt receive
nothing but contempt.

One of the things that makes this forum great (indeed, much of this
thread is a testament to it) is that egotistical ad hominem sabre
rattling is mostly lost in the noise. In its place you'll find
respectful (if sometimes heated!) discussion which will derive what is
correct not through authoritarianism, but through reason.

If you're content to operate within the aforementioned guidelines, I
look forward to your contributions. If not, well, at least the
rebuttals will be moderately entertaining.

Good day,

Matt

That's the problem of trying to argue an issue based in 1980, using laws from 2008 :)

But getting back to the earlier topic of Atari tech documentation, it's well known that the architecture of the Atari 8-bits were *very* closed the first year or 2. Nolan Bushnell speaks of how he was opposed to this approach by Warner management, in the "Stella At 20" documentary, and why the closed arch. was the reason why major software titles like VisiCalc appeared on the Apple II first. Owen Rubin has also publicly talked about the first time he got an Atari 800 (while working at Atari), and how he received no tech docs for it (because they hadn't been written yet!). Until the book, De Re Atari, there was very little info.

I think after the courts ruled in Activision's favor (regarding 3rd-party software for the VCS), they realized it was impossible to keep the software market all to themselves. Whether or not they realized that 3rd-party software only helped hardware sales, I don't know (but I doubt it since the 7800 and later systems used software encryption), but the correct approach had to be forced upon them. Nintendo actually succeeded in locking out 3-rd party software (except for "rogue" companies who circumvented the lockout chip, like.... Tengen/Atari! Maybe they did finally understand it. lol).

Yep, it is plain silly that CBM chose such a slow speed. But was THAT slow!

If you happen to check the following web page:
http://www.viceteam.org/plain/drive_info.txt You'll see that the 1541
transferred data at a hideously nippy 0.4KB per second....

>....When equipped with JiffyDOS....

Totally irrelevant, the majority of users didn't use such upgrades and were
stuck with "stock" speeds.

>in the 400/800 until it was obvious that the system would only
>survive with 3rd party software support....

The technical reference manuals were available pretty early on, in the UK at least (though we got the machines a couple of years after the US). On top of that they even went to the trouble of creating the "Atari Program Exchange" (APX) to encourage the creation and distribution of user generated software.

Plainly the actions of a company "jealously guarding" it's secrets.

The technical details of their consoles (VCS/7800/Jaguar) were always kept secret, but the micros were "open books".

Some of us actually lived through those years....

>....Even the Atari Assembler cartridge comes with horrible
>documentation that doesn't even scratch the surface of what
>you need to create usable software.

First piece of software I bought for my Atari....

The documentation assumes you have the technical reference manuals, and as such is more than sufficient for its intended audience. I certainly had no trouble with it!

Yes. As Ensor says it's hideous. It's more like a tape recorder
without the need to spool to the sections to load from.

Without a fast loader you can literally *see* the bytes being
transfered.
With a fastloader the thing is quite usable.

Of course, that's an actual big step up. Having to find the start of a program on a cassette was as much a problem as the slow loading. I used ten minute cassettes, and kept one important program on each (maybe a backup later on the tape), but I gather most people used 30 minute or longer tapes and multiple programs per cassette, making the search issue worse.

So having direct access to files with a disk drive actually is a big improvement. Slow transfer only counts once you've had something better. Which is the same thing with cassettes; I don't recall them being much of a problem other than finding the start of the program, but the minute I got a floppy drive in 1984 I never wanted to use cassettes again for programs.

There was one early commercial floppy drive system, and it was treated as a faster cassette system. They didn't bother with a real operating system, which made it easier to adapt the system to multiple computer types, so you saved at a specific location on the floppy, and when loading had to specify where it started (and maybe ended, I can't remember). At the time, at least thirty years ago, it was still better than cassettes.

Body handling: HTML body converted to readable text

The way I read it, 65527 is all you need to look at.

In the 400/800, possible values and meanings are:
221 = OS Rev. A NTSC
214 = OS Rev. A PAL
243 = OS Rev. B NTSC
34 = OS Rev. B PAL

In XL/XE systems, the value returned is the actual OS Revision number.
(that is, 10, 11, 1, 2, 3, or 4)

For non-sequential data access inside files a tape isn't too
useful, either.

> Slow transfer only counts once you've had something better.

Of course - but the thing was nearly as expensive a a C64 in
some countries. And for that kind of money I would *at least*
expect the speed of the Atari 8-bit computer's floppy drive
which gets the job done, too, but isn't exactly a speed demon.

> Which is the same thing with cassettes; I don't recall them

Totally understandable and most people interested in a "real"
computer used floppies sooner or later.
What I really find funny though, is that there are several "turbo
tape" solutions for the C64 out there that give the user higher
speeds than a (standard) floppy drive ;-)

Same with Germany. I saw the 400 and 800 models in shops
around 1981 - but I'm not sure that this is the earliest date
they were available. I got my 400 in March or April 1983 and
getting to know the machine took quite some time as I didn't
have the funds to buy many books back then. Especially not
from overseas as having a "personal computer" was still a
new thing in Germany at that time and German books were
just beginning to arrive on the shelves.
The C64 really accelerated things here and a plethora of
books were made available - surprisingly having a good effect
on books for other computers, too!

> On top of that they even went to the trouble of creating the

When did they establish APX? The earliest game I found
(the well known Eastern Front 1941) is from 1981 - same
date as De Re Atari, which was mostly written by the same
author (Chris Crawford) and contains some "free advertising"
for the game ;-)

> The technical details of their consoles (VCS/7800/Jaguar)

The discussion was about *when* the books got opened,
not *if* the books got opened.

The Atari stock floppy went about 19200 baud, was
capable to 50K baud with some drives and DOSes.
I never had much luck with the faster situations, got
errors, standard speed was pretty reliable.

What was the Apple][rate?

Under ProDOS, after factoring out the drive startup
and file open time (about 0.8 sec), the file transfer
rate in my experiments was about 7.7KBytes/second for
reads.

I haven't done similar experiments for DOS 3.3, but
I would expect it to be a little less than half that.

For a couple of years, and lots of software development, I used C60
cassettes, and a recorder with a tape counter. I always reset the
counter at the beginning of a tape, and faithfully logged the start
of each program saved on a paper "directory".

This made it quite natural to save "generations" of a program under
development so that the latest version was always at the end of the
used tape.

I never had any of the problems that others describe in using cassette
storage, which I attribute to finding a good volume setting and always
using the same cassette deck.

I modified the deck so that I could always faintly hear what was being
played back or recorded through the speaker, providing good cues for
activity and making it easy to confirm the tape positioning.

This was all using an Apple][+ computer, so the tape starts and stops
were manual,

Hi,

What did Oliver do to improve the Apple II libraries?

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

From: atarixle <atarixle@12move.de>
Message-ID: <fviobs$e6t$1@online.de>
Source record: 3275

What is the most common russian standard font on our little 8-Bit-machine?

I want to translate my GUI to russian, and I don't want to create my own standard for that, if our russian 8-Bit-friends have already one.

Is there a standard-font available?

gtx.

http://www.langesite.com/Atari/Holmes/Holmes%202/Media/Fonts/

You can find 'CYRIL.FNT' in Holmes archive.

I believe it is the one published in Antic, 1988

This is a computer custom font, not a printer font.

Our Polish friends may have a better one.

I want to point out that all of the cartridge auctions are eligible
for combined shipping at a flat rate of $2.95 per additional cartridge.

FamilyNet International Newsgate

Well, was making the rounds tonight and I caught up on 200 messages her on the newsgroup. First off, good to see this place still plugging along. On another note, man... so many messages comparing the Atari to the Apple 2. Wow... who cares!?

Go with your bliss, I think that is what was told me early on in getting into the retro computing stuff.

For me the bliss is the Atari 800. I gave away all my ST stuff tonight, just decided after a while of fun tinkering with that ... if I had to mess with a retro machine, mught as well go as far back as I can and still have grpahics and sound. :D

So who here has tried out the Prison Board BBS? A lot of people are saying how they enjoy getting on with a real Atari 300/1200 baud modem. I am so happy to hear that. The sysop has worked hard to make that BBS retro friendly and to keep the Atari BBS list up to date. And again he added a nice feature... when you log in, you can jump from start to menu by typing on the login line: "*(first name) (Last name) (password)"

And when you are in 300 baud, every little bit helps. Later all!!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

True. But some have said they wanted to get on a BBS with their Atari modems,
so here's your chance. Otherwise, just telnet to rdfig.net and that will get
you there for free. :)

2054. Latest (June ‘08) online Vintage Technology magazine is available

Newsgroup: comp.sys.atari.8bit
Date: 2008-05-15 19:11:30 UTC
From: vintagetechnology@yahoo.co.uk
Message-ID: <fd997825-15be-4d4b-9573-7167b6143c5e@26g2000hsk.googlegroups.com>
Source record: 3293

Go to www.vintagetechnology.co.uk to download latest issue (June '08).
Only £0.99p / $1.99 for a 40+ page magazine devoted to the collection,
preservation and history of all aspects of digital and electronics
technology, including computers, arcade games, calculators, led
watches, phones, appliances, gadgets, robots, radio, audio and tv.

This issue features:

1970s television sets
Collectible digital cameras
Vintage game-watches
Mattel Aquarius – computer or colourful toy?
Vintage chess computers
Centipede arcade game
Vintage game-calculators
Vintage car radios
Light pens – magic wand or fun gimmick?
Dolls' house retro electronic delights
Unusual computer/gaming memorabilia
Repairing ZX Spectrums

Plus sections on museums & collections, latest events & news and book
review.

VTM aims to explore the legacy of recent past technology, explore new
‘electronica' which could become or already is collectible, be an
enjoyable resource for collectors & historians and celebrate the
history and personalities surrounding this subject.

2055. DarkForce winner for May 2008

Source record: 3295

Subject: RetroChallenge 2008

Retrocomputing enthusiasts the World over are cordially invited to participate
in the 2008 RetroChallenge, commencing July 1, 2008.

RetroChallenge is an opportunity for fans of "obsolete" platforms to spend a
month pushing their retrocomputing limits in the company of like-minded geeks.
Participants set their own goal(s) and typically keep the community apprised of
progress via weblogs or on the Retro BBS.

Challenges are as unique as the individual RetroChallenger -- in the past
participants have programmed games; created music and video content; performed
dangerous hardware hacks or simply spent a month trying to get an old computer
to boot.

RetroChallenge is not so much about competing, as it is about sharing. Think of
it as an on-line show-and-tell for RetroGeeks. Because the individual challenges
are self-posed, the RetroChallenge is equally well-suited to hoary old wizards
and tender newbies alike. It's not about winning, but about *doing*.

RetroChallenge is open to *all* retrocomputing platforms. For the sake of
simplicity (and to avoid the usual endless debate), the criteria for what
constitutes a "retro system" is anything older than 10 years, though
obviously the older the better.

For more details see retrochallenge.net

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

The Atari computer intellectual property rights are currently owned by
Atari Interactive, which is managed by today's Atari, Inc. Both of these
are divisions of Infogrames Entertainment.

2058. Re: Atari 815 question

Newsgroup: comp.sys.atari.8bit
Date: 2008-05-22 06:45:37 UTC
From: Rick D <a8maestro@a8maestro.com>
Message-ID: <48351691.FDA4DE24@a8maestro.com>
Source record: 3297

The 815 was aimed at the business market.. Obviously it needed more storage capacity than the home user(or so Atari thought).

I can't imagine it being double density only as most commercial software was still distributed on single density protected disks. Unless you had a single densisty drive as 1 to boot from. And then you run into the problem that most commercial software was stuck at 2 drives.

Rick
Don't reply to email address in this post.

2061. atari++ updated to 1.54

Newsgroup: comp.sys.atari.8bit
Date: 2008-05-22 14:07:54 UTC
From: Thomas Richter <thor@math.tu-berlin.de>
Message-ID: <g13uhi$r8p$1@infosun2.rus.uni-stuttgart.de>
Source record: 3300

```
Hi folks,

a new release of atari++, the Atari 8-bit emulator is available for
download at its usual location, namely:

http://www.math.tu-berlin.de/~thor/atari++/

New in this release:

- Fixed the handling of the initial keystroke.
- Added a curses (text-based) front-end.
- GTIA artifacts now support various GTIA models.
- GTIA supports now user-defined color maps.
- The GUI can now be used entirely by the keyboard or the
joystick, use the cursor keys to move the pointer from
gadget to gadget and press RETURN to click on an object.
- Added a RelMouseStick input device that reacts on the
relative mouse movements rather than its abstract position.
- Fixed the POKEY audio muting, it is now able to detect
situations in which a lower mixing frequency is audible
even though the channel itself is not.
- Fixed initial timing/speed setting, could have caused
audio-drop outs or slow play-back.

Note that the terminal output ("CURSES") is only available on *ix
operating systems, not for win. For details how to use it, please
consider the manual (included in the archive).

Thanks,
Thomas
```

2062. Atari800DC .77 Released

Newsgroup: comp.sys.atari.8bit
Date: 2008-05-23 22:43:34 UTC
From: Greg Goodwin <Greg.Goodwinp0.f2.n8.z8@fmlynet.org>
Message-ID: <14d0297e@familynet-international.org>
Source record: 3351

FamilyNet International Newsgate

(5200/800/XL/XE emu for Dreamcast)

Hello Doc Clu,

I've just released version 0.77 of Atari800DC

You can find it at
ftp://ftp.groessler.org/pub/chris/dreamca...77/atari800dc-0
.77-bin.tar.gz

The changes from 0.76 are

* enable basic R: device emulation with the DC Coder's Cable (no
modem controls; fixed to 8n1; baud rates 300 - 9600)
* use Atari800 2.0.3 code base
* use KOS svn code base version 560
* add possibility to switch X and Y axes of controller input
* ability to disable either the D-Pad or the Joystick of the
controllers (in "Controller Configuration" menu)
* ability to disable or enable Bienias' sound improvements. They
are too heavy for the DC and therefore disabled by default. 0.75
had them disabled, 0.76 had them enabled, now it's selectable.
* when saving or restoring state display a "please wait" since
accessing the VMU is very slow. This was already in 0.75 but got
lost in 0.76.

Please spread the news and thanks for your help.

regards,
Christian Groessler

FamilyNet International Newsgate

Excellent! This is always fun, an incentive for getting on your Atari computer setup and doing as much on it primarily as possible. :D

An Atari 800 won the Retrochellenge 2005.

A lot of fun, and the Retrochallenge usually has a BBS for all the contestants to hang out on, so it is really like stepping back to the 80's and 90's as you talk to other people who are there on Apple 2 computers, early Macs, Atari, Commodore computers.. just awesome.

Hope some of you will consider participating!

Doc Clu

2066. I am looking for this awesome Game called Crypts of Terror

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-01 03:04:45 UTC
From: Dan Shyan <danshyan@shaw.ca>
Message-ID: <hlo0k.179628$rd2.54366@pd7urf3no>
Source record: 3355

Hi guys..I'm glad I found this newsgroup. I am eagerly trying to get my
hands on a PC version of this outstanding Atari 400
game I played Years ago. My dad and I were addicted. It was produced in 1981
by Inhome Software which was a company based in Toronto Canada, I believe.
It was called Crypts of Terror and was designed for the Atari 400 system.

If anyone can tell me about any torrents, image file downloads, or if you
converted this game to PC your self, I would love to hear any suggestions on
how I can run this game on my XP computer. That would be awesome.

I am not sure if this game may have been developed into a PC game under
another name, but I don't think so

Thanks kindly for any information you guys might be able to give me.

2067. looking for Koala Painter and Micro Illustrator software

Hi Michael. You seem to be extremely knowledgeable about Atari 8 bit sytems. I am trying to find out some information about a game called Crypts of Terror which was released for the Atari 400 in 1981 by a company called INHOME software, which was based in Toronto Canada I believe. This same compnay released other titles like Captain Beeble...

I am trying to figure out if anyone ever converted this Crypts Of Terror into a version that could run on the PC platform.

DO you know anything about this game.? Any information would be greatly appreciated. With Any luck, you are the guy who wrote it ;)

The Koala Painter later became "Atari Artist" and I think you should find this. The program has just a different look (and, IIRC, one additional functionality for symmetry).

So long,
Thomas

2071. Question re: Program load

Newsgroup: comp.sys.atari.8bit

Probably an easy question for long-time Atari 8-bit users.. I have a diskette that came with a recently acquired 800XL that contains a financial analysis program.

- When I boot it on my 800 (48k of memory installed), it comes up to the DOS menu. I can list the diskette and see the application files, but using 'K' to run them results in Error 139.

- When booted on an 800XL fitted with an Ultraspeed Plus ROM upgrade, it does the same thing.

- When booted on a stock 800XL, lo and behold, it comes directly up into the application.

The question is: Why this inconsistent behavior?

Thanks for any answers!

Not much help but I remember a few accounting type programs that used a
binary loader for their software written in BASIC.

The binary would do things like trap reset/break and prevent you from
listing their BASIC code. The BASIC was also protected, substituting
returns for variables or something like that.

So you may want to try booting the 800 with a BASIC cart and if the XL
has reverse use of option key on boot, boot it with BASIC.

Rick

Thanks Rick. I thought it was a problem with my DNS cache but I've
cleared the cache and restarted everything and I still can't get there.
I can however get to some pretty random URLs that I know are
deffinately not cached here so I guess there's a problem with their
provider :(

I think probably just need BASIC at boot. So
BASIC cart with the 800, hold Option with
the ultra ROM XL.
Using 'K' at the DOS menu (DOS 2?) is a
binary SAVE. You don't want that, it could
be that you could 'L' binary load some file on
the disk, but probably it is a commercial disk that
boots up automatically with BASIC enabled.
```

<sigh> Now all I need to do is _find_ an 800 BASIC cart. The guy who sold me the computer has a basement full of such things, but I cannot convince him to look for them :-(.

Might be worth buying one of Steve Tucker's flash memory carts and loading what I need that way.

You seem to have access to an 800, XL with
a super ROM, and a stock 800XL. I guess
you need the disk to work on your 800.
It shouldn't be hard to find a BASIC cart, but
why don't you use one of the XLs?
Also, if you mention the name of the financial
program, it might be it is available as a binary load
or regular BASIC version.
If a regular BASIC, then you can use a binary
load BASIC and then just run it on the 800.
A binary load BASIC won't work if it is a
BASIC boot program, I guess. It might work
to see what files are on the disk. You might be
able to autorun BASIC and then autorun the
application at the same boot time.

I don't _need_ to, but I'm trying to learn about these units and wanted to.

> It shouldn't be hard to find a BASIC cart, but
> why don't you use one of the XLs?

In this brave, new eBay driven era, _nothing_ is easy to find anymore. The local thrift shops do not accept electronics and the recyclers send everything out for reclamation of metals. It is purely impossible to locate classic systems outside of eBay or sheer luck...

I'm not aware of what "regular" BASIC vs. "binary load" BASIC are, nor do I (yet) understand what you mean by autorun.

I spent some time reading the Atari 8-bit FAQ, but it doesn't get down to this sort of detail.

Thanks for your input, I'll try to follow up on those terms and learn more about these units and their software environment.

Steve

A "regular" basic is the one that comes on a cartridge for the A800. In the XL, this was part of the hardware. A "binary load" basic is a cartridge image that is bootstrapped from disk. Typically, there a filing system on said disk (Atari jargon: "A DOS") plus a binary-load file that is loaded by the DOS as part of the bootstrap process - this is then named "AUTORUN.SYS", a "magic" filename the dos looks for when starting the system, thus "autorun file". The problem might be that the mentioned program uses exactly the same mechanism to load itself, which makes loading the program automatically a bit hard. One can try to first boot the basic itself, and then locate the proper basic program and run that manually from the basic interpreter.

So long,
Thomas

I have a game file which is in CAS fornat. The emulator that I found seems
to be lookign for another ROM image file.
Is there a way of converting CAS image files?? Is there an emulator that
works with CAS files??

Thanks

From Atari800winplus emulator HELP about
loading CAS images:

****

Usage

The emulator can only read, not write, the cassette images. Moreover, it
requires the SIO patch enabled to emulate the cassette player.

To insert a cassette image, use File/Attach tape (Alt+T) or Cassette Control
dialog box. You can rewind tape by moving the slider, but usually a cassette
image contains only one Atari file (real cassettes often contained many).

To boot the tape, hold Atari Start key (F4), while performing cold start
(Shift+F5). Then press Space key. Or just use File/Autoboot image (Alt+B).

Note

The emulated cassette transmission is very fast, but before it starts, the
Atari OS has ca. 9 second delay. You have to wait that time, or you can use
Full speed (F7) if you like.

****

I'm sure you could make a BASIC cart from a
flash memory cart.

snip

OK. The 800 isn't able to run some things,
because it has only 48K memory, can't run
things that use memory under the OS, like
XL/XE machines can, for example Sparta(FTe)DOS.

People sell carts from time to time on ebaY.
There are some vendors that will sell you a BASIC
cart, such as Bravo Sierra (Ben Smith), Video 61
(Lance Ringquist), www.myatari.com B&C computer
visions. I'm pretty sure you could get a BASIC
cart for under $30 shipped to you.
There are three versions of BASIC, but any of the

three will probably work for the financial prog.

By 'regular' BASIC, I mean BASIC in ROM, either
built in like on the XL/XE or inserted on the 800.
Binary load BASIC does the same thing pretty much.
It is a normal binary file that you can (L) from Atari
DOS 2/2.5 (Load and Run).
Atari DOS 2/2.5 has a single 'autorun.sys' file
that will load and run at bootup. Later DOSes,
like SmartDOS, MyDOS 4.53 are menu DOSes
that can autoload multiple binary load files at bootup.
You just name the files FILE1.AR1 FILE2.AR2
in SmartDOS, I forget what the filename extension has to
be in MyDOS.
I guess some of this is a bit advanced and hard to
explain/understand.
Your wish to make stuff work on the 800 is common,
the 800 is a really neat machine.
I can send you a BASIC B file that will load and run
on any Atari8, including the 800. (I believe BASIC,
version B, will cause the fewest headaches, but I'm
pretty much alone in that belief, BASIC C being the
commonly preferred.)

Excellent! Thanks for the clear, concise explanation. Seems like this issue
should be covered in the FAQ. I'll be very embarrassed if it was and I missed it!

Steve

I'll look into that. eBay prices tend towards the stupid. Also, the last couple of Atari 8-bit purchases arrived smashed (no padding material, if you can believe it) and/or non-functional. Took a while to troubleshoot the 1050 drives down to a shorted tantalum cap and defective 2893 floppy controller respectively. The 800XL was brutalized in shipment and had a poorly-installed SuperDOS add-on. One of things I like about this older gear is that it's actually possible to troubleshoot to a component level!

Not advanced at all. I'm a CS person with years of experience in front of machines large and small. I never did learn how to absorb new environments by osmosis, though :-). Just need a few helpful hints to get me on the right track. Appreciate the pointers!

Ok..I found an emulator called xformer 8. when I start it up and select atari 800 DOS..I get a ready prompt on the screen.

How do I load my game file, which is a CAS format. What command do i need to give at the ready prompt to load the file?

Probably Xformer 8 won't load CAS files, I think.
You need Atari800WinPlus, will load CAS files.
The fact you get the READY prompt means you're
booting with BASIC, which you don't want to do
for most CAS files. There is another recent post
here that states how to load CAS files in A800WPlus.
To boot without BASIC, you need to hold OPTION
on a real computer at power on, but for Xformer, you need to turn off BASIC
toolbar Options.

2092. How to find a ROM image of the Atari operating System

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-03 04:25:18 UTC
From: Dan Shyan <danshyan@shaw.ca>
Message-ID: <OI31k.839$gc5.769@pd7urf2no>
Source record: 3381

I have asked a few questions about getting atari games, emulators etc, but I think I am missing a key component as well..

Atari800win seems to have a screen file asking for the location of the ROM. I thought that was the game file itself, but now I'm thinking you need an Atari ROM as well. Any ideas as to where I can get one.

If I am wrong, what the heck do you actually enter on the Atariwin800 Rom Image screen??

eg: what exactly does this mean?

The XL/XE button locates the ROM image of the Operating System for XL/XE machines. The file must be 16 KB long.

Thanks kindly :)

2093. Re: How to find a ROM image of the Atari operating System

xf25.zip under the heading Original XL ROM contains the following roms:

inflating: DEMOS2.XFD
inflating: XF25.EXE
inflating: ATARIBAS.ROM
inflating: ATARIOSB.ROM
inflating: ATARIXL.ROM
inflating: XF25.DOC
inflating: DOS25.XFD
inflating: DEMOS1.XFD
inflating: MYDOS45D.ATR

ATARIOSB.ROM is the rom used when emulating atari 400/800s
ATARIXL.ROM is used when you want to emulate one of the xls

here is a link:
http://sourceforge.net/project/showfiles.php?group_id=40606&package_id=32947

you will have to figure out exactly where to put them so the emulator can find
them, or change the config file to point to where they are located. Good Luck!

After the pain of setup is done there is a wealth of programs to run!

Thomas:
I've spent many, many hours programming in Atari
BASIC. All three, A B C, will hang from time to
time, ususally after you've put a lot of coding in
and didn't save it.
I found that B hangs the least.
That and the fact that B is a recompile with many
differences to A, whereas C is a less than 10 byte
patch to B.
I'm aware of the 'add 16 bytes every SAVE' problem
with B, and will LIST, NEW, ENTER, SAVE about
every five SAVEs. I also wrote a program to salvage
B SAVEs that no longer LOAD and RUN, similar
to Jindroush's CHKBAS.
I found that B has the least hangs, but I didn't quantify
it, scientifically, just an impression. I used B for
many years before I knew there was a C and A,
guess I got used to it.
Regards

```
C is exactly a 12 byte patch to B.
It is just a patch, not a re-compile, offsets are
the same, just 12 differences in three places.
I tried C when I learned of it, thinking "Great
no more SAVE problems", after a brief effort
using it, it hung more than B and I went back
to B.
```

Oh, and bringing my post back on topic, one example is my last box I
got atari800 going with svga to get great fullscreen going. This was
before the SDL version was out. Yikes, kernel recompile, figuring out
kernel boot commands for my onboard video etc, svglib-helper kernel module, yikes! Just use
SDL now.
Was Now I just use SDL!

I think you got a bad cartridge. Rev. C isn't that bad, just eliminates the +16 byte save problem and the editing crash bug. As much as I can remember, the only crash problem/fix B vs. C was when you used the editor to delete<or add?> a line ~128 bytes long. If you didn't create those

```
10 IF X > 1 THEN GOTO 20 ELSE GOSUB 200:FOR N=0
TO 20 POKE 1536+N, A(N,N):...
...
...
20 END
```

Three +lines long, it would never happen. I hated that type of code and I seem to recall only hitting the bug when I was working on other peoples code or using strings for data or code storage. Just have to remember it was the editor and both B&C would run good code exactly the same.

Rick

I do have a C cart, don't remember if I used that
or a binary load version. I compare B and C
binary load copies, to get the differences.
Making a binary load BASIC is just prepending
a ML to move RAMTOP down to 9FFF and
doing a CIOV to screen....

10 CIOV=$E456
20 IOCB=$350
30 RAMTOP=$6A
32 *=$600
40 LDA #$0C
50 STA IOCB+2
52 LDX #$10
60 JSR CIOV
70 LDA #$79
80 STA RAMTOP
0110 LDA #03
0120 STA IOCB+2
0130 L1
```

```
0140 LDA EDITOR
0150 LDA L1+1
0160 STA IOCB+4
0170 LDA L1+2
0180 STA IOCB+5
0190 LDA #$08
0200 STA IOCB+$0A
0210 LDX #$10
0220 JSR CIOV
0230 LDA #$0C
0240 STA IOCB+2
0250 LDX #$10
0260 JSR CIOV
0262 LDA #$79
0264 STA $6A
0270 RTS
0280 EDITOR
0290 .BYTE "E:",155
0310 *=$2E2
0320 .BYTE 0,6
0330 .END
```

That C is just a patch of B is known. It fixes specifically the
memory-move routine, required when shifting memory for variables around,
which then could hang. Thus, I wonder what hangs in C. I had B for
years, and it was an annoyance.

So long,
Thomas

I respect your experience with B. Yes, it is/was
an annoyance, it would freeze, almost Microsoft.
However, I'd like to know if you spent considerable
time working with C? I didn't work with it long,
maybe mine was/is a bad copy, because it was
worse than B. I don't remember, it may have
had problems like not LISTing, or freezes.
Right... If you have experience with C, I'd like
to hear about it.

Source record: 3395

While I tried to remember... I remembered some
other stuff.
If you LIST a long program, often it doesn't
LIST properly, won't ENTER.
I found that if you put:
0 REM
in the computer before an ENTER, it would
work, when ENTERing without it would fail.

Often, after a long LIST, you could try to ENTER
and at a point in the process a bunch of garbage
would start. Therefore it was necessary to LIST
to screen to verify that the ENTER completed.

It is part of a rule to save your work regularly.
And verify it. TS 2068 computers used a tape
and after you saved to tape, you always should
verify. The same is true with disk images on
PC with Ghost or Nero Backitup, you should
verify. Sometimes I just use a program that
reads through a file, like a CRC checker. I'm
not interested in the CRC, just want to verify
that I can read all the way through the file.

I've got it in the vendors list, as I do the other authorized digitized
mag sites that I know about:

page6.org (Paul Rixon) 2/05
United Kingdom
http://www.page6.org/
Publisher: authorized digitized editions of Page 6 (1982-1989),
Page 6 Atari User (1989), New Atari User (1989-1998)

Does that look ok?

Or did you have in mind to add it to the "Welcome" FAQ?

-Michael

I had a first generation 800XL, which, obviously, came with B, and
that's where I got my basic experience, you're right. It would be still
interesting to see where C hangs - I know it's hard to reproduce, the
MEMLO must be exactly identical.

Back then, I only had a tape recorder, and LISTing and re-ENTERing did
take very long. It wasn't really an acceptable solution.

C came later. I burned it as EPROM and installed it as replacement,
though at that time, I no longer entered many programs by hand. If I
did, I used TURBO-BASIC, which never hung for me.

So long,
Thomas

I, too, had a first generation 800XL. It has copper
switches in the keyboard, no mylar sheet.
This was 1984, if I recall, and I don't know when
C came out, probably about the time of the 130XE.
I tried three Coleco Adams before my son told me
to get an Atari. The Adams included a printer.
All three Adams smoked the printer (I mean literal
smoke coming out of the printer.) so I took them
back. The third or fourth time back I switched to
an Atari. It was $300 for the 800XL, $300 for
a 1027 'letter quality' printer, $80 for an Atariwriter
cart. My first disk drive came a month later, also
about $325 for a Rana 1000. I paid $49 for
SmartDOS to get a double dens. DOS. My
first game was from ANALOG, Crash Dive,
I couldn't understand all the hex DATA statements
in the type-in. My first disk game was 'Hellcat
Ace' by the same guy who still does PC games,
I forget his name.
Soon I was doing a BBS with a Rana and two
Indus GT. BBS at 300 baud.

Mine too, was a first gen. Atari 800XL. About
January 1984. It has copper switches in the keyboard,
no mylar sheet. I did a lot of BASIC stuff. Type-ins
from ANALOG. I believe that the really bad
reputation for Atari BASIC came with the version C.
Almost nobody did anything with C maybe. Everyone
wanted to do TurboBasic, ACTION!, Mac65.
OSS BASIC XE or XL. The real programmers
used a number of macro assemblers.
I've never heard from someone who used C
extensively.

Ok..someone told me to load my cas file by typing CLOAD and then hitting enter twice, and then at the next ready prompt, type run.....sure enough, my cas file starts to load, but then I suddenly get an ERROR 146 at line 1999 error ....

Any ideas why???

At the next ready prompt, if I try the Cload run sequence again, the system will tell me that the file is still loading, but it hangs up about 3/4 of the way.

Any ideas helpful

It could be the CAS file isn't a BASIC file, but
a binary load file.
If using Atari800winplus, do something like this,
or search HELP.
Usage

The emulator can only read, not write, the cassette images. Moreover, it
requires the SIO patch enabled to emulate the cassette player.

To insert a cassette image, use File/Attach tape (Alt+T) or Cassette Control
dialog box. You can rewind tape by moving the slider, but usually a cassette
image contains only one Atari file (real cassettes often contained many).

To boot the tape, hold Atari Start key (F4), while performing cold start
(Shift+F5). Then press Space key. Or just use File/Autoboot image (Alt+B).

Note

The emulated cassette transmission is very fast, but before it starts, the
Atari OS has ca. 9 second delay. You have to wait that time, or you can use
Full speed (F7) if you like.

Forgive the top post, Shifty.
You can get a reconditioned, like new, 1200XL
from www.myatari.com for $125 plus S&H and tax.
Finding one for under $20 will be hard. It will
cost that much to ship it to you.
Then there's keeping an eye out on ebaY.

Following is from B&C computervisions. URL above.
****
Reconditioned include power pack, TV cable
TV switch box, manual & Basic.
HDA009 COMPUTER 400 16K recon 79.95
HDA034 COMPUTER 400 48K recon 99.95
HDA013 COMPUTER 600XL 16K recon 49.95
HDA012 COMPUTER 600XL 64K recon 59.95
HDA032 COMPUTER 1200XL 64K recon 125.00
HDA015 COMPUTER 800 48K W/BASIC recon 100.00
HDA017R COMPUTER 800XL 64K recon 95.00
HDA001 COMPUTER XEGM 64K LESS ACC. 49.95
No: box, joystick, light gun or software. Like new.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Woah, where!? I wrote a Pac-Man style game that I was
really proud of as a kid, and it stopped loading all of
a sudden. A decade or so later, I learned about this Rev. B BASIC bug,
which is likely what caused it. (I remember my Pac-Man game because
I was obviously very traumatized by the whole thing :^))

I probably (hopefully!) still have that floppy somewhere...

I sent you a copy at the e-mail here, if you pick up
those e-mails. If not, lemme know another e-mail.
I worked with it some this evening in Atari800winplus
3.1. I got a bunch of crashes and failed ENTERs.
You definitely have to edit out the garbage at the
end of the LISTed file that SALVAGEX.BAS
makes, or the ENTER won't work.
If mine doesn't work, then there's Jindroushes CHKBAS
that I haven't use for a while. Seems like CHKBAS
you have to do an ASCII to ATASCII transation.
CHKBAS is a PC utility to do the same thing
my SALVAGEX.BAS does on the Atari, of
course much, much faster.
I did finally do a successful test.

2121. Atari 8-Bit Computers: Vendors and Developers

2008.04.26 Zdenek Burian: FLOP #51 published
2008.04.26 Piotr Fusik: ASAP 1.2.0
2008.04.23 Ullrich von Bassewitz: cc65 2.12.0
2008.04.16 Fandal: Outlaw, Swapz

------------------------------

Subject: Introduction
```

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they

are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

2122. How to switch from full screen in atari800 version 4 back to windowed screen??

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-06 06:41:08 UTC
From: Dan Shyan <danshyan@shaw.ca>
Message-ID: <8_42k.7282$js6.1662@pd7urf1no>
Source record: 3210

When this atari800 emulator boots up...its originally in a windowed screen. I have yet to figure oout how to get it back into windowed mode once it has been running in full screen mode. Alternatively, how do you access the menu commands when atari800 is in full screen mode???

Thanks

2123. Special thanks to Michael Current

Recently, Michael took the time to help me greatly with respect to finding, and actually loading this game in the emulator. I have been dying to find my favorite game from 20 years ago! This game I have been trying to find for a while!! Thanks Kindly Michael. Your assistance was greatly appreciated.

2126. Atari 7800 controllers with Atari 8-bits &/or Stelladapter?

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-08 00:57:08 UTC
From: bill@newbreedsoftware.com
Message-ID: <484b2e64$0$17203$742ec2ed@news.sonic.net>
Source record: 3215
Cross-posted to: rec.games.video.atari,comp.sys.atari.8bit

My Stelladapter is put away (Atari boxed up since we're moving soon),
but I was recently given an Atari 7800, and wondered if its two-button
controllers work with Stelladapter, the Atari-controller-to-PC-USB conveter?
How about with the Atari 8-bit computer?

And if it does, with either, what does the right fire-button appear as?
(I've used Sega Genesis controllers with my Atari 8-bit, and the B button
appears as a standard Atari joystick firebutton, and the C button could be
read by checking one of the paddle values. Is the 7800 the same?)

Thanks!

2127. Atari Trakball on PCs?

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-08 01:03:42 UTC
From: bill@newbreedsoftware.com
Message-ID: <484b2fee$0$17201$742ec2ed@news.sonic.net>
Source record: 3216

So... I have a wonderful Atari trakball, and I have a Stelladapter.
It just occured to me, I could probably read the joystick input in a program
on my computer (under Linux, Windows, etc.) and do the same pointer
calculations done on the Atari for mice and trackballs.

Does anyone see a problem with this idea? :)

2128. Trakball bowling

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-08 01:06:35 UTC
From: bill@newbreedsoftware.com
Message-ID: <484b309b$0$17201$742ec2ed@news.sonic.net>
Source record: 3217

Did anyone ever make any bowling games for the Atari 8-bit that utilizes
a trackball?

I saw an arcade cabinet at a Chuck E. Cheese's today that contained
three classic Atari arcade games (Centipede, Millipede and Missile Command),
as well as a modern Infogrames bowling game that LOOKED like it was from
the early 1980s (despite being (c) 2002), so apparently whatever hardware
was in the cabinet wasn't very sophisticated.

However, the bowling game was pretty fun, and I could see it being
implemented on the Atari computer (or, hell, even the 2600!).
Has it been done, and I just haven't seen it yet?

If not, maybe it's time for me to crack out the Action! cartridge and whip
something up. (I don't really grok bowling rules, nor do I care too much,
so I'd probably just release a 'bowling via trackball' engine, and let
someone else finish it up as a real game. ;))

2129. Atari history Q

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-08 14:22:58 UTC
From: "Matt J. McCullar" <mccullar@flash.net>
Message-ID: <ZUR2k.4637$uE5.2230@flpi144.ffdc.sbc.com>
Source record: 3218

While doing some research into the history of my home town of Arlington, Texas, I ran across a little nugget of Atari history.

In 1982, Atari had some sort of a business operating at 2109 E. Division. I never saw it or knew it had even been there until somewhat recently. Does anyone have any idea what Atari did there? Was it a distribution center, a computer store, a repair depot, a warehouse, or what? Today there is nothing to indicate that Atari had once been there.

Just wondering if anybody can provide any details.

Thanks!!!

Matt J. McCullar
Arlington, TX

Ah! Perfect!!! Thanks ever so much! I work not far from that location,
but until now have never had any reason to see what all is in that area now.
I drive past it fairly often. General Motors has a big manufacturing plant
very close to this area, and the new Dallas Cowboys stadium is being built
close by, too.

In looking at Google Maps, it has a Street View of the building. It's part
of a business park.

Not sure when Atari moved in or moved out. Wish I could have rooted through
their dumpster back then!

Thanks again!

I think the Atari Service thing was shut down when Warner sold Atari.
I doubt Tramiel would have kept it going, but maybe he did for a short
time?

2133. Tape sound mystery

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-08 23:11:29 UTC
From: Simon <nospam@no.spam>
Message-ID: <484c66e5$0$18752$426a74cc@news.free.fr>
Source record: 3222

Hi there,

I'm not an 8-bit Atari user, but I recently got loads of Oric tapes -
and found some unknown-sounding tape signal among them.
See here:
http://mercenarysite.free.fr/oric/tap_inconnu.zip

Can anyone tell me if it's for an 8-bit Atari, would it be some turbo
loader or whatever?

Seems so far it's not standard
Oric/Amstrad/C64/Exelvision/TI99/ZX81/Sharp MZ.

Thanks in advance to anyone helping!
Simon.

Thanks a lot !
By chance, do you know which model?

I'll try and see what kind of decoders exist.

Cheers.

Sure, it is any of the 8-bit Ataris, 400, 800,
800XL, 600XL, 130XE, 65XE, 65XEGS,
1200XL, and rare 1400XL.
There is a wav to CAS program, never used it,
but I guess you hook up your analog tape player
to the input of a PC sound card and it will
make a CAS file that can be played on a
Atari 8-bit emulator like Atari800winplus.
The archive site langesite seems down.
Hmm. WAV2CAS is the program, lemme know
if you want me e-mail to you.

It could be any one, you'd never know from the sound of the tape, only
by trying to run it on different models. Some older programs would only
run on 400/800, and there weren't many people using cassettes after the
XL/XE models were introduced. The way the Atari tape system worked, I
don't think turbo loaders were possible, but I could be wrong.

Thanks a lot for the info.
I tried the conversion program, I'm not quite sure about the result but
it doesn't seem to display too many errors.
I'll have to check some day with an emulator!

Thanks again!
Simon

I think most commercial tapes would work on any
8-bit. Only a few required a translator disk, or
such, for disk software. It is sorta a rule that direct
calls into the OS was bad form, and resulted in
need for the translators, or in the case of tapes, just
wouldn't run.

A 100% free Archon remake is available at http://archon.curvenet.co.uk

Its for Windows only at the moment. I'd like to see a Mac release. I *think* it's the evolution of the "Archon 2001" game that was mentioned on here an age ago. Apparently, it uses the same game timings as the original 8-bit versions, but with improved visuals and audio. I'd forgotten how great a game Archon is. Whilst I'd love to see Archon in 3D, this great remake will keep me happy for now...

The problem with the Atari tape was that while the encoding (data ->
sound) happened in the computer itself, the decoding did take place in
the tape recorder. Which means that any type of turbo loader must modify
the tape hardware. However, I'm aware of at least one modification for
the tape drive that implemented a turbo, but I forgot the name.

Greetings,
Thomas

I tried Xarchon and it just didn't play well. It simply didn't feel
like Archon (and I'm not talking about the rather poor graphics).
Archon: Evolution's engine is apparently based on the original 8-bit
code (source: Wiki), which would explain why it matches the original
so closely.

I really don't like the Sorceress icon in Archon: Evolution though, so
I'm trying to create a new one for it. The developers welcome any
help, as the original artist is no longer on board.

I'm not familiar with any Atari 8 bit turbo tape systems, but this file is definitely NOT the standard Atari tape format. But it does sound like a speeded up version nonetheless.

(Maybe a Photon Emitter will shed some light on this issue, Simon...) (((-;

> How about Archon Ultra? I think it's the best PC version.

I had high hopes for "Ultra", but the battles are too slooooow.
Everything just feels sluggish when compared with the pace of the
original. I know the developers tried to create a bigger battlefield,
but the switching between resolutions was off putting.

The board looks very nice in Ultra, and I like the idea of the dual
attack though. I just miss the pace of the original. That's probably
why I prefer "Evolution" - It matches the pace of the original exactly.

I don't understand that RapidShare site where you have to download Archon
from.
So far, no download for me. Is that file anywhere else?

Before downloading the web site shows you a code then asks you to enter the
"letters that are attached to a cat".
What the F*** is that??? As far as I can see, all letters have a stupid cat
on them. Whatever I type in doesn't work.

I officially hate that site.

Only 4 of them have cats. Other have dogs. :) Type only the 4 letters with
the cats. They can be rotated, so look for the round head or tail parallel
with the body (cats). :]

I had to go and take a look just to see what you were talking about. The security system is even worse than I expected having read your description!

I stared and stared, and I can't tell which ones have cats attached to the letters either. (In fact I'm not even sure I can read the letters at all, regardless of whether they have cats attached) And all that was after I had to wait 3 minutes before it would even let me attempt to enter a code.

That does indeed appear to be the stupidest security system ever created.

Hello all,

I'm busy moving house at the moment and I'm clearing out some bits of unwanted Atari items on eBay. I have an 850, 800 (for spares - sticky keyboard problem), and a unique opportunity for you to own the master disk set used for our PD library. Most of these items are for the UK only. Here's the link (eBay UK):

http://search.ebay.co.uk/_W0QQsassZdeangarraghty

I may well add more items as I'm clearing out.

Dean Garraghty

Oh, maybe it is a Novaload tape ;-)

Simon

2159. FS: ATARI 800XL working (?) incl videocable, monitor is extra for shipping, also cartridge (nonworking?, Citibank unknown applications)

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-16 00:01:17 UTC
From: Mark Licetti <MetalBladeNOJUNK@NOJUNKprodigy.net>
Message-ID: <%Ug5k.8300$jI5.1774@flpi148.ffdc.sbc.com>
Source record: 3248

I have Atari 800XL system, main, CPU or "console" unit - whatever it was called (I am not an expert on vintage computers/games). Owner claims it WORKS FINE, but since Chess Game memory cartridge failed they never used it, chess was the only thing they cared for. There's another cartridge from Citibank and I dont know wha tit does, I am quite sure main unit works. Video cable is included, even monitor is available but I doubt anyone wants a small CRT whitish monitor these days, it's probbaly better to hook up to a modern monitor thru some sort of connector adapter. I have connectorized videocable for it.

Main unit looks like a keyboard integrated with CPU/mainboard, it's clean and owner says it works. Any interest?

Do NOT reply on Newsgroup, email instead and REMOVE "NOJUNK" strings in my address.

Best if transaction is conducted on Ebay 9for safety) - my Ebay feedback is 100% positive, not to mention a DECADE of Newsgroups trading without any complains.

Well I eventually got the download.
It was luck, be sure. I went back to the site and it took 3 tries.
But, I never saw the difference between the dogs & cats. In fact, some of
them were so obscured you couldn't tell what animal it was.

I *think* the site probably does this to help convince the user to get a
paid account to avoid that security system.
I'd bet money on it.

Thanks though!

I eventually got the download.
It was 90% luck!!! I went back to the site and it took 3 tries.
I never saw the difference between the dogs & cats. In fact, some of them
were so obscured you couldn't tell what animal it was.

I *think* the site probably does this to help convince the user to get a
paid account to avoid that security system.
I'd bet money on it.

Thanks though!

You wouldn't have anyone to bet against, probably. ;)

> Thanks though!

There's another tip for you. Rapidshare has so called "happy hour" mode
when all the security checks as well as waiting with countdowns are
turned off for "free users". Overhere in Europe (GMT+1/2) it's roughly
from midnight till 9 AM or so. I suppose it relates to bandwidth usage
by Rapidshare servers.

P.S. Sorry for off-topic replies to everyone else. :)

Not quite like that. Their problem was in software that was able to OCR
the image and thus allow free users to use unattended download
capability, which is something that they provide for premium users only.

The cats and dogs logic was the only way to stop that particulat
software from functioning :)

Go to www.vintagetechnology.co.uk to download latest issue (July '08).
Only £0.99p / $1.99 for a 40+ page magazine devoted to the collection,
preservation and history of all aspects of digital and electronics
technology, including computers, arcade games, calculators, led
watches, phones, appliances, gadgets and robots.

This issue features:

The first pocket computers
Historic hypertext and how the WWW could have started much earlier
The development of car driving games
Vintage personal data-calculators
Entex handheld games
Cordless phones
Flip clocks
Merits of using traditional auction houses vs. eBay
Commodore PET repairs
Daisy wheel printers
ZX Spectrum memories

Plus sections on museums & collections, latest events & news and book
reviews.

VTM aims to explore the legacy of recent past technology, explore new
‘electronica' which could become or already is collectible, be an
enjoyable resource for collectors & historians and celebrate the
history and personalities surrounding this subject.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I will second that about Ultra being too slooooooo. I bought it because of my
love for the 8-bit versions. My kids had played it on the XL and were excited
about Ultra until they played it. The experience was more like a chess game
and not a video game and they got bored with it and so did I.

2170. Question: XL-FIX / Ultraspeed Plus OS

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-21 13:26:37 UTC
From: Steven Hirsch <snhirsch@gmail.com>
Message-ID: <iP2dnaDDFvwQnMDVnZ2dnUVZ_rfinZ2d@giganews.com>
Source record: 3059

Can someone explain the relationship (if any) between these products? I have an 800XL with what I thought was an Ultraspeed update installed, but Bob Puff tells me it's not. I found pictures on the Atariage forum that I think refer to it as an XL-FIX.

There are two circuit boards: A small one that sandwiches under a small DIP IC below the cartridge slot and a large one that goes underneath the ROM chip to the right of that location. There are four wires that solder to pins on other chips and a 3-position switch on the rear panel of the computer. The large board has "Computer Software Services" screened on the bottom of it.

Problem is this thing just doesn't seem to do anything much. In the up switch position, it will eventually bring up the Atari self-test screen. With a disk drive attached, it boots. None of the "hot keys" seem to do anything at all.

In the down position, same thing but no self-test. Also no special functions that I'm able to determine.

In the mid position the machine will not boot - blank screen.

If this is an XL-FIX, where can I find documentation / install instructions for it? What features _should_ it be adding and how can I test/verify them?

Steve

You talked to Bob Puff, so that puzzles me as I'm only
aware of one OS ROM from CSS, the US+ ROM.
You might want to go to CSS site
http://www.nleaudio.com/css/
and find out more about the Ultraspeed OS.
The four wires are like the US+. I can't find any

documentation on the US+ OS.
The site says there is a configuration menu.
Maybe if you tried to hold SELECT on boot you might
get a menu. I believe the US+ is three OS. One is
for ultraspeed disk IO. One is for 800 compatablility
and I don't know the third.

Good luck in your search. Sorry I can't be of more help but as much as I
can remember ~25 years ago reading the advertising blurb, hardware XL
Fix was a copy protection defeater.

More then you need to know, but way back when, there was a program to
copy carts on an 800. All you would do is plug a pencil or toothpick
into the cover interlock switch so you pull and plug in carts with the
computer on.

Sooooo... a couple of things went down. That particular 'CARTCOPY'
program used an illegal jump to the OS which was changed in the XL. Cart
manufacturers used different techniques to make sure you weren't running
their programs from RAM such as writing to the CART address space.

IIRC what the XL fix did was replace the XL OS with one that is ~more
800 OS compatible and allow you to defeat the carts with copy protection

by changing the ability to write to cart address space.

This conversation comes up about once or twice a year. It's been less frequent lately since ~10 years ago I posted a program to change the illegal address to something that will work with an XL and lots of people are using the emulators which means they can just switch to 800 emulation. I don't know just how much software there is available from archives that still has the problem. Most of the hacked cart to binary load files were hacked right, it was only the ones made with 'CARTCOPY' that needed fixing. Seemed like it used to be all of them but over the years they have been patched and fixed.

So if you have a disk file that doesn't run, I don't know like Missile Command binary maybe, try flipping the switch and see if it runs. For pratical purposes, the problems addressed by your hardware modification were addressed by programmers such that it isn't necessary anymore.

Rick

Ah, so this isn't supposed to have all the nice hot-key activated menus and
feature? Very confusing.

2174. Gauntlet & Gauntletak (Donald R. Lebeau shoot'em up game)

Newsgroup: comp.sys.atari.8bit
Date: 2008-06-24 21:56:07 UTC
From: bill@newbreedsoftware.com
Message-ID: <48616d77$0$17223$742ec2ed@news.sonic.net>
Source record: 3063

I saw this over at AtariAge:

http://www.atariage.com/forums/index.php?showtopic=100537

And it looks like someone has dug up the 'registered version' of
Donald R. Lebeau's "Gauntlet" space shooter game (which in the end was
called "Gauntletak" to avoid conflict with Atari Games' arcade game)
and it's now available for download!

http://atarimania.com/detail_soft.php?MENU=8&VERSION_ID=20465

I look forward to giving it a try. I really enjoyed Gauntlet, and
always wondered what the reg'd version was like. AtariMania has a PDF scan
of the printed manual, too!

Hi,

I was subscribed to this mailing list until dec-2006, that's the time
of the last message I received.

I had some email account problems at that time and thought I was kicked
off because of too many bounces to my email address.

I've tried the instructions at http://krap.pl/atari/atari8-l to
subscrive, but I don't get any response.

Also a mail to the moderator didn't get a response.

So, has it died?

regards,
chris

a Retro Gaming expo, Austin,TX
Hello,

The last retro, classic, arcade, console gaming show was in 2003, and there has been no word on another one, so I have also decided to have the show NOW! after a couple of years looking for interest. I will not wait anymore. If this succeeds, then I will have more. I really need vendors and interest from others in systems other than Atari(I have that started).

Gamer Expo
Classic, retro, arcade, console, and computer gaming show

So I have the chance to pre-order an SIO2USB from ABBUC.
Including shipping and handling and a small non-ABBUC-member charge,
it looks like it'll cost over $200.

I was eyeing the SIO2SD, and it looks like a fine device that could be
had for closer to $60USD, I _think_. But... who can provide one to me?

Damnit, what do I _do_!?

Try this: http://sio2sd.gucio.pl/index_en.html
or contact the author through email: http://marcinprusisz.pl/?p=p_20&sName=kontakt
On http://atari.online.pl/v01/index.phtml?subaction=showfull&id=1211543044&archive=&start_from=&ucat=9&ct=stragan
you can find info that the interface costs ~40 euro

Hope it helps.

P.S.
It seems that Atarians over the World should learn Polish or find a
good translator ;-)

I saw that. It's unclear whether he sells them, pre-assembled, though. :)

<snip>
> you can find info that the interface costs ~40 euro

Google reports that, right now, that comes out to about $62USD.
Not sure what shipping would be from Poland. In any case, it seems a lot
more reasonable than SIO2USB, and I think I'm perfectly fine having JUST
support for SD cards. (My laptop has a built-in reader, and we have both an
SD and microSD (plus converter) floating around.)

<snip>
> It seems that Atarians over the World should learn Polish or find a

Bill - I would not hesitate to purchase one of these from Marcin. He does excellent work (yes, pre-assembled) and ships very quickly. I got one for myself a while back, another one recently for someone else, and I also purchased a IDEA/KMK hard drive adapter from him a little while back as well, and I had zero issues with any of the 3 purchases. Oh, and I use the SIO2SD ALL the time.

Seems so to me. I guess I subscribed for the life of the list, but
several messages I sent to it last night disappeared into the ether. It
certainly had been dormant for a long time, but until now I assumed it was
still there.

I'll remove mention of it in the 'Welcome FAQ'.

I'm in the same place. The SIO2USB sounds so amazing, but for so much
money..

What does SIO2USB do that SIO2SD doesn't do? Someone want to speak up for
SIO2USB?

Information I've found on atari.online.pl says that shipping, a
manual, a DVD with software and PayPal fees are included. But it would
be better to ask the author of sio2sd if it is still valid.

The easiest option is to install a game DOS (like S. Bauke's NDos) on the drive, and then simply boot from the disk.

So long,
Thomas

If it is an 800/400, remove any carts. If it is an XL or XE with stock OS, hold down the option key while booting a disk with DOS on it. IIRC From the menu choose 'L for load binary, give it the full file name i.e. GORF.OBJ, and it should run if it was properly saved.

If it wasn't properly saved, you may have to choose a run address with 'M option. First guess would be it could be a cart image with A000 for the run address.

There are other things you can do, like a binary save 'K with run/init address to patch those in and make it a load and go file if that is the problem. Maybe menu option 'B for run cart would work.

Most of us can piece together what the thing should do from a few bytes perpended and/or appended to the file.

> load OBJ files from a disk drive?
>
> Thanks

OK, You've hooked the 1050 to the SIO
port. You turn the computer on. If the computer
is a XL/XE, you hold OPTION until the disk
starts booting.
Now, you get a DOS menu screen, with DOS
2/2.5. Or you get a game screen if the disk is
a game menu disk. If a game menu disk, it
is simply hit the letter of the game you want.
But probably it is a DOS 2/2.5 disk, and you
get the DUP menu. Pick 'L' for load file.
Uh-oh, you don't know what is on the disk.
You hit 'A' Return Return to get a directory
listing of D1: Now you can see the files on
the disk. Now type 'L' Return and type
D:FILENAME.EXT (PACMAN.OBJ eg.).
and the game will load and run.
Some games require a game load disk, but
that should be on your disk. If you get
the BASIC READY prompt when you boot,
you didn't successfully hold OPTION on boot,
try again.
If the game doesn't run, or the screen goes blank,
it may be a menu disk loader program. A very
few programs will require BASIC, so you don't
hold OPTION for those.

2200. Archimedes Spiral "hat" demo (graphics 8)

Newsgroup: comp.sys.atari.8bit
Date: 2008-07-03 19:29:09 UTC
From: Jon Bailey <hobart@gmail.com>
Message-ID: <c37e7d73-5575-4c80-a3e5-4daf367df231@m45g2000hsb.googlegroups.com>
Source record: 3089

I've skimmed the 'net every few years for this one to no avail, I
figure it may strike a chord with someone. :-)

There was a VERY short (but dense) Atari Basic demo that took hours to
run. When it completed, it would show, drawn in graphics mode 8+16,
from a three-quarters perspective, a 3D surface, with hidden lines
removed. The final image looked rather like a hat.

I seem to remember it being referred to as "Archimedes Spiral" in the
demo.

I recall the article with the program listing had some suggested
modifications (disabling hidden line removal made the program run
faster) -- I remember the bracketed editor's quote "[It still looks
like a hat to me --Ed.]".

I grew up in Michigan, this could conceivably have been from the
M.A.C.E. Journal newsletter...

Allen MacroWare's "Printwiz" used the image as their title screen
(http://hobart.googlepages.com/printwiz.jpg)

Anyone recall this one?

Cheers,
-Jon Bailey

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Some of the best arcade translations from the 80's were done on the 8bit, some notable ones: Donkey Kong, Joust, Defender, Mr Do, Ms Pac Man, Arkanoid, Popeye, Frogger, Missle Command, Gyruss, Galaxians, Centipede (2 versions the latter version is better), and many more I am forgetting...

Other games off the top of my head:

Star Raiders, Zybex, K-razy Shootout, Shamus, Blue Max, MULE, Ultima series, Jumpman/Jumpman JR, Bruce Lee, Ballblazer, Rescue on Fractalus, Dropzone, Fort Apocalpse, Miner 2049'er, Montezuma's Revenge, Quasimodo, Rainbow walker, Necromancer, Archon, Gateway to Apshai, Zone Ranger....

that should get you started.

Nobody replied now for a couple days.
I looked for it in my archives. I bet I have it,
maybe just can't find it. I searched for
'gr8' and 'archi' and some gr8 pic disks.
I just want you to know I looked, and I don't
remember it. I have about 2.8 gigs of files,
I bet it is in there somewhere.
You got any other search ideas?

I don't recall any text that may have been in the program other than
(potentially) Archimedes Spiral. It's been suggested that it may have
been from COMPUTE! magazine, that's about it. (Thanks for looking!)

I looked some more. In Compute stuff.
I found a program called 'Spralizer' in Oct.
83 Compute by Chayim Avinor. Now there's
a name you might remember. I ran it, it is slow.
It asks for three or four criteria, then starts drawing
ovals that end up like the atomic energy logo.
It could be it would make that hat with the right
criteria, but it doesn't look like it. I found no
reference to Archimedes in the BASIC program
listing.

Simple: Avoid eBay and buy it from Steven Tucker:

http://www.atarimax.com/sio2pc/documentation/

If you want to sacrifice an SIO cable by cutting the end off, an SIO2PC with screw terminals is $24.95. Otherwise, figure on $29.99 with onboard SIO jack. Shipping on top of that, too, but they're very lightweight.

Works great. Just bought one myself last month.

Steve

Somebody suggests www.atarimax.com for
a really good SIO2PC/APE/PRO interface.
The PRO interface will allow you to load and
run PRO images, but you can do with that feature.
There are instructions online to make your own
SIO2PC interface with a 1482 chip a diode
and a couple resistors, and of course the
PC serial cable and SIO cable you would have
to sacrifice/cut in half.
So, there you have a few choices. I think the
instructions or link to them are on atarimax as well.

> And silly question, but can I download games thru the internet and
> save onto the Atari Disk Drive and later play them thru my atari
>
Yes, you can download from internet and
use on your Atari. That would require some
software to run your SIO2PC. Again, atarimax
has free software, called APE, to do that. APE
comes as trial, somewhat disabled, Windows and
DOS versions. I think writing to Atari disk drive
from PC is one of the disabled features. You
can get the original SIO2PC/Nick Kennedy
software, I haven't used that, it is free.
If you have an APE interface and APE software,
you can pretty much retire your Atari 1050/etc.
It can be faster and more convenient.

Just to mention: The Linux port, "atarisio", is fully functional and free. Perhaps a bit more difficult to use (since it lacks the pointy-clicky GUI front end) but can support operation in both directions.

The 'atarixfer' utility lets you transfer data to and from an Atari diskette drive. 'atariserver' lets the Linux box offer up Atari diskette images (in several popular formats) as if they were physical drives.

The author is engaged, willing to answer questions and has already fixed a bug I reported. Can't ask for more!

I have an SIO2PC from Steve Tucker (AtariMax). I ... can't use that
with 'atarixfer', can I ???

(And yes, Hias is very responsive, and his code has been easy to tweak,
when I need to (i.e., major Linux Kernel updates incompatible with an
older version of atarisio :^)))

Why not? That's how I'm setup here and it's just fine. Not sure the USB
version would be compatible, but the serial port adapter is ok.

Well shoot! I didn't realize! :^P I'll need to try it out!
That'd probably be a lot easier way of backing up all my old floppies!

Just pay close attention to the atarixfer docs: There's a special command
line switch (-p) required when using the Tucker SIO2PC.

Posting-Frequency: 14 days
Last-modified: June 30, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Here are a pair of videos of "Shredz64", a Guitar Hero style game
for the C=64 that uses the PlayStation controllers via an adapter
by the same folks:

http://www.youtube.com/watch?v=WyCMM6e1Lbo
http://www.youtube.com/watch?v=52gcC3Sn-Gw

Here's a link to the adapter, which apparently should also work on
Commodore Amigas, Sega Genesis, and Atari 2600 (so I assume also Atari 8-bit
and Atari ST):

http://www.synthdreams.com/psx64.php

Enjoy!

Hmm.. Lemme see.
Get a APE interface and cables.
Use disk communicator by Bob Puff to
make a .DCM file of your floppy.
Use imagic by Steve Tucker to make
.ATR out of the DCM file.
Now you can load and play your .ATR
on an emulator, I prefer Atari800winplus,
but there are others.
There may be a direct disk to .ATR maker.
The key is the APE/SIO2PC interface.
There's probably other ways. For instance
there are archives that have about every game
made. There are still vendors that will sell
you any game you want.

thanks for the info. Will dig deeper, and see if i can find the
easiest way. I wanna play Joust! I have a 130xe and a 1050 drive,
and could get out the disk and play, but would rather play on the
pc.

2231. DarkForce! prize winners for June 2008

Greetings everyone!

Here are the lucky winners for June 2008 at The DarkForce! BBS:

June 2008
1. ST Magazine - Leehanken wins the free 3 mag. subscription

2. TOS 2.06 ROMs - Orion_ wins this for his Atari ST!

Congratulations to our winners!

Also, here are July's prizes:

July 2008

1. A complete TOS 2.06 ROM set for your ST, courtesy of Techie_Alison
(thanks Alison!)

Congratulations to our winners, and good luck to this months callers!

:)

PS Sorry about being late this month folks, vacation and all that :)

Ah. The easiest way to play joust on pc is
download the joust .ATR or file and play it
on an emulator, forget APE.
You can find Joust at Vietnam site. You might
have to fiddle with Imageman or Xdir to get
the joust file onto an .ATR.
If you have an original Joust disk, it would
be problematic getting that protected disk
over to a .PRO image. And I don't think
emulators use .PRO images.
The ATR image is a file for emulating an
Atari disk.

hi. What's vietnam site? What's the url? thanks. Have a ton of
games. I also wanna play dig dug, super pac-man, miner 2049er,
zaxxon, etc. damn! what nostalgia!! i just have Joust as an .exe.
Will need to get out the 130xe and 1050 later today, and see if i can
convert some games to .ATR.

thanks!

Being P2P places the traffic load on the downloaders. Also, there was never more than, at the outside guess, 2 gigs of Atari 8-bit material ever.

I took a look at that archive, and saw a bunch of ST stuff. I am not into 16 bit C=64s ala Tramiel (Although I have a 1040ST, it's mothballed.)

I stuck with Jay Miner machines, the Atari 8-bits and the Amigas.

Although dated, my torrent is pure 8-bit Atari (Except for the emulators, and the hardware adaptors like SIO2PC and APE), it's also had most of the compressed files decompressed internally, to make use in Atari800Win+ easier.

BUT... Thanks for the ftp link! It is worthy. Sad thing is, I don't see any of the atari pages (Including a search for archives on atari.org) linking to pigwa. Will check again, and fix if not there.

Zap

Kudos to you!

Hi.

You can find .ATR images of just about any Atari 8-bit game on the web.
So all you'd need is to download Atari800win.

Go here:
http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=2690

Download "joust.zip". Unzip it to "joust.rom". In Atari800Win, choose
"File -> Attach Cartridge". Pick joust.rom.
Pick standard cartridge (default). Start playing!!!

You can download AtariWin800 4.0 from: http://www.a800win.atari-area.prv.pl/

I was quite surprised recently to notice that www.faqs.org seems to have
been resurrected. That site had not been mirroring the latest FAQ
versions since spring 2004.

This means that, after 4 years without them, we now have auto-generated
Multipart versions of the latest editions of the Atari 8-bit FAQ and
Vendor Lists again:

http://www.faqs.org/faqs/atari-8-bit/vendev/preamble.html
http://www.faqs.org/faqs/atari-8-bit/faq/preamble.html

My apologies. Don't go to that Vietnam site.
It has adware and maybe other malware.
www.atarimania.com is OK. Then there's
the ftp site ftp.pigwa.net probably hard to navigate, but has lots of
stuff.

I tried Joust. The binary load ones I found
wouldn't work in atari800winplus 3.1.
I finally got Joust to work from a download
from the Vietnam site, which didn't seem to
be loading stuff and poping up a 'adware downloader' program this time.
You can try the Vietnam site, I guess it is
OK. There's a Joust.ATR there.
http://vjetnam.hopto.org/

The game isn't much fun with the emulator keyboard
joystick emulation, but I don't know how you'd get
a PC joystick working.

The ftp.pigwa.net site is difficult to navigate, unless
you know which directories to go to. I think
goto 'stuff' 'collections' 'holmes cd' then you can
find atari executables and atrs. Best would be
if there's a index for Holmes there to search before
you start hunting.

hi. I am having trouble with Atari800Win Plus. It keeps on giving an
error, saying that "A ROM load error prevented ATari800Win Plus from
booting, you should check the ROM Settings under "Atari/Rom Images"
menu. Then i go there, input joust as a cartridge, and click ok.
Then it keeps going back to that error again. Got any ideas?

You don't have the system ROMs,
BASIC, OSA, OSB, XL/XE.
http://ftp.pigwa.net/stuff/collections/holmes%20cd/Holmes%202/PC%20Atari%20Emulators%20Old
/index.html
atariroms.zip

Lemme see. That probably won't copy and paste.

stuff/collections/holmes cd/pc atari emulators old/atariromx.zip

You need ataribas.rom, atariosa.rom and atarixl.rom and put them in a ROM
directory in your
atari800winplus directory.

I believe that is a ROMS directory, not ROM.
Maybe there is a documentation to atari800winplus 3.1?

roms directory. the atariroms.zip is at the
bottom of the pigwa url I give, not in alphabet order.
It has the ones you need, the atarixl.rom, ataribas.rom and atariosa.rom.
Probably won't use the 800 ROMs (atariosa.rom and atariosb.rom).
Then there's a 5200 ROM too, but I haven't used that.

so inside the folder for Atari800win plus, there should be a folder
named "ROM"? Then i should put the 3 ROMS in the atarirom.zip file
inside that "ROM" folder?

please clarify. thanks

Right. ROMS or roms folder inside the
folder you put the a800wp in.

Yes, good luck. You're just getting started,
which takes some time and effort.

GAMER EXPO is on the verge of cancellation!

Interest level/deadline ratio=40%(down)

Do you want this show? Do you want the other shows listed below? I am NOT getting enough responses for this show to go on. After Two years, even my interest in classic, retro gaming/computing is falling! Cancellation deadline is approaching...9 days left! Reserve, buy, email NOW!!!!

Other Meetings, Events, and Expos
Do you want these types of meetings/expos?
Then sign up at the show or send an email to "forum at a8maestro.com".
Possible dates are October 11, 2008 or March 14, 2009.

* Board and Card Gaming
* Comic and Graphic Novel
* Gaming Network
* Interested in connecting with a classic console and /or computer gaming network(i.e. Midi maze on the Atari ST or Maze of Agdagon on the Atari 8 bit, among others)?
* Modern Gaming/Computer
* Monthly Saturday surplus Computers and Electronics Swap Meet
* Science Fiction/Fantasy

EMAIL NOW!!!!!!gamer2k8@a8maestro.com - - - reservations@a8maestro.com

Hi,

My name is Tony. I began study a little 6502 in Feb. I would love to make a cartridge for the 800xl. (I did previously make a cart for the Nintendo NES, a very simple program that I was helped with from the people at the NESDEV forum.

I want to learn to make programs for the Atari 800xl, make cart. I am planning to write the code on a on 800xl and then transfer my program to my pc using the SIO2PC and APE from AtariAge.

The one thing that is eluding me is finding a real example of 6502 assemble code for the autoboot cartridge header.

I want to be able to pop in the cart and have it boot up my program automatically.

Could anyone refer me to any real ASM code examples? Are there other ways of having your cart boot when plugged into the 800xl?

Thanks for any help.

Tony

It is easier then that. There are two locations in the cart that the OS will transfer control to. Typically for an 8k cart it would be memory mapped in the range $A000-$BFFF for the INIT would be at $BFFE=$BFFF and START at $BFFA-$BFFB.

A good ref is http://www.atariarchives.org/mapping/

Most people just point the init to a RTS command somewhere in the cart or OS address space. The INIT can be used but it is mainly there for taking control of the computer early before the rest of the OS boot routines run.

The start address is just low byte/high byte of your code start address. i.e. if you have a program assembled to run starting at $A000 you would have a $00 at $BFFA and an $A0 at $BFFB.

BUT the way you do it is up to you. I've had programs that ran from low ram. I just put a move routine that relocated the code to low memory then jumped to it. I've also done programs that allowed DOS boot and transfer to DUP. I seem to recall using provisions in my EPROM programmer to fill in the START and INIT data as well as boot flags.

For laughs and giggles since you have an XL, peek those locations to see what they are and where they point. IIRC you can use the DUP Run from location to transfer control to them from DUP.

Rick

You didn't mention you have an eprom burner that
will work with the Atari.
As Rick says, put the address of a RTS at
BFFE/F. Put a pointer to the run address
at BFFA/B.
Something like

```
10 *=$BFFE
20 .BYTE. 0,6
30 *=$BFFA
40 BYTE. 0,$a0
50 *=$600
60 RTS
70 *=$A000
80 START
90 LDA #0
100 STA $600
110 RTS
120 .END
```

Maybe something like that. Assemble it and
then burn it to the eprom.
Rick..... Did I get that?

I have a Willem programmer that I've been using to burn chips for NES
carts. Going to read these replies through and see what I can do.
Thanks very much for the info, appreciate it.

Tony

It is close for an Atari burner but after our posts Tony posted that he is using a Willem programmer which changes things. I believe the Willem programmer is for an IBM so it expects a binary image of a ROM and wouldn't understand the load address header of Atari files. Segmented files<?> are way beyond it too. Even if you do a binary load and suppress the start/init to get rid of segmented files, you would still put that six byte header on when you did a binary save to clean it up.

So Tony, the files created with an Atari DOS/DUP or most of the existing carts converted to binary files will have those overhead bytes. Easy way to clean them up on the Atari is just read the first 6 bytes of a file and toss them, then read the rest of the bytes and save them. Another way of doing it would be to use your EPROM burner's monitor to start burning 6 bytes past the start of the file, i.e. something like give it address $005 to $1005 to the range of the file to burn. I'm not familiar with your particular burner so I don't know and am having a brain fart this morning.

Anyway, a reasonable thing to practice with would be doing a binary save
of the built in BASIC, $A000, $BFFF and taking a look at that. The
header will be
$FF
$FF
;tells DOS binary load file so the next bytes will be
$00
$A0
;Start address of load
$FF
$1F
;$1FFF or 8191 bytes? Or should it be $00 $20? Been too long.
;from here on is the actual cart image.

Another way to insure the overhead bytes won't get into your file would
be to write it on an IBM with something like TASM. If you want the file
to run on an Atari you can set up the header bytes doing something
similar to what Russ did to place them there with the .byte directive.

Well, I'm really going to write the code on an 800xl and the port the code to my pc, and then burn it to a chip using the willem programmer.

I'll be porting the "assembled code" to my pc, (I'll be using Mac/65 assembler.)

Are there any examples of the autoboot header code on the web? I would like to see how it looks in a real program.

Thanks again, I appreciate it.
Tony

Hi, Tony. I don't believe there is any 'autoboot header' for Atari carts.
The EPROM just has
the INIT and RUN locations that the OS looks
at on powerup. Disk programs have a header,
like Rick described, but that header isn't in
the Atari cart.
You have to burn to $BFFE/F and $BFFA/B
the pointers to INIT and RUN. Atari needs
no further info to function.
Writing the OBJ/COM file from Mac/65, you'd
have to simply get rid of the 6 byte header that
M65 produces, which would be easy. Can
do with a BASIC program to your .OBJ file.
eg.
10 CLOSE #1:CLOSE #2
20 OPEN #1,4,0,"D:FILE.OBJ"
22 OPEN #2,8,0,"D:OUTFILE.ROM"
30 TRAP 100
40 FOR N=1 TO 6
50 GET #1,X:REM DISCARD 6 BYTES
60 NEXT N
70 GET #1,X:REM GET REST OF FILE
80 PUT #2,X:REM WILL ERROR AT END OF FILE
90 GOTO 70
100 TRAP 40000:REM TURN OFF TRAP
110 CLOSE #1:CLOSE #2:END
```

I see. How would this above code look in assembly language?

I appreciate the help and info.

I can't translate it easily, that's why BASIC is
useful. But here's a small example of Assembler
that moves the screen memory and display list
down below $A000, so that you can load
a cart into $A000-$BFFF. Just a short
example of Atari assembler.

10 CIOV=$E456
20 IOCB=$350
30 RAMTOP=$6A
32 *=$600
40 LDA #$0C
50 STA IOCB+2
52 LDX #$10
60 JSR CIOV
70 LDA #$79
80 STA RAMTOP
0110 LDA #03
0120 STA IOCB+2
0130 L1
0140 LDA EDITOR
0150 LDA L1+1
0160 STA IOCB+4
0170 LDA L1+2
0180 STA IOCB+5
0190 LDA #$08
0200 STA IOCB+$0A
0210 LDX #$10
0220 JSR CIOV
0230 LDA #$0C
0240 STA IOCB+2
0250 LDX #$10
0260 JSR CIOV
0262 LDA #$79
0264 STA $6A
0270 RTS
0280 EDITOR
0290 .BYTE "E:",155
0310 *=$2E2
0320 .BYTE 0,6
```

```
0330 .END
```

This really helps. One more thing, are you using the cartridge or file version that was distributed on the free version of SparatDOS?

You see if you are using the cart, it will occupy the $A000-$BFFF address space you want your code to run from. This leaves you the option of assembling to disk which means you would have to use a program like Russ gave to strip the header.

I don't have a set up Atari set up at the moment: I tried to get my SDX cart back from phantom but he doesn't respond to my emails or posts to the newsgroup. Going from memory I used the byte directive and mem sav. I also wrote all my code to be compatible with the Atari ASM/ED which meant I didn't take advantage of the Mac special features. SOOOO what should work is:

```
10 *=$A000; Start of cart address space
20 START; 16 bit label equal to $A000 in this case
30 RTS; OK, It doesn't do much Your LDA #0 stuff goes here.
40 INIT; Ditto except will be one byte more because of the RTS
50 RTS; Still not doing anything!
60 *=$BFFA; Move program counter to CART START address
70 .WORD START; will put the START $A000 at $BFFA-B
80 *=$BFFE; Same thing for INIT
90 .WORD INIT
```

You also have to set the cart flag for if you want to allow things like DOS to boot. If you are writing a word processor for example, you would want that to happen so you could save and load files.

Now from there what you want to do is boot w/o a cart installed, lower ram top to under $A000, use binary load to load the file. Now do a binary save of address space $A000-$BFFF and strip the first six bytes like Russ showed and it should be a pure binary ready to burn.

You see if the burner were on an Atari, those extra steps would not be necessary since when you loaded the file it would be in a contiguous memory block with the header not taking up space. I think MAC allows you to assemble with an offset so you can have the actual code at say $4000, but I never used that feature.

One thing you should keep in mind with MAC/65 is that it creates
heavily segmented output files. I believe there will be a file
segment every 80 bytes of actual data output and if I remember
correctly, the file segments will have full headers of their own. In
other words, within the file there will be:

FF
FF
00
30
7F
30
and then $7Fdata bytes here to be loaded from $3000 thru $307F and
then:
FF
FF
80
30
FF
30
again $7Fof data here for $3080 thru $30FF and then:

FF
FF
00
31
7F
31
again $7Fof data here for $3100 thru $317F and so until the end of
contigious code generation.

Short file headers also exist and are just as vaild, they only contain
the start and end code loading destination bytes without the double FF
"binary file type announcer" bytes.

Just something else to complicate things for you...

If I posted a very simple program that was assembled with mac/65 would
someone be able to add the code necessary to make a bootable eprom?

Very confused right now.

Thanks again for the info.

Probably. Kind of a lot to absorb but it will become second nature after a few looks at what goes on.

MAC/65 is a great assembler but it does have its quirks. I want you to know that you are getting a lot of options thrown at you because there are a lot of options for getting it done. We are kind of a liberal group here so you may get a few but won't get a lot of 'My way or the highway!!!' type posts.

There are even several ways to clean up the output that Lee mentioned. There was a program published by ANALOG<?> and you can use a MEMSAV disk which creates a file 'memory image' on your floppy so DOS and DUP don't bump into your code when they function.

2267. Adapter for Dell monitor?

Newsgroup: comp.sys.atari.8bit
Date: 2008-07-28 00:00:08 UTC
From: James Vipond <jvipond@boxbe.com>
Message-ID: <jvipond-1467BD.19000827072008@news.isp.giganews.com>

My stepsister and her family want to give me a Dell color monitor for my old Atari 130XE. Unfortunately, the connector is the wrong shape for the computer's monitor port.

Does a suitable adapter exist? I have searched Yahoo! Shopping and eBay without success. I would be grateful for any help.

Is that a VGA monitor?
The Atari can do composite and S3 with
the correct cable. Can't do VGA, unless
some adapter I don't know about.

AV Toolbox makes some adapters.
http://www.avtoolbox.com/upconpage.shtml
But with prices starting at $90 this would be an expensive way to go.

In short, it turns out to be a lot of trouble to try to use a PC monitor
with the Atari XE computer.

Thank you both, but I've taken care of the issue. I just attached an old
General Electric color TV set to the 130XE, and it works splendidly.

If that's a RF connection, I recommend a
composite connection, the monitor jack on
the XE and two RCA, one composite, the other
audio, to your TV.
The RF connection is the single RCA jack on
the XE.

If you want to emulate a real Atari experience, you can get
Stelladapter, which lets you connect Atari 8-bit joysticks to PC USB. :)

That reminds me ...

I love my Atari 8-bit Trakball. Is there a way to use it on a PC
(specifically Linux... the apple doesn't fall far) via Stelladapter?

I imagine all it would need is some driver that read the specific
joystick bits as they flew in from the Trakball. (Regular ball mice work
more-or-less the same.)

I should ask my Linux friends while I'm at it. :)

Man, talk about scatterbrained. I already asked this a coupla months ago. :)
But... I saw Quantum at California Extreme the other day, and am hankering
to make a similar game for Linux. A trackball would be the preferred way
of playing, IMO. :)

Hi,
Here is a search via google.com:

http://www.google.com/search?hl=en&rlz=1G1GGLQ_ENUS284&q=atari+sio2pc

this should answer most if not all of your questions.

Wouldn't your best bet be to develop on the PC, test the cart image file
using emulation and then when happy burn this to chip and test it on a real
Atari?

You recently posted to the AtariAge forum but didn't follow-up there. Here
are two useful threads relating to cart development:

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

UPDATES SINCE PREVIOUS POSTING:
2008.07.20 preamble: added links to resurrected faqs.org
2008.07.11 updated: epi, including TipConv 1.0.0
2008.07.09 Yoomp!: version 1.1
2008.07.09 added: Atari Fan Store (thanks Irek)
2008.07.07 HiassofT: Highspeed SIO patch for XL/XE OS and MyIDE OS V1.10
2008.07.07 MatoSimi: Fireball 1k
2008.06.09 MadTeam: Graph2Font 3.8.6.0, MADS 1.8.2.7
```

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

---------- Original Message ----------
Subject: Micropalooza '08 this Thursday and Friday!
From: "Ground Kontrol Classic Arcade"
<tower@groundkontrol.com>
Date: Tue, August 5, 2008 3:05 am

Ground Kontrol is pleased to announce the
return of Micropalooza, Portland's first 2-Day
Chiptune Music Festival! Chiptune music is made
using video games such as the the Atari 2600,
the Nintendo Gameboy and NES, as well as 8-bit
computers such as the Commodore C64. Though
more popular in Europe, Chiptune music is
quickly catching on in the US.

Ground Kontrol has been hosting 8-bit musicians
for years, including Micropalooza I and the
International Chiptune Resistance tour. This
year's Micropalooza features musicians from
all over, including Sweden! There were too many
artists to fit on one bill, so we made this year's
Micropalooza a 2-day event.

Schedule for Thursday, August 7:

DJ Moonchild is going to kick things off at
5:00pm and will be spinning in-between all of
the sets.

Kids Get Hit By Buses (Everett, WA) 5:55pm-6:25pm

Fighter X (Everett, WA) 6:40pm-7:10pm

Wyatt Gurp (San Francisco, CA) 7:25pm-7:55pm

Harbour (San Francisco, CA) 8:25pm-9:00pm

Trash80 (San Diego, CA) 9:15pm-9:50pm

Starpause (San Francisco, CA) 10:05pm-10:40pm

Two Playa Game (Sacramento, CA) 11:10pm-11:50pm

Square Wail (Seattle, WA) 12:05am-12:45am

Covox (Stockholm, Sweden) 1:00am-2:00am

Admission: $10, or $15 for a two-day bracelet!

Schedule for Friday, August 8:

DJ Moonchild kicks it at 6:00pm and will be
spinning in-between all of the sets.

Spamtron (Portland, OR) 7:00pm-7:40pm

Operation Mission (Portland, OR) 7:55pm-8:35pm

MC Firedrill (Olympia, WA) 8:50pm-9:30pm

Air Fortress (Portland, OR) 10:00pm-10:40pm

Leeni (Seattle, WA) 10:55pm-11:35pm

ComputeHer (Los Angeles, CA) 11:50pm-12:30am

8 Bit Weapon (Los Angeles, CA) 1:00am-2:00am

Admission: $10, or $15 for a two-day bracelet!

2288. Market for New Games

Newsgroup: comp.sys.atari.8bit

Message-ID: <4899a5b7$0$7345$607ed4bc@cv.net>
Source record: 3027

Hi all,

What are you thoughts about the market for new games for the Atari 8-bit? Do you think people would still want them? Would they sell or do you think they would need to be free? Should they target a 64k or 128k Atari?

I still desire to make some CRPGs and would love to make something for the Atari 8-bits. Anyone else already doing this?

IMO It would be a tough sell. CRPG players are in the minority in Atari fans compared to action games like River Raid or Star Raiders. There's also several fine games out there like Alternate Reality The Dungeon and Ultima III that you would have to compete with.

I still play Rogue and am a member of an MMPOG. I like the genre but it is a niche in my life. When I want a quick game while downloading something I may choose Rogue over solitare to burn a couple of minutes. I play the MMPOG when I want some interaction. It would be tough to find a niche that would make me consider setting up an Atari or booting an emulator.

I did start a CRPG years ago and it was one of a few projects that did not get finished. I had the 3d type view, character set, monster editor, et cetera finished for my part and was told by the person I was working with I had to switch to Rembrantt and a different character set. Twenty years later I am still waiting for them to finish the first picture and character set. ;)

I think a 64k Atari would be your best bet, since it would run on
nearly every system. I wouldn't go into it expecting to make a lot
of money, but I you might sell a few games if it's really good. Try
Atariage.com

"Staycation"? I love it.

I don't think Bravo Sierra Computers gets enough recognition for some
of the best Atari marketing continuing in the tradition of the classic
Atari commercials.

Last-modified: July 20, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

2299. Re: SIO2USB - is it worth $200+USD?

Newsgroup: comp.sys.atari.8bit
Date: 2008-08-14 20:22:16 UTC
From: cas_news@strotmann.de
Message-ID: <cone.1218745336.474436.30601.1000@csmobile2>
Source record: 3038

Hi Bill,

the SIO2USB was designed to be a real 'end user' device, with a professional case (brushed metal with engraved labeling for the buttons), a firmware that can be re-programmed from within the device and will even survive if you detach power while reprogramming.

The SIO2SD is also a fine device (I have both, SIO2SD and SIO2USB). If you know how to work with computer hardware like a normal Atari geek (and I guess you can), the SIO2SD is probably the same function for less money.

But for my grandma, or someone like 80+ year old Atari users like Dieter Gretschel aka Old Men Tower, the SIO2USB is the better 'ease of use' device.

Maybe it is like self-assembled PC vs. Apple Mac. Both do their job, The SIO2USB even comes in Atari XL like packaing, for the real 'un-boxing' feeling.

Sure, the US$ vs Euro rates does not help, I guess it is much more expensive in US then it is here.

Carsten

The SIO2SD looks like it should suit me, and for less than 1/3rd the cost
of SIO2USB. My needs aren't very high-tech. I've survived a long time
with, first a homemade SIO2PC that someone built for me, then more recently
one from AtariMax (caseless, and screwed up onto the wall behind my monitor).
I'm also a relatively technical user, when it comes to the Atari.

So I'm sure the SIO2USB is well worth the price, but I really think it's
way more than _I_ need.

Thanks for everyone's comments and suggestions!

2302. DarkForce winners/prizes for July/August

Newsgroup: comp.sys.atari.8bit
Date: 2008-08-15 20:24:38 UTC
From: "Ronald J. Hall" <darklord@suddenlink.net>
Message-ID: <pan.2008.08.15.20.24.37.767417@suddenlink.net>
Source record: 3041

Greetings everyone!

Here is the lucky winner for July 2008 at The DarkForce! BBS:

July 2008
1. TOS 2.06 chipset - jimarm wins this for his ST!

Also, here is the prize for August:

August 2008
1) A Mega STE motherboard (partially populated). This will
include a TOS 2.06 chipset - courtesy of Techie_Allison!

Check AtariAge and the AtariForums for a picture.

Congratulations to our winner, and good luck to this months callers!

:)

Source record: 3042

Folks, I've been unable to deliver last months prize, despite repeated attempts. The user "Cedric" posted an invalid address to his account.

Now I understand everyone's need for privacy these days, and it doesn't bother me a bit if a user starts an account with bogus information, like their age, phone number, birthday, etc, etc...

BUT...if you're expecting to win *and* receive a prize from us, then the least you can do is have an accurate address. I have a full time job, 84 hours every 2 weeks/12 hour nightshifts, plus a family of 5 and honestly, I don't have the time to chase everyone down. I've left e-mail with Cedric on the BBS and I hope he gets and returns it. Until then, there's nothing else I can do.

Just for the record - DarkForce has never lost any user information, due to being hacked, nor have we ever give out information to a third party.

Nor shall we ever.

Thanks to all our dedicated users and the Atari community.

2309. Announcing : 64JPX - JoyPad eXpander

Newsgroup: comp.sys.atari.8bit
Date: 2008-08-16 02:14:49 UTC
From: RobertB <rbernardo@value.net>
Message-ID: <040b6cf1-625e-4b31-aadf-94fb2d12ff54@v16g2000prc.googlegroups.com>
Source record: 3048

----------Forwarded----------
Nick (at) 64HDD
Aug 12, 10:42 am

Hi All,
I've been quietly working on a small interface to
adapt joypads and enhance their functionality
for Commodore and Atari users. Currently
support is for Sega Genesis/Megadrive and
PC analog controllers, and am finalising support
for SNES joypads. For details visit
http://www.64hdd.com/64jpx/

The enhancement modes I've included allow
you to "cheat" or enhance your experience in
a range of games such as racing, sport, platform
and blasters. I'm not so familiar with "beat'em
up" type games where you have combination
moves that may be simulated by 64JPX - any
info/help/suggestions appreciated ;)

Whether the interface becomes a "product"
depends on interest and feedback over the
next couple weeks.

Cheers,
Nick

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I'm getting back into th eold 8-bit computers. I just bought an Atari
800XL with disk drive and am in the process of reading all the FAQS.
My question, which I don't seem to have found an answer for yet is:
Will game cartridges for an Atari 800 work in an Atart 800XL?

Thanks

Hello,

Check out section 8.4. The translator disk doesn't work for cartridges.

The only two carts that don't work I can think of off hand are GORF and
~Escape from Cyginx 7. There is also a specialty programming tool cart
called Monkey Wrench that needs to be plugged into the right slot which
an 800XL physically doesn't have.

What's that second one, Escape...? I don't have it mentioned in the FAQ,
and I don't see it at AtariMania either. Who published it?

Any chance you were thinking of "Attack at EP-CYG-4" ??? A somewhat
similar title anyway.

Hi All,

The PCB has gone out for manufacture. The
final PCB ended up being very similar in
size to the prototype shown.

Now I need to finalise orders for the parts;
the micro being the most expensive - and so I
am hoping to avoid ending up with a huge
stockpile of them!

Plans are to support a variety of versions
based on feedback. Currently on the list to
offer are:

Sega only
Sega/PCanalog combo
Sega/SNES/NES combo
SNES/NES enhanced combo

I was surprised by the interest in the older
NES controller since it doesn't have many extra
buttons, but due to the interest I have decided
to support.

Note: SNES/NES controllers have a specialised
connector. The cheapest hack is to splice a DB9
connector into the original controller cable.
Instructions will be supplied for this, but
will require some soldering skills. eBay has
SNES/NES extension cables for sale. I have a
limited number which I can also provide as
pre-made pin-adaptors on a first-come-first-
served basis.

I will be working on finalising the software
whilst I await the components from suppliers.
Last chance for some brainstorming if people
want extra enhancement functions!

A dual-ported version worked out to be more
expensive than two individual interfaces, so
has been dropped.
```

Website has been updated with some extra
pictures.
http://www.64hdd.com/64jpx/

Discount pricing will be given to those that
pre-order by 28Aug2008. The early pre-order
information you supply will help me estimate
and budget for the parts that need to be
purchased.

Cheers,
Nick

I would be interested in getting the email version of your newsletter as
well. I have no problem with becoming a member and paying the $10
annual fee if that is a prerequisite. Please provide more details about
your group and newsletter.

I don't have a copy of that one, but I've begun mirroring some of the
Atari sites for personal use. Seems some of the really good ones have a
habit of disappearing from the Net.

Thanks Michael, that is the one I was thinking of. It was one of only
two or three carts that has ever went out on me so I haven't seen it in
20 years.

Rick

His sons were computer savvy and undoubtably used them.

FWIW: A president/CEO using a computer in the 1980s would have been considered something like handing George Bush a shovel to fix New Orleans.<Not that it isn't a reasonable idea but for punitive value>

The computer tasks available like word processing or spreadsheets would have been considered a waste of a CEO's time. That is what they have minions for; secretaries, bean counters, that kind of thing. Least we forget, there were Atari PCs so there is a good chance they were in play as opposed to STs.

CEOs only look at distilled data if they are doing their job. Balance sheets vs. individual accounts or paychecks.

Rick

Good point. I forget that things like the WWW and email weren't a part
of the corporate head's arsenal of business tools back then. I'm sure
corporate heads use computers for more than communication (email) now
though.

There's a lil paperback book I found that describes in detail how to
make bootable carts and tapes.
It's called
HACKERBOOK for your atari computer, tips+tricks
by H.C.Wagner, Elcomp publishing 1983

A very handy book indeed, check Ebay!

I got mine yesterday, had a little time to play with it. It was very
professionally made, the little buttons and screen are easy to use, and
I ran out and got a 1GB SD card from Radio Shack for $10.

Very cool. :) Now to hook up my old desktop PC and get my disk images
copied over to my laptop.

I don't understand what you're going to do with the
SIO2SD. Comes with an OS, right? You are
going to bring things from old PC to laptop.
What's that got to do with the SIO2SD?

SIO2SD is the modern version of the 1050, but instead of using floppies you
use an SD memory card to hold your programs. And you load the SD card with
Atari ATR's. The atr's are on his older desktop which doesn't have USB or
SD card reader capabilities.

What I'm saying is: a lot of my ATR disk images are sitting on a hard
drive inside a Linux PC that's currently 'sleeping' in the garage.
I need to copy them over to my laptop, so they're on a more 'active' computer,
and so I can copy them over to my SD card. (No card reader on the old
desktop, but the laptop came with one built-in. Thank you, Dell!)

Just to clear up any confusion... :)

OK, I see what you're doing.
One more question.
You have a 1 gig SD card. How does the 8-bit
access that? As far as I know the OS can only
handle 256 byte sectors and 16 meg 'partitions'/hard drive. I guess it
means you also put a different OS
in the OS chip place. 1 gig is ~62,000x16 meg.
Some OS ability.

Yep, I can at least attest to this with Leonard. Found a few JPEG pictures
stored on his hard drive. But then again, other male employees at Atari did
this too on TT030 workstations.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

The Atari doesn't actually see the SD card as a disk, which is, in
my opinion, good. :) The SIO2SD, for me, replaces a PC (Linux, Windows or DOS)
running SIO2PC-style software (SIO2PC, APE, AtariSIO). No hardware changes
necessary, no special OS necessary. Anyone with an Atari 400 can come to
my house and boot up off what's on my SD card. :)

With the little backlit LCD screen and various buttons on the device,
I can attach and detach disk images (e.g., ATR files), as well as (apparently)
stand-alone EXEs, which the Atari then boots into.

So I don't have 1GB of space available. I'm still limited to, what, 16MB
per disk, and 8 drives (D1: through D8:). But no more laptop is necessary.

2340. FS: Atari 850 + Telelink cart

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-03 18:25:33 UTC
From: bill@newbreedsoftware.com
Message-ID: <48bed69d$0$17227$742ec2ed@news.sonic.net>
Source record: 3129

I received this from a friend, and sadly have no real use for it...

I've got an Atari 850, photocopy of the operator's manual
(with a note stapled to it: "We have included a photocopy of the
Operator's Manual in order to expedite initial delivery of the product.")

I also have a "Telelink I" cartridge that I have no use for.

I don't believe I have a spare power supply for the 850, though.

Asking $20USD plus shipping. Email me privately if you're
intererested. Thanks!

(Craiglist idiots decided an Atari 850 was not appropriate for the
'computers & tech' category. >:^P)

I bought mine from Marcin Prusisz (Pigula/Shpoon), at the suggestion of
Jakub Kruszona-Zawadzki, who designed it
(http://sio2sd.gucio.pl/index_en.html).

Marcin has a page here: http://marcinprusisz.pl/?p=p_22&sName=sio2sd
but it's in Polish.

But I just emailed him directly, paid him via PayPal, and received
a fully assembled and working SIO2SD, a CDROM of Atari software
(which I _accidentally sent to Netflix_ instead of the latest movie we had!!?)
and a nice color manual (in English; I guess it used to only be in Polish :))
I believe it was 45Euro, which came about to about $70 USD. That included
shipping, btw.

It also included a cable (SIO on one end, small plug that goes into the
SIO2SD on the other). I bought a 1GB SD card at Radio Shack for ~$10USD.

I've had very little time to enjoy it, so far. Busy working, tending
a baby, having my car totalled by an idiot who ran a stop sign, and
just moved across town. But -- it rocks.

I think I need to (sadly) sell my MyIDE. No use for it. This is a way
better soloution for me. (Smaller, easier to use, compatible w/ all software,
way easier to get disks on... pretty much kills my need for SIO2PC, too!)

2349. Atari 400 video hookup to a Commodore 1702 monitor

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-10 00:30:44 UTC
From: personable85 <personable85@hotmail.com>
Message-ID: <a7d89e86-5f90-4ff3-96a0-24ef5ebe785d@59g2000hsb.googlegroups.com>
Source record: 3138

Does anyone know how I can hook up an Atari 400 to a Commodore 1702 monitor? I'd like to avoid using a RF box as part of the hookup if possible. Any help would be greatly appreciated!

Thanks!

Mark

Googling around, it sounds like the 400 lacked the composite video out
that you'd need to hook it up to a C= monitor. :^/

It might be hackable, but I'm more of an XL person, so I dunno offhand. :)

Yes, it can be done, but, the 400 is built like a tank.
I think I have the schematics here, but, I need to dig
them out and see what's what in there. Give me a few.

Mark,

I emailed the drawing to you. Just to
simplify what's what, on the Din-5 jack,
Pin4 is composite video, and Pin2 ground.

Good Luck.

I'd apologize, but, my posts don't claim that the 400
has that connection. Only that that connection has
those signals on it. Read, don't skim, thanks.

I emailed him the drawing from within the 400 that
shows where the composite video is.

2361. atari++ 1.55 beta released

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-12 18:04:36 UTC
From: Thomas Richter <thor@math.tu-berlin.de>
Message-ID: <gaeauisfo1@infosun2.rus.uni-stuttgart.de>
Source record: 3150

Hi folks,

please find a new release of the atari++ emulator at its usual location

http://www.math.tu-berlin.de/~thor/atari++/

for download. This time a beta-version only, and - since unfortunately
one of my machines broke down - for Linux only. There will be a windows
version as soon as my primary development machine comes back from the
repair, and as soon as this version has been tested more carefully than
a single person can do.

What's new this time - the major thing is probably a fully compatible
Atari replacement Os (also available separately on the above page)
including the math-pack, but there are other news:

- Fixed a couple of bugs in the disk emulation, thanks to
Konrad Kokoszkiewicz for finding them. Specifically,
- Read and write capacity (815 commands) did not check for
all supported disk layout types and hard-disk partitions,
- Speedy commands were recognized and interfered even if
the speedy emulation was turned off,
- Disk status wasn't returned correctly for high-density
drives
- Fixed a parsing/error handling bug if the initial con-
figuration files were incorrect.
- Fixed the implementation of ZFR1 in the mathpack patch.
- Fixed the implementation of FFRAC in mathpack patch.
- Added constants required by BASIC for the patch.
- This release comes with a new release of Os++, the
emulator operating system. For the first time, this
release is complete and includes a math-pack whose
functions should be both faster and more precise than the
original implementation. Thanks to B. Watson for
continuously pushing me - it's done now.
- Minor streamlining in the CIO implementation in Os++.

Again, special thanks goes to the contributers!

So long,
Thomas

2362. Atari Cartridges or disks?

I have a few Atari 2600 era joysticks (various brands/models) available
here in Davis, CA for free. Email me if you'd like to come pick them up.

I've also got an Atari 2600 "Indy 500" rotary controller (you can dismantle
it to create a controller for Tempest 2000 on the Atari Jaguar...) that I
think I can part with. Asking $7 (plus shipping, if you're not in Davis).

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

2366. Free: Delta Drawing, Assembler Editor & AtariMax USB cart

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-14 00:54:51 UTC
From: bill@newbreedsoftware.com
Message-ID: <48cc60db$0$33513$742ec2ed@news.sonic.net>
Source record: 2955

I'm getting old. I have a baby. I think I don't have much use, these days, for an Assembler Editor cartridge or Spinnaker's "Delta Drawing" learning program. (Kind of like Logo's turtle graphics programming, but single keypresses for commands, and more interactive.) (FYI, I've had Delta Drawing since 1983, when I first got my 1200XL :))

I've also got an AtariMax USB cartridge that MIGHT BE BROKEN (damnit!). Last I recall trying to use it, it didn't seem to work right (this was about 2 years ago now?), and it _sounds_ like something's giggling around inside. :(

Will send one or more of them to you for the cost of shipping.

(Finally, I think I'm done purging old software. Oh wait, I've got some PlayStation 2 magazine demo discs I should rid myself of. :))

2367. In search of Bob Woolley

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-14 00:57:06 UTC
From: bill@newbreedsoftware.com
Message-ID: <48cc6162$0$33513$742ec2ed@news.sonic.net>
Source record: 2956

Has anyone been in contact with Bob Woolley? Yeaaars ago he took my 1200XL
to add a hard disk and do some other upgrades to it. (Nowadays, I mostly
miss the 1200XL due to the keyboard, and with SIO2SD and SIO2PC I have little
use for much of the fancy upgrades Bob's into. :))

I had his number in Alameda, Calif., and a few years ago tried contacting
him a few times, but my calls and emails were never returned. I admit
I haven't tried recently, but thought I'd ask here in case anyone out there's
already in contact with him.

Thanks,

Probably because I am getting to fat and old to be seen in public!

I was thinking about you and your 1200XL predicament. Story goes something like: San Jose Computer sold out 1200XL motherboards only at maybe $6 or $12 each. I'm 100% sure Bob gave me one, not to sure I ever paid him or returned the favor. I think I gave him something he didn't really want or need, J/S RS232 or something.<grin>

I may or may not have a keyboard or plastic to go with it but I may be able to piece together something. Probably no RF shield available.

I think I have mentioned back to back significant others who raged against my Atari hobby. So tomorrow the little woman is going on a day trip with her parents. That should give me 6-8 hours of unfettered rumaging to see what if anything is left. No promises but I think you can see the circle here. Bob gave me one, you gave Bob one, my turn to close the circle.

I'll post tomorrow night if I am not caught in the act.

Rick

OK, kind of caught in the act but got nothing but evil "I thought I told you no Atari in my sight" look. I need to fix a power supply, I just had a piece of solder replacing a fuse, and see if any are mother boards booting. I have ~3 keyboards so I am pretty sure something will work. I'm kind of leaning towards a stock OS 1200XL with 256k Rambo if that is OK with you. Top and bottom plastic is there but little piece that covers the J/S, cart port, and power switch is no where to be found.

Found my Action! cart. Apparently it was in the cartridge port of one of the computers she sent cartwheeling down the stairs! I have one IMHO nice 1200XL with dual OS, 256k, built in basic, et cetera that I haven't been able to get to yet. If I dig it out I may try setting it up in a little 100^2' cabin I built on my property: S.O. never goes there! If You need anything like Omnimon I may be able to clone that one. If you are happy with a 256k 1200XL just send me your address and I will get it to you in my normal 2-3 weeks of waiting to find the right size box and making a trip to the post office. I'm getting slow too, probably take a week to solder that one fuse and hack up a monitor cable to test the MBs.

Rick

No Rick, your words were keep it for a year or so.
I did buy another one after you sent yours so update your records.
You didn't seem to want it and I just put it in a box.
You will need to give me your addess again if you want it returned.
I know you have mine.

I don't know of what Mike you are speaking of in July 2005.
Do post that E-mail as I don't seem to have that one.
You seem eager to drag other people into to this.
I've nothing to hide.

I don't fancy threats, however.

Mike sent me a 4.21 upgrade chip that didn;t work. He finally ended up
sending me a complete 4.21 cart. I was very greatful for that.

But ya know, I really didn't see the difference in day to day use.
Unless it was something that I normally didn"t use.

>>
>> I think SDX 4.21 ROMs are out there in cyberspace but I don't know
>> where. It would take a major effort on my part to get the Tandy set up

I just ordered a Willem Programmer, that does Eproms, EEproms and
a bunch of other chips. It works on a PC. I ordered it especially
for Atari 8 and 16 projects. But I will need to order a cheap adapter
to do 16 bit Eproms.

I should have it in about a week. Maybe I can burn a 4.21 chip?
I have a copy of the ROM Image.

>>

I can see how that would work. However, on the SDX chip, there were
actually
some rust and corosion that was touching other pins.

I just took a pencil eraser and gently clean that off.

I think it will be ok, I will try it out today.

If the wife doesn't throw a fit.
Dam she hates Computers!

>> No. Only two computers are allowed in the living space. Mine which

WOW, almost sounds like my situation at times.

BTW is she on Anti-Depression medication?

My wife like to play hide and seek with my computer stuff.

She will hide it, and I'll have to seek it out. Especially with
anything new that I get it. As I have a room full of stuff.

Hopefully this Fall, this will change. I have a building beside
of my dads business, that i plan to move all my computer

stuff into, so that I can do as I please without the
disruptions.
My kid will be in school, so I will have sometime for projects
and stuff.

My wife is pretty cool about stuff, It's just she wants no more
computers and things of that sort in the house.
Big waste of time in her opinion.

I have lost a Falcon 14meg memory board, PowerSupply and
a few other goodies that I know she must have threw out as
I can find anywhere. I have backups but God those can be
hard to find and expensive.

>> I found it. Some water damage/mold but none of the pages are stuck
>> together. I'll try and send it out next week. Same deal; use it as
>> long as you want and send it back when you are done. Kind of black
>> humor but I be thinking she is a 49 year old chain smoking alcoholic.
>> I'll probably be able to pick up my Atari hobby shortly!
>>

Great about the manual! That will be a big help.

Ahaa haa hee hee, thats funny.

Want to play with her mind? Start hiding her panties and personal
things. She will go nutts!!!

Anyway, I'll take care of the SDX cart for ya. And if all goes well I'll
try it out
today. I need to hook my 8-bit up to a TV as my monitor went out on me.
I think I can fix it, but I found a similar one forsale cheap and bought
it.
It will be a week or so before it arrives.

If ya need anything or just want to chat, just hollar.

I guess your wife would rather you
spent your free time in front of the
TV scratching your arse, and eating
chips and sucking soda pop. ;-)

Don't mess with her stuff, because
then she'll do more than hide yours,
she'll destroy it.

This is just one more reason that I don't
have a partner living with me. ;-)

Very funny.
Anyone can edit a e-mail and post it.
It's a shame you have nothing better to do
than post lies about someone.
About what I expected,

I'll tell you what, instead of me mailing the cartridge,
How about I come in person and deliver it.

For some strange reason it is only my Atari stuff. I mean she is sort'a tolerant of my other stuff. I have several motorcyles, two boats, a dog, fishing poles, , tools, garden, what have you. Something with an Atari logo on it is like waving a red flag in front of a bull! It ain't natural.

Here is a post on the internet from you:
http://newsgroups.derkeiler.com/Archive/Comp/comp.sys.atari.8bit/2006-02/msg00034.html

Over a year after you said my 4.19 version was flaky and unusable. Can't
fake Google archive. Sorry, you lose.
> I'll tell you what, instead of me mailing the cartridge,
> How about I come in person and deliver it.

LOL! Look, here is my problem. There are only two options here

1) You are going through dementia for one reason or another. I suspect
drugs and alcohol. In that case I should let it slide since my friends
in RL and the newsgroup who know me expect me to be a bigger person.
Beating up on an obvious mental defective would be out of character for me.

2) Terry Ortman has gotten out of prison and is using

Barry Shortridge
P.O. Box 210
Mouth Card KY 41548

As a new identity.

In any event, Terry Ortman or Terry Ortman work alike, people will
consider this a fair warning not to deal with you. Our unofficial policy
is not to feed the trolls or reply to the Terry Ortmans of this world.

You have no intention of giving me my cartridge back, I've figured that
much out. You're just a small time liar and petty thief, not John Gotti.
You have no intention of showing up here as at this stage I doubt if you
have a drivers license, car, or money for air fare. You don't evoke any
response from me but pity. I wish you much healing from whatever daemons
are plaguing you.

Rick

You're right. There is something whacked out there.
Have you tried to discuss that with her? Does she say
something like "I don't know, it just makes me nuts?"

More like "The topic is not even open for discussion"

I figure it is something primal like ~nest building. She needs her
beading room, although she has not beaded anything in maybe 10 years and
a sewing table, although she has not sewn anything in 7 years. We both
get computer desks in her scheme of things but I am limited to my
Windows computer.

When I built a small cabin for her "beading and sewing" hobbies in the
hope I could use some of the freed up room in the house for hobbies I
actually do, I kind of got read the riot act about how clueless I am.
Something about how I'm subverting the whole point of being together.

It's probably one of those things you have to be a woman to understand.
I mean if someone would have spent weeks and thousand of dollars

building me an extra room for my hobbies I would have been tickled pink! But then I am a guy so I am not familiar with the ways of a woman. Near as I can figure out is we are supposed to have male and female hobbies and exercise them in the same general area. Almost seems to make sense in some Martha Stewart/Good Housekeeping type ethos. I know of at least one other Atarian certainly better known and more talented then myself that is relegated to his attic.

But heck, I will occupy the cabin and see if my ST still boots and get at least one of my 8 bits running. I know there is something that will jump up and bite me, like I was supposed to build his and her cabins because of the Martha Stewart togetherness thing.<grin>

Rick

Fortunately my wife understands that Atari was my first love, so while she does suggest culling things now and then, she actually prevents me from getting rid of some stuff sometimes. (Why I still have an Atari 2600 TV Paddle Games.)

Right now, though, mostly because of our baby, my Atari computer is living inside a drawer under the TV. And mostly it's the baby's poking at things that prevents me from using it much right now. When he grows up a bit, and can actually enjoy video games (more than the amazingly fun power switch), I think he and I will both enjoy all my old toys. :)

BTW - There was an article in some magazine recently about how men need their "man cave" in their home... be it the underground bar and pool room, or the computer dungeon, or the workshop in the garage. I guess my 'man cave' is my laptop + local coffee shop, for now. :)

I"ve been married forty-five years, and feel I should
share some experienced wisdom here.
However, all I can say is 'I know nothing.' in
a Charles Shulz sorta way (Hogan's heros).
I can say I enjoyed my Ataris more with my
grandson than I did with my son. My grandson
went through about a 6 month investigation of
Atari, and got me to give him a 1200XL, and
an old notebook to APE with. He used it some,
but the Wii and internet real-time games are the
present interest, along with Magic cards (1000s of
them.)
I hope I've given you some sound information.

That's where you went wrong. Women want to be understood, men like to fix problems. She said 'I'd love to have a nice place to sew'. At this point the Correct Answer would have been 'I understand that, wouldn't it be great, you could do x,y and z and have all your stuff there'. She'd then be happy. Instead you built it for her, not what she wanted at all. Now your several weeks and $K down and she sees it as you trying to get her out the way so you can get up to nefarious things.

Well put. Women actually just want to be acknowledged,
and to know that you still care. After that you will
be free to go on and do what you like.

FYI, a single Rose is better than 2 dozen.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

2404. 64JPX now available (fwd)

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-24 03:27:39 UTC
From: RobertB <rbernardo@value.net>
Message-ID: <642182a1-566d-4c42-87d0-6172094b7fff@a70g2000hsh.googlegroups.com>
Source record: 2993

From: Nick @ 64HDD
Date: Sep 23, 10:29 am

Hi all,

64JPX is now available for sale from the www.64hdd.com
website. For those who haven't been following developments,
64JPX is a micro based interface which allows connection of
Sega, SNES, NES and/or PCanalog controllers to be used
with Commodore and Atari compatible systems. In addition
to doing the signal conversion, the interface offers a number
of "enhancement" modes tailored to various game genre.
http://www.64hdd.com/64jpx/ has all the info.

Enjoy,
Nick

2405. atari++ 1.55 final released

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-24 16:04:58 UTC
From: Thomas Richter <thor@math.tu-berlin.de>
Message-ID: <gbdofa$tg6$1@infosun2.rus.uni-stuttgart.de>
Source record: 2994

Hi folks,

please find the final 1.55 release of the Atari 8-bit emulator "atari++" at its usual location at:

http://www.math.tu-berlin.de/~thor/atari++/

Basically, bug-fixes from the 1.55 beta release announced a couple of days ago. Mainly, a couple of pokey issues have been fixed, one issue in the disassembler, and a couple of issues in Os++, the built-in freestanding operating system you'll also find on this page in source form.

From the history:

Atari++ 1.55
- Fixed a couple of bugs in the disk emulation, thanks to Konrad Kokoszkiewicz for finding them. Specifically,
- Read and write capacity (815 commands) did not check for all supported disk layout types and hard-disk partitions,
- Speedy commands were recognized and interfered even if the speedy emulation was turned off,
- Disk status wasn't returned correctly for high-density drives
- Fixed a parsing/error handling bug if the initial con-figuration files were incorrect.
- Fixed the implementation of ZFR1 in the mathpack patch.
- Fixed the implementation of FFRAC in mathpack patch.
- Added constants required by BASIC for the patch.
- This release comes with a new release of Os++, the emulator operating system. For the first time, this release is complete and includes a math-pack whose functions should be both faster and more precise than the original implementation. Thanks to B. Watson for continuously pushing me - it's done now.
- Minor streamlining in the CIO implementation in Os++.
- This release adds a STDIO interface to atari++, allowing it to read keyboard or editor input from the command line, and echo-ing output to stdout. This feature can be used for batch-processing.
- Compared to the beta release, this version fixes one bug in the BCDToInt math pack routine (also known as FPI) which did not handle carry-over correctly.
- Writing 0 to SKCTL now also resets the pokey timers as it emulates the POKEY soft reset.
- Pokey STIMER also resets the poly-counters now, as it should.

- Os++ includes minor fixes for the cursor rendering and interaction of S: with E:. Writing to S: now shields the cursor correctly.

Greetings,

Thomas

If anyone has photographs of computer retail setups from the 80s and early 90s, I urge you to post them to the web somewhere. It would be particularly nice to see the old Sears setups and the showrooms of stores local to your home town, for nostalgia.

Guess those displays must have been a happier memory for people in the States,
were you allowed to use the computers on display?

Here in the UK a particular consumer electronics chain put a bunch of systems
ready to use within easy access of people, and then the store assistants
were told to go ballistic if anyone even touched the things.
How sad is that?

> Guess those displays must have been a happier memory for people in the States,
> were you allowed to use the computers on display?

I live in the USA and as I recall, we were always allowed to play with the machines. I specifically remember playing with them in Sears, Radio Shack, BEST, Service Merchandise, Electronics Boutique, and Target. Although, most of the Targets did not have the machines operational. I also remember seeing the machines in Toys R Us, but I can't remember if they could be touched or not.

In fact, I would venture to say that as a kid, my favorite store to go to was Service Merchandise. The reason is that they actually had computer tables setup with chairs and everything where you could comfortably sit down and use the computers. They stores weren't busy usually, and there were very few kids. So unlike today with the game machines, there were no fights over who was going to play on them next. I sat down in front of the machines for hours sometimes while my parents shopped around. The employees never seemed to car as long as I was just sitting there typing. They had 3 or 4 different desks and computers setup. Usually they had a Commodore 128, a Commodore Colt, and some other kind of PC setup on a different table that had VGA graphics as I recall. That was the setup for the longest time.

Unfortunately, none of the stores ever had any software running on them, so I usually just played in BASIC on the Commodore units. Sometimes I'd write programs and leave them running for other customers to find.

I do recall that Electronics Boutique had Amigas on display and they would actually have games running on them.

Yes.

> How sad is that?

Our local Atari dealer was Software Alternatives. Had a really great guy
for the owner - encouraged everyone coming through the door to grab stuff
and play with it. He sold hardware, software, and did repairs. One time, I
managed to blow parts of a SC1224 monitor and my ST's sound chip up, when
I tried to put stereo speakers in the monitor. I took it to him for
repairs and he had it done the next day - he asked me if I had tried to
hook the monitor up to an Amiga...I laughed so hard I almost cried. :)

One of the saddest days ever for me, when he announced he was closing up
shop. Still, it was a happy ending of sorts. This guy made a small fortune
off Atari, and when he read the writing on the wall, he managed to get out
while the getting was good and retired to somewhere in Florida. Last I
heard, he was still doing great. I'm always glad to hear those kinds of
stories, instead of the usual "I lost xxx money with Atari" kind. :)

I liked the Kmart - they had nice kiosks of Commodore and TI equipment.
And this was '82, when TI hired nice-looking young ladies to demo their
equipment! I remember the one at our Kmart gave me her home phone number!

Stupid me, being the uber-geek I was, I called her alright! To ask her more
about the TI-99! (argh!)

I, too, liked to key in programs on unattended displays, like a FOR-NEXT loop that would give me long enough to vacate the store, then a CALL SOUND with all the voices set to full blast. I'd turn the volume up on the monitor/tv just as I left...

I don't remember Service Merchandise having computers - ISTR that the one in our area closed about two years after I got my telescope through them (this was probably 1979).

I did a lot of shopping at Toys-R-Us (got my Extended Basic cartridge there - $99) and Eckerd's (got Tunnels of Doom there, for $29, it was supposed to be $60 but my friend at the register sold it to me for a sale price that did NOT apply to Tunnels of Doom)...

These days you can walk into a Best Buy and play with the computers, but it isn't the same. The computers are too much alike, and their demo videos are way too boring.

And their "extras" are too "end-user", meaning I was shopping for either a NAS hard drive solution or USB/Firewire. Only the $300+ NAS one was RAID capable, the others were not. I'd like to find a store with hard drive enclosures that offer RAID or not that would allow me to insert my hard drives of choice and do some configuration. We are not *all* blooming idiots these days, some of us still like to choose!

Definately. I never play on demo computers. I mean, once you've
played with Windows on one computer, there isn't much difference on a
different one. I used to like to play on the computers in the stores
because the only platform I knew was the C64 and Vic-20 and so this is
how I first played with MS-DOS, the C128, and even the Amiga for that
matter. Can't remember ever seeing any Apples or Macs on store
displays, but we had those at school and I didn't like them at the
time. I also briefly played with some Atari 8-bit computers at some
store, but I can't remember which store it was. Never could do much
more than type in a few rudimentary BASIC programs, though.

The machines were usually behind clear plastic locked doors, mounted on giant racks. Remember plucking the cards off of their rings and waiting in line at the merchandise booth to pick up your goods? There was fun in that anticipation, lost in this age of instant gratification!

> In fact, I would venture to say that as a kid, my favorite store to go

Ditto!

I spent a summer writing, in BASIC, demonstration software for the C64 and C128 that I would slip into any machines that happened to be running. A curious SM floor manager accosted me, in a very friendly fashion mind you, to ask what I was up to. After I explained myself, he was so delighted he gave me my choice of any piece of software for free. I think they ran my demo until the very last day they sold 8-bit machines.

I remember back then, anyone could touch it and even play with it a
bit. Game carts were chained in to prevent theft but the main systems
were often not chained so if you had bulky coat you could probably
grab a free C64 back then.

The last time I saw any Commodore stuff at Sears, it was the newer
C64-C and a 1541-II drive missing the disk latch lever.

Stores still leave the PCs out on display today but they are often
password protected to prevent software tampering and the keyboard and
mouse were strapped down. Laptops were also bolted in a security case
that allows only the keyboard to be touched.

Was that the same BEST as this?

http://www.best-electronics-ca.com/

They're still down in San Jose. I sadly failed to go visit them during
business hours during the coupla years I lived near SJ.

There's also B & C ComputerVisions, who are still around, and moved out
to El Dorado, California.

Here in Melbourne Australia where I live, back in the 80s we used to ride our bikes down to Myers (massive dept store) where they had most of the 8bit machines in display. The TI, Sega and Spectrum computers mattered little to us because we were C64 owners and were there to check out the latest game(s) that came in stock. The display computers were all powered up and functioning and the staff almost never left the counter, i guess they figured kids weren't going to buy the hardware so why bother. They would happily open a software package for us to "try" if they thought there was a sale in it though.

What they didn't realise is we often went down there with a copy of Fast Hack'Em, asked to see the latest game then copied it and went home :)

In earlier times before I got my C64, I would go to K-Mart with my parents and while they sought out whatever it was they were going to buy I sat myself down in front of the demo C64 and kept myself busy. After a full year or so of doing that one turned up for Christmas :)

Mike

Yep.

I always wondered why the left it layed out like that (and with the Fn keys),
when none of the other XLs had them. Weird.

Don't have pictures but do have plenty of memories.

The store called Video Concepts in Hulen Mall in southwest Fort Worth always had an Atari 800 system set up in the rear of the store, hooked up to a big projection TV with _Star Raiders_ playing. This was in the early to mid 1980s. They also kept the ceiling lights dimmed back there to enhance the effect. I think this is the same store where I also saw audio CDs for sale for the very first time, when they were brand-new. Extremely expensive then. I never bought anything at this store because they were so expensive.

ComputerCraft was a rather large store in a shopping center a couple of miles down the road. They had a few high-end PCs or clones on display there. It was geared more towards the professional business computer user and not kids. The entire store was carpeted and resembled an office environment, IIRC. (Back then an IBM PC XT with a 10 MB hard disk cost well over $2,500!) Today that store, if not the entire chain, is long gone.

I used to haunt the local Radio Shack because they almost always had some computers up and running on the showroom floor. Usually it was the Color Computer. At this time (early 1980s), RS also sold some books filled with short BASIC programs. I enjoyed typing those into the demo units.

Some of the Best stores in Texas are still open. However, K-Mart closed all
of their Texas stores several years ago. Service Merchandise is gone too.

In this area, Montgomery Ward used to have good computer displays set up.
They are gone too. :-(

I used to type in a program something like this (C128 version)

```
10 SCNCLR
20 PRINT "TYPE YOUR NAME AND PRESS RETURN"
30 INPUT A$
40 PRINT A$+" ";
50 GOTO 40
```

The fun was in lurking nearby to watch as someone fell for the bait. First they would stare in awe as their name filled the screen. Most had no idea how to stop the programs endless loop. Then as their name continued to scroll all over the screen, many would become nervous, thinking they had broken the computer.

Some would sneak away as if trying to escape before their blunder was discovered. An occasional honest soul would ask the clerk if they would have to pay for the computer they had just broken.

Some of the clerks were wise to me, and would grin at the customer, then point at me and tell the customer, "I saw him playing with the computer just before you came along. I think he may have done it!"

Computers were more fun back then. ;-)

You must live very near me. I live a few miles from that very mall.
But I never went there as a kid because my parents never went there.
So I have never sen the display you are taking about.

No, that's a different company. Best was (is?) a department/catalog
store sort of like Sears, etc, just not quite as big. I think central
states only? I'm not sure how far east/west they spread. They were
well known for some of their very unusual buildings. One in Houston,
TX looked like it was falling down. Big pile of bricks tumbling down
from the top of the building and such.

There's another one that from the outside the building looked like it
was sinking into the ground on one corner and was tipped about 5-10
degrees. Crazy architecture... The buildings were featured on an
episode of Ripley's or That's Incredible or something like that back
in the 80's...

Best Electronics I think has always been just the one company in CA...

I can still remember the first computer program I ever learned:

10 PRINT "WELCOME TO RADIO SHACK";
20 GOTO 10

:)

The RS I used to hang out at all the time always had that scrolling
diagonally across the screen of the demo model TRS-80 Model 1. I
actually had to write it down so I wouldn't forget it... I probably
still have the piece of paper somewhere.

I can go back a few years more and recall the Santa Rosa Computer Center (I think that's what it was called), BYTE Shop and ComputerLand (when they had Ataris and PETs) A lot of various computers S100s, Ataris, PETs, Compucolor (ooohhh such nice color back then, even the keys were colorful!), and Apple [[s. Tons of cool computer books and magazines and uber cool devices like wide carriage dot matrix printers and flatbed pen plotters. Also the full wall wallpaper of the moon (lunar surface and forest scene wallpaper was one of those 80s fads) at one had a dot-matrix mural of the moon. Those got my introduction to creative computing magazine and BASIC computer Games.

I used to write BASIC demos on the Sears/Kmart 64s, while my folks were shopping something like:

```
10 for x = 0 to 25
20 ? tab(x);:? "Larry Was Here"
30 next
40 for x = 25 to 0 step -1
50 ? tab(x);:"Larry Was Here"
70 next
```

Later on I had memorized how to code a sine wave and would write a sine messages instead of a zig zag, also changing text color, etc.

One xmas we went to my brother's place in Oregon and I got to get to play an Atari 800 w/ Asteroids and Missile Command at a store (most didn't have Ataris as accessible as 64s), that was something. I also remember in the same mall there was an arcade with tail gunner and some other great Cinematronic games (new then, classic now)

2436. 130XE Keyboard Socket

Newsgroup: comp.sys.atari.8bit
Date: 2008-09-26 05:26:58 UTC
From: Edward Goodsmith <egoods@gmail.com>
Message-ID: <be1f0e7c-103d-486e-a89b-a4490808bbf6@t54g2000hsg.googlegroups.com>
Source record: 2825

The keyboard on my 130XE wasn't responding to quite a few inputs,
using a wire to see if it was the connector I concluded that yes, the
connector was broken, I can't get my fiberglass pen down inside there
to clean it and contact cleaner didn't work. I'm thinking I want to
replace the connector but I have no idea what to search for, would it
be called a 24 pin ribbon cable socket? or something similar to that?
or am I totally wrong with what it's called. And yes, I checked all
the traces on the Mylar thing, they seem to all be in working order.
Thanks for any help!

I worked at a computer store in Germany on Ramstein AB. The Audio/Photo Center.

We had Vextrex, Kaypro, Zenith Z-100, Z-150, Apple IIe, IIC, C64, Epson and a few others, but of
course the commodore 64 was my choice.

I used to put up a color bar program. With the Apple IIC and the crappy little green monitor, we
always sold out of Commodore equipment before anything else.

```
10 PRINT"{Clr Screen}{Rev On}";:FOR x = 0 to 15:POKE 646,x:FOR y = 0 to 39:print
"{Space}";:next y,x
```

16 rows of color bars

Nice one liner that sold many a 64 back in the day. Not to mention the disk of the day I would
leave in the 1541 which of course had a disk copier on it....

Nice subject on this thread. It brings back a lot of good memories.

Keep the stories coming.

Here in the UK your best bet for playing on machines was the
independent computer shops. One of my particular memories of shopping
in a major chain - Boots the chemists, whose larger stores used to
have an electronics section - is of setting off the "trembler" alarm
attached to a C64 and its Music Expansion System. Very high-pitched.

I nearly missed the bus home once because I was too busy playing Mr Do
on the Atari 800XL in that store, too...

I have vague memories of watching someone play Hitchhiker's Guide to the Galaxy on some kind of Apple back when... In Finland. But I don't think Apples sold that well here, with the usual "Europe pays double" pricing they must've been really expensive...

Some people have bought the silver paint pens and used them to repair
the traces. Stuff I used was from a guy on eBay. It is just ~finger nail
polish bottle and brush. Kind of pricey but the guy gives good service
and the stuff works.

Well, they were already double or triple the cost of a comparible
Commodore 8-bit setup, so if they were sold for double in Europe, then
I can't imagine how much they would have cost.

The self-help program was originally written for the 1200XL, and when Atari redesigned it as the 600XL/800XL computers, the program was never fixed... although they made damn sure to remove the Easter egg that was originally in it :/

Heh. Excuse me for not stalking you. ;)

FWIW, I'll be down in the Bay Area for the Google Summer of Code
'Mentor Summit' in late October. Maybe we can grab coffee or something.

Or... maybe I should just plan a separate trip. (I'm a bit of an over-planner,
and end up trying to do way too many things at the same time, rather than just
make a couple of separate, focused trips. :))

You're talking about the ribbon socket on the
motherboard, I think. Best electronics probably
has them. It would require some really delicate
de-soldering and soldering, the 130XE motheboard
is very delicate.
Google Best electronics, Good luck.

I've restored a bunch of classic arcade machines (Dig Dug was HELL).
So I'm pretty skilled in soldering/de-soldering... I managed to find a
connector from B & C electronics (myatari.com) so problem should
(hopefully) be solved.

Good Job!, let us know.

Yeah, I've gotten stuff from them also.

I was just saying the other day how well the Atari8
systems are supported compared to other ones. It is
very surprising what you can still get for the older
platforms.

> In this area, Montgomery Ward used to have good computer displays set up.
> They are gone too. :-(

The Montgomery Ward store in Hulen Mall in Fort Worth was the only place I ever saw a Bally Astrocade home video game system set up and turned on.

You may remember that Sears used to be the 800-pound gorilla in the shopping world, and if you wanted to sell anything at Sears, it had to have their name on it. That's why Atari manufactured the "Sears Tele-Games System" or whatever they called it, which was just an Atari VCS with a different label slapped on it. Nobody was really fooled, and I think I may have seen one such system set up for play in one of their stores at what was then called Seminary South mall in Fort Worth. But our family never had any pleasant memories of dealing with Sears, and for us Sears was just something we walked through in order to get to the rest of the mall. (Come to think of it, I can say the same thing about the Montgomery Ward store at Hulen Mall.)

When I grew older I went to work in a Sears service center, repairing various electronic items. Much of the stuff that came in for repair arrived from various Sears stores, and they were either customer items or devices that still belonged to the stores but hadn't been sold yet (or were showroom demos). VCRs were still pricey enough to warrant repair back then. We never fixed any video games, but I do recall seeing some very strange, early attempts at custom word-processors that we had to fix. I have no information on any of these, unfortunately. But I feel sorry for the poor dopes who bought them. Not compatible with anything else on planet Earth, and totally useless now. Some even used their own custom forms of floppy diskettes. These were self-contained computers, with their own internal video monitors.

I think it was a BEST store by Ridgmar Mall on Fort Worth's west side where I bought my first electronic typewriter in the mid-1980s. I'd saved up some money (I was still in high school and not rolling in cash) and bought an Olivetti Praxis 20. It used a daisy wheel with film ribbons to allow you to back up and correct mistakes, but it was no computer by today's standards; no video display or anything. But I didn't do my homework before I plunked down the cash; I did not realize until I got it home that those ribbons were not re-usable. One ribbon was good for about 20 pages, and that was it. If that wasn't bad enough, I also discovered that replacement ribbons were available ONLY from that BEST store! Nobody else in town carried them. And

BEST only had a few extras on hand at any given time. I eventually was able to buy a cloth-ribbon cartridge, which was re-usable, but the experience turned me off on BEST and Olivetti products forever. When the typewriter eventually broke I took it completely apart and salvaged it for parts. Taught me a bitter lesson. The store closed long ago and I don't miss it one bit.

Today I live in Arlington, TX, but my parents still live near Hulen Mall. But I haven't been inside the mall for ages. My sister used to work at the Hulen 6 movie theater, which has since been closed and boarded up. The mall has been expanded at least once since I was a youngster, too. I seriously doubt that Video Concepts is still there, given the horrendous turnover of stores in malls. Hulen Mall opened in 1977. I don't think there's a single original tenant left in there. Stores come and go. There used to be a video game store on the second floor where I sometimes bought Atari 2600 cartridges, but at the time I couldn't afford the $50 they wanted for the "Le Stick" Atari 2600 joystick that used mercury switches and allowed you to play games in midair. I have no idea what video game stores are in Hulen Mall now.

When the Atari 5200 system came out, the only place I could find that carried it was Toys R Us at I-30 and Cherry Lane, on the west side near Ridgmar Mall. Is that Toys R Us still there?

There used to be a good computer store on Camp Bowie Blvd. where I actually plunked down the money to buy a software package for my Tandy 1000 computer (an IBM PC clone). Can't remember the name of the store but I bought a copy of a word processor called "Professional Write 2.0." Can't remember how much it was, but it had to have been good for me to go out and buy it. Still have it on the shelf, too, with the 5.25" and 3.5" floppies inside. :) Haven't used it in many moons, however. Too sentimental to get rid of it. I started out on WordPerfect but my pirated copy started acting strange. I got my money's worth out of "Professional Write," however.

I remember Professional Write. A copy came packaged with an XT Clone that I
bought. One thing I liked about it was that it could take full advantage of
the proportional fonts in my Epson printer. Or on the other end of the
spectrum, it could print to file and create a nicely formatted pure ASCII
file which could be easily converted to a nice looking CBM text file. I'll
hazard a guess that such files would be easy to convert to an Atari format
also.

They were sold in Europe (at least in the Netherlands), but one had to
look real hard to find a shop that sold Apple computers. Apple wasn't
nearly as popular as Commodore, MSX, Atari and even Sinclair in this area.

Thanks for the link.

Foggy memory but there may have been one other 'in house' 1200XL OS ROM.
I seem to recall booting a 1200XL about 10 or 15 years ago and it had
maybe six programers and engineers names displayed. I figured it was a
special edition version for the development team. Unfortunately I put
the ROMs some where for safe keeping when I put in an OMNIMON OS and the
chips got lost.

I bought Professional Write because it was very easy to learn and use. You probably heard scary stories about how WordStar was to learn; never even touched that. Professional Write was primitive by today's standards (didn't even use a mouse, I don't think, and had no real graphics capability), but it worked quite well. I really loved the cut & paste feature, and programmed some of my own macros to speed up a few cumbersome processes. There was one tiny bug in the program that irked me a little... if you were writing fiction with characters who spoke a lot, using the Tab key so often would cause the program to think you wanted to change the left margin (I may be wrong about the precise details on this... it's been so long ago).

I forget the name of the company that produced Professional Write. They've probably been bought up, sold, merged, split up, bought up again, stock split, folded, spindled, and mutilated several times by now.

I never owned an Atari home computer simply because they were so expensive at the time. And I wasn't that good at typing out demo BASIC programs on them on store displays. Each type of home computer had its own verion of BASIC, and of course not every single command was necessarily transferable. I do remember seeing some TV commercials for the 400/800 computers, such as a father teaching his son how to speak French with an Atari home computer.

They were reasonably popular with businesses before the IBM PC came out. Mostly I saw PET's and Apple II's being used in businesses with that Stoneware database and Visicalc.

I know one guy who had an Apple at home, full kit with twin floppies, Z80 card, colour monitor etc and we used to argue weekly at the computer club on Atari v Apple.

Apple II was about £1000 for the basic machine I believe. An Atari 800 was about
£600, 400 was £300. An 810 was £350. My annual salary at the time was £2000 to put
that into perspective.

I got my brother's Timex Sinclair 1000 when he got a C=64, and played on
both a little. At Sears(?) one day, I tried to program a little program
in BASIC on an Atari 800XL or 600XL, and because I didn't know about the
string restriction (you need to DIMension them first), the program didn't
run, so I thought "fooey!"

Then for Christmas (or was it birthday?) I got a 1200XL. Most awesomest
machine ever. Except that the Rev. B BASIC cart. I had ate my most-excellent
Pac-Man clone. :^(

An 800XL I picked up years later is currently hooked up in the drawer of our
TV stand, with an SIO2SD connected to it, and a bunch of random game and
demo disk images loaded onto the SD card. Sweet and self-contained. ;)

(And above that are the Jaguar, Dreamcast, Atari 7800 and Sony PS2)

I discovered this:

http://members.home.nl/stack/Atari/atari-xlxe-download.html

which includes a tool for listing what files are stored on ATR and XFD
disk images. Is there such a thing for Linux?

In the meantime, I suppose I'll try to run one of these tools under DosEmu :)

Not that I'm aware of, but it's easy to do once you know the underlying filing system at the Atari side.

I personally do not use ATR images a lot, I'd rather go for the host emulation drive directly, which is considerably more practical for my purposes.

So long,

Hi,

I was just on Atarimania.com and noticed that they have almost a dozen
different Assemblers for the Atari 400/800. Which of the offerings
listed on the site is the one Atari sold in cartridge form? Which
Assembler is recommended? Any help is greatly appreciated!

I've been using ATRs since the mid 1990s, and my SIO2SD uses them, so it'd
be nice to figure out where files are a bit more quickly than swapping
virtual disks on the Atari, and skimming disk directory listings in MyDOS ;)

Atari sold this one in cartridge form:
http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=19777

The assembler I here often recommended is MAC/65 by OSS:
http://www.atarimania.com/detail_soft.php?MENU=8&TYPE_CODE=U&SOFT_ID=10965

But I think more people prefer to use MADS on a PC and then run/test
the code on an emulator:
http://mads.atari8.info/

Enjoy!
Eric

Yes. If you have installed a recent AtariSIO development snapshot
on your PC, you should have an (undocumented) programm called "adir".

By default it outputs the directory of given ATR/XFD/DCM file(s),
similar to the DOS 2.x "A" command. You can add options like
"-<columns>", to set the number of entries per line (default is "-4").
"-r" means "raw output", that is you also get the file number, the
file status code and the starting sector. With "-t" you get a
tree-output of MyDOS subdirectories.

so long,

Hias

I'll echo what Eric said but everyone had their preference. I started off with the Atari ASM/ED cart and for some reason stuck with it for the most part even after buying MAC/65. I did a lot of mixed language programming and the Atari cart let you use page six where MAC/65 would step on your code. Much easier to develop routines for on page six then test them with Action! or BASIC using the Atari cart with my particular set up. All the complaints about it were valid; slow compile, defaults to putting your code in memory, and weak debugger. Towards the end of my programming days I migrated to TASM on the IBM which meant 80 column editor and lightning fast compiles. SIO2PC eliminated a few of the problems porting the code to a real Atari for testing.

You will end up choosing what you like best as a development envirionment rather then any particular assembler. I know of at least one 'famous' Atari programmer that used the disk based Atari Macro Assember even with other tools were available.

Rick

Hey, cool, thanks. I grabbed the latest snapshot source, went into 'tools'
and did "make adir". Sadly, though, it didn't fully compile:

CasImage.cpp: In member function "CasImage::EBlockType
CasImage::ReadBlockFromFile(RCPtr<FileIO>, unsigned int&, unsigned int&, bool)":
CasImage.cpp:109: error: "AWARN" was not declared in this scope
CasImage.cpp: In member function "bool CasImage::ReadImageFromFile(const char*)":
CasImage.cpp:128: error: "AERROR" was not declared in this scope
CasImage.cpp:147: error: "AERROR" was not declared in this scope
CasImage.cpp:158: error: "AERROR" was not declared in this scope
CasImage.cpp:191: error: "AERROR" was not declared in this scope
make: *** [CasImage.o] Error 1

My g++ is:

g++ (GCC) 4.2.3 (Ubuntu 4.2.3-2ubuntu7)

<snip>

It looks like a few of the .cpp files need to #include "SIOTrace.h".
Compiled file. Seems to work... except one interesting thing. I did
an "./adir MYDOS453.ATR" and it lists no files. The disk image contains
two files, DOS.SYS and DUP.SYS. Does 'adir' skip those, or consider them
special somehow?

You should start "make" from the atarisio root directory, not the "tools"
subdir. The Makefile in the root directory defines several variables
that are needed by the Makefiles in the subdirs.

Usually a "make && make install" should work fine. "adir" will then
be installed to /usr/local/bin along with the other tools (atariserver
etc.).

If it does not work, please drop me a line and I'll have a closer look at it.

Hi Bill!

On 01 Oct 2008 23:52:24 GMT, Bill Kendrick wrote:
> It looks like a few of the .cpp files need to #include "SIOTrace.h".

Yes and no :-)

Actually, compiling AtariSIO without "-DATARISIO_DEBUG" is broken at the
moment. This compiler flag is set in the top level Makefile and
"inherited" by the sub-makefile in tools.

So, it's best you start over again with a freshly unpacked AtariSIO
snapshot and just type "make" at the top level directory. The output
should then look like this:

```
...
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o atariserver.o
atariserver.cpp
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o CursesFrontend.o
CursesFrontend.cpp
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o StringInput.o
StringInput.cpp
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o History.o History.cpp
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o Directory.o Directory.cpp
...
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o CasBlock.o CasBlock.cpp
g++ -g -W -Wall -DATARISIO_DEBUG -DUSE_ZLIB -DENABLE_ATP -c -o CasImage.o CasImage.cpp
...
```

> Compiled file. Seems to work... except one interesting thing. I did
> an "./adir MYDOS453.ATR" and it lists no files. The disk image contains
> two files, DOS.SYS and DUP.SYS. Does 'adir' skip those, or consider them
> special somehow?

'adir' doesn't skip them, I guess something went wrong when you compiled
it. I did a quick test (with the snapshot from 2008-07-14) and the
mydos453.ATR from
http://www.ftp.pigwa.net/stuff/collections/atari_forever/Dos/Mydos/

```
$ ./adir /tmp/mydos453.ATR

directory of image '/tmp/mydos453.ATR'

DOS SYS 0035 DUP SYS 0054
619 free sectors
```

BTW: I'm running Debian Lenny (amd64) with gcc version 4.3.1
(Debian 4.3.1-9).

so long,

Hias

Crud. I'm using an older kernel image (so sound still works on my Dell),
and I'm not seeing a kernel headers package that matches that version.

Not that it matters... this laptop lacks a serial port, and I won't be using
AtariSIO's server on it. I just want the 'adir' tool...

I'll figure it out. THx,

If you just want the tools, comment out the "$(MAKE) -C driver" lines in
the toplevel Makefile (below the "all" and "install" targets).

BTW: I installed Ubuntu 8.10 inside a VirtualBox and except for a few
format string warnings it compiled fine. But compiling ATasm was
quite troublesome, it printed in a lot of warnings and the resulting
executable liked to crash a lot. Disabling gcc optimizations (commenting
out the CFLAGS line in the Makefile and un-commenting the CFLAGS line
just above - or below? - , the one with "-g", worked fine).

so long,

Tried that, and I still get errors due to ALOG and AWARN (in MiscUtils.cpp). ;)

Leaving the debug CFLAGS/CXXFLAGS lines enabled, and it seemed to build.

But, heh, I still get an emtpy directory on the MYDOS453.ATR I have sitting
here.

Very, very strange. Which AtariSIO snapshot did you download? Was it
the latest one (080714)? Did you change anything in the Makefile except
the $(MAKE) -C driver?

And, which Ubuntu version are you using?

I tried 8.04 and 8.10. On 8.10 I used the default gcc, version 4.3.2-1ubuntu8.

> But, heh, I still get an emtpy directory on the MYDOS453.ATR I have sitting
> here.

If you like I can email you a precompiled executable (just need to know
your exact ubuntu version), so we can check if it's a compile problem.
But, actually, I'd like to know what's going wrong so I can fix it :-)

so long,

Hias

Hi Hias!

This is off topic but I just wanted to take this opportunity to thank
you for all your tools.

AtariSIO (both linux and boot disk versions), WriteATR, MyIDETool,
adir, dir2atr, I use them all!

Thanks!

- Steve Sheppard

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

2008.08.02 Fandal: Who Lost the Wallet?
2008.08.02 added: Ingo (SIO2IDE 3.3 vendor)
2008.08.02 Wolfram Fischer: added ASCB; removed SIO2IDE
2008.08.02 added: Jorge Cwik
2008.07.27 added: Wordmark Systems
2008.07.26 MadTeam: Graph2Font 3.8.6.1
2008.07.22 updated: Atlantis Games Group

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be
listed here. "Active" PD/freeware/shareware developers should also be listed.
Persons or entities holding rights to products, but not selling or supporting
them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products
sold are given in categories: new hardware, used hardware, PD/freeware/
shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the
developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete
subscription or ordering information should be given, including prices.
Authorized online publishers of originally print or disk magazines are also
listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be
sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication
title. If no company name exists, a personal name is used. "See"
references indicate complete information may be found under the given
heading. "See also" references indicate closely-related information may
be found under the given heading.

The month/year that vendor information was most recently fully verified is
given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email
address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

The GP2X Wiz and Pandora units will open up the face of handheld
computing

The GP2X Wiz is a pure Gaming/Video/MP3 console with hundreds of
emulators written for it

The other, the Pandora is a UMPC, which can run openoffice/firefox and
is the same shape and size as a nintendo DS

To find more information view here
http://gp2xwizandpandora.blogspot.com/

or to order

Check the data here on GP2X Wiz:
http://gp2x.co.uk/go.pl?A216

Check the data here on Pandora:
http://openpandora.org/worldmap.html

Mention you were sent by Raj Takhar and you may get an extra discount

Fun indeed. My favorite gag was to find an MS-DOS machine and run the
following commands from Debug at the DOS prompt...

```
C:\>debug
-a
137B:0100 mov ax,13
137B:0103 int 10
137B:0105 mov ax,a000
137B:0108 mov es,ax
137B:010A mov dx,3
137B:010D mov cl,dl
137B:010F mov di,0
137B:0112 add dx,9248
137B:0116 ror dx,cl
137B:0118 mov ax,dx
137B:011A stosw
137B:011B cmp di,fa00
137B:011F jne 112
13CE:0121 jmp 10f
13CE:0123
-g
```

Nothing harmful, but made it look like something was _seriously_ wrong with the monitor.

> and CA65 (from the CC65 suite): http://www.cc65.org/

ca65 is my recommendation. It has macro capabilities beyond that of
Mac/65 and is easy to use and setup - a pleasure to work with.

Of course, it doesn't come with an IDE - but "I don't need no stikin'
IDE". Instead, it has a very good toolchain.

So long,
Thomas

Last-modified: July 20, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I'd love something that does just the opposite. I've never used a
joystick or other controller that I like as much as the original Atari
joysticks. :)

For USB-based systems (PC, Mac, etc.), you can get a Stelladapter.
I've got one, and it works great under Linux. :)

Try this site:
http://www.legacyengineer.com/store.html
Good for most of your emulator joystick needs
Atari CX40 with USB
:-) Just bought one.
pc,mac,Linux compatible.

Those both look pretty cool. I requested a spot on the waiting list for
a Stelladaptor. It's more expensive but also supports paddles.

(Now if someone would just make a bluetooth or IR adapter to use the
joysticks with Atari Retro on my Palm...)

I've got an Indus GT disk drive with power supply for auction. It
tested good on my Atari 800.

eBay #230300090326

Thanks!!
Jeff

On second thought, after comparing prices again, the legacyengineer
version is looking pretty good. It sounds like it can be used with
regular PC games as well.

2516. Atari800Win 4.0

Newsgroup: comp.sys.atari.8bit
Date: 2008-10-23 02:26:33 UTC
From: personable85 <personable85@hotmail.com>

Source record: 2905

I need help with the Atari 800 emulator Atari800Win 4.0. I can't get the 5200 ROM to work properly. Every time I switch to 5200 mode, the colorful 5200 opening screen appears and everything appears to be fine. Then, about 20 seconds later, the Atari800Win program tells me the program has crashed and offers me a number of solutions to the problem. I've tried the suggestions like turning off BASIC, but have had no success. Any help would be greatly appreciated!
Thanks,
Mark

\
After the crash dialogue comes up click [NO]. then Press ALT+C on keyboard
and then file selection comes up. Browse to your folder holding the 5200
bin files. Select your binfile.bin and click [OK]. Press start and game
begins..

Good Luck
RoyE
ps basic off helps and no atr's mounted on drives.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I'm trying to play Star Trek using the AtariWin800 emulator in 5200 mode. I got the 5200 emulation to work and the Star Trek cartridge to play, but I can't get past the opening Star Trek title screen. I tried programming the keyboard to emulate the joystick, but that did not work. What do I need to do to get past the Star Trek title screen and play this game?

Thanks!

Mark

Hey, I've really enjoyed reading the posts here over the years, but Comcast is doing away with their newsgroup service in a few more days so I will no longer be able to see any of the newsgroups.

Does anyone know of a place you can access these newsgroups for free?

Please answer here, but also email me at sacnewsnet@yahoo.com just in case they turn the thing off before I can read any more messages.

I would recommend the service I use these days, Octanews.

http://www.octanews.com/

Not free, but the block accounts are practically free if you're only going
to be reading a few text-based newsgroups, which is what I do.

Hi guys,
I tried posting this once before, but something happened to my
connection. Forgive me if this is a repeat.

I am looking for a game that I played once. It was a dungeon game, as
I remember having armor on many parts of my body, including the neck.
The armor was signified by a number when I did a review of my armor.

Each step was one turn and at each step I had the chance of meeting up
with some kind of monster. I remember typing the command, "Hit Neck"
in this game when attack a monster (or some other body part). The
game then made a bit of a 'tweep' sound effect and moved my sword a
little to signify that I had attempted to attack it.

The walls were grey like blocks and the door was a bit of a slanted
line. It had levels in which I could go deeper and deeper, usually by
going to the other door on the other side of the screen.

It was not written in basic and is not called 'Temple of Apashi' nor
did it look like that game.

Can anyone help me out here? I think the name had the word 'Dungeon'
in it, like Dungeon Master or something, but I am not really so sure
of it.

I have the same problem with Atari800MacX. The title screen appears
and plays a short Star Trek theme song and then nothing.

I Believe, just like on the ST, the 354 is single sided format and the 314 is
double sided format. -=-Ben-=-

Hello Jack, I believe this is a Bob Puff mod. You take an xf551 and remove the 5.25 mech and replace it with a 3.5 mech. If you add a Single Sided Double Density 360K mech, you have an xf354! If you add a Double Double Density 720K mech, you have an xf314! Both mechs are Double Density, not High Density! These mechs are common on the Atari ST in both the SF354 and SF314 drives. -=-Ben-=-

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

So then that would make the xf354 a made up model # and not an actual
drive Atari sold. I seem to recall and someone might be able to
clarify my foggy memory that a 3 1/2" 8bit drive was planned and
perhaps prototyped at some point but never released. I do remember
that even the xf551 would not have seen the light of day if Atari
weren't sued over XE Game System (in the suit they claimed there was
no current prodiuction computer hardware (floppy drives for example)
for the XE gaming system so in fact they were false advertising it's
capabilities to run "1000's of software programs" and Atari countered
by quickly releasing the XF554. Okay while my memory is being jogged
wasn't there a third party 3 1/2 " drive you could buy the Atari?
Anyone else remembering any of this?

It seem's so long ago now. Like it all happened on another primitive
(but more fun) planet.

I dont know if the xf354 is a made up model #, still Atari did not sell it. It's a converted xf551. You take an xf551 and add a 3.5" inch drive so have the same 5.25" 360K mech inside and an added 3.5" mech outside, on top. Or remove the 5.25" 360K inside mech and upgrade with a 3.5" mech inside, like a 720K Double Sided, Double Density mech. If you know somebody with a good xf551 with a bad mech, you can save it this way!

Yes! Atari did plan a 3.5" 8 bit. Lance at Video 61 told me.

The 3.5" mechanisms used on Atari ST drives were made by other manufacturers and also used on other computers besides Atari. If you could find old mechs out there and upgrade your xf551, wouldnt it be grand!

You might find help with this from Bob Puff or Lance at Video 61.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

So I finally decided to play Electrician through to the end and found
out that the copy circulating on the net crashes when you finally get
the key to building 4 - you enter building 4 and the emulator crashes.

Does it do this on a real atari too as the cracked file is defective?
Anyone ever finish the game?

thanks, scott

2553. lil project concept: mcu to atari?

Newsgroup: comp.sys.atari.8bit
Date: 2008-11-15 23:23:13 UTC
From: bill mcb <billmcbrineNOSPAM@yahooDOT.com>
Message-ID: <BRITk.966$o15.906@edtnps83>
Source record: 2942

Hi folks

I'm an olde atarian and always enjoy a bit of dreaming...
I know it's probably a bit pointless now, but here's an
idea I had recently.

Hardware upgrade project for Atari 8's
==========
- Microcontroller, like an AVR, or ARM Thumb. They are awful
cheap now a days, some under $5 and fully reprogrammable.
- Build the controller into a cartridge for the Atari8,
write code into it so it's tailored towards common logic functions,
bit manipulations, math, rendering, etc.. anything.
- Rewrite an expanded Atari BASIC language to fully and
maximally utilize this controller co-processor and all
its own functions. Add keywords for whatever you wish.

You can actually accelerate many standard BASIC functions by
having the controller do it instead. Use the Atari to grok
the keywords, then calls the co-pro to do the real processing.

These lil chips run real fast now a days, some over 50 Mhz and
some 150Mhz+ for around $20 for the chip itself and are 32bit!
Wouldn't it be sweet to use a plugin cartridge as your accelerator??
The same idea could apply to any 8bit or even 16bit computer.
It could be as cheap as ~$20 to build one of these cartridges
with a cheaper chip.

Nice dreams.... but who uses physical Atari's anymore. Well, I'm
sure there are some in this group that do. I still have my 800XL
but I don't really use it. :-)

=-Bill-=

<snip>

IMO: It would be a neat hack but there aren't that many people that would benefit. It is more of a problem with the Atari being the bottleneck. Flat out an Atari takes ~1/3 of a second to transfer the 8k of a high res screen to display memory. Even if you had a coprocessor that could generate real time 3d video, you would still be limited to 3 frames a second for screen updates.

There just aren't a lot of applications that would benefit because a lot of work is being done on Windows platforms now. That is, if you need something like fast compilation you can either run a cross compiler on an Windows platform or just run an emulator with an Atari language at full speed. I hope you see what I mean. It isn't a slam against you or the AVR, it is just that even if you sped up say a native assembler on an Atari 10 fold, it would still be 100x slower then one on an Intel based machine which a lot of people have migrated to.

I would say video is important and several people have done AVR to VGA displays, but I think a lot of people have just bought one of those converter boxes. I know when I decided to set up an 8bit last month I just bought a composite to USB convertor so I could use my laptop's display for my Atari.

"I have met the enemy and he is us" kind of thing applies. I can't remember when Nick Kennedy came out with SIO2PC but I would guess it was around 1988. We've had about 20 years of virtually unlimited fast storage and what have we done with it? No new games that need 16 megs of storage to run, no new database or spreadsheet, and no new apps that take advantage of it. Mostly people use the storage to archive everything ever written for the Atari.

Rick

2555. Bravo Sierra or EBay?

Newsgroup: comp.sys.atari.8bit
Date: 2008-11-20 13:26:07 UTC
From: RetroC64 <stedetro@yahoo.com>
Message-ID: <49256569$0$14302$607ed4bc@cv.net>
Source record: 2944

In your opinion, if you are just starting to collect Atari equpiment, where would be the best place to start? A dealer like Bravo Sierra or EBay?

It seems EBay obviously has some great stuff but shipping is insane and the quality is anyone's guess. Bravo Sierra might be similar in quality and you would save on shipping but their prices seem very high.

Are there other sources besides these two?

Thanks.

I'd use both - because you may or may not find all you need from a single
source. Also, there are other Atari places, like Best Electronics, and
many more. Google for it.

Just my two cents. It depends on how anal you are about the condition
of your collection. To me it is worth a little extra money to get
something that is not all scratched. I like my stuff to look semi-
new. That said, while you are guaranteed getting something in good
condition from a dealer you pay threw the nose for it. If you keep
looking on eBay you can find things in good shape too. Make sure you
read their feedback ask questions.

My recommendation like another said, is do both. Another good place
to look is Craiglist,
'

I'm not sure if high speed drivers ever existed for Indus drives with
other DOSes.

I'm a little confused. You do know SpartaDOS is a
dble. dens. DOS? I'm unaware of a high speed
aspect to SpDOS, there may be one. SpartaDOSX
cart has some high speed drivers.
I never liked high speed. The Sparta ultraspeed
sector skew even I don't like, on 1050 with
US Doubler.
Just keep it slow and reliable, without errors.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Maybe he meant "a driver for MyDOS 4.53 or for any double density DOS".
MyDOS is a double density DOS.

Is this still accurate, after they just created a new company to merge
with and forced the stock buyback?

Yes.

And DOS XL was the DOS that shipped with the Indus GT.

The Wikipedia DOS XL page is pretty decent.

> with and forced the stock buyback?

Yes. Atari Interactive has been a wholly owned subsidiary of Infogrames
Entertainment since January 29, 2001, when Infogrames Entertainment
purchased Atari Interactive from Hasbro. (Hasbro had created Atari
Interactive, Inc. when Hasbro purchased the assets of the Atari division
of JTS Corp. on February 23, 1998.)

Probably the key is to realize that Atari Interactive and the modern Atari
Inc. are different entities (both owned by Infogrames Entertainment).

Atari Interactive, Inc. is the business unit that owns whatever
intellectual property rights still exist (in the home consumer market)
from the original Atari and from Tramiel's Atari Corp. And also from the
3 years when it was owned by Hasbro.

The modern Atari Inc. is the company that was founded in 1993 as GT
Interactive. Infogrames Entertainment purchased GT Interactive in 1999,
renaming it Infogrames, Inc. Then on May 7, 2003, the Infogrames Inc.
subsidiary adopted the new name, Atari Inc. Use of the Atari name and
trademark are technically licensed to Atari, Inc. from the separate
Infogrames Entertainment subsidiary, Atari Interactive.

What has happened here in 2008 is that Atari, Inc. (formerly Infogrames
Inc., formerly GT Interactive) has gone from being a publicly traded U.S.
corporation, with parent Infogrames Entertainment owning a controlling
share of the company, to Atari, Inc. now being a privately held subsidiary
that is wholly owned by the parent company, Infogrames Entertainment.

Yes that would be a problem for the *atari video system*.

Yes I have been very impressed with the possibility of 'bitbanging'
a video signal now-a-days! Wow! But I guess not even you would be
interested in an project such as this... Even if it only cost $50 ?

> "I have met the enemy and he is us" kind of thing applies. I can't

>
> Rick

Strongest point of your reply Rick, and I agree. There just are no
decent development tools on an Atari - There never was. Anything you
wanted to do for programming you had to do it largely for yourself.
The PC-land has all the tools anyone would need today. Actually, I
would say *almost* all the tools anyone would need.

Why not come up with a concept for an upgraded Atari, and implement
it inside an emulator? And the smart thing is, any upgrades don't
even have to map into the Atari! - They can, for lack of a better
term, be 'magicly seen' through the extra capability of the emulator
software. You don't have to use Atari memory locations for anything!
It could also be accomplished whereby the emulator software
recognizes specific commands/sequences, and performs its intended
function. It is Ghost Hardware. Which can easily include Ghost
Ram too!

Possibilities:
- Full 256 color PM graphics (larger sizes possible)
- Full 256+ color background displays processed from the PC side
- Access to PC's FPU for high speed math
- Utilize PC's RAM for extra buffers/ram
- Access to the PC's super-fast processing abilities
- Virtual FS that lets the Atari see and use any PC storage
- Allows you to utilize the development software from the PC side

This would blur the boundary between Atari and PC. The Atari can
become the dream computer we never thought of back in the day.

WHY do we like our little Atari8's??? Because they are small,
familiar, and easy to use for simple things, and they had a style
of operating. "Atari Culture" You had a special way of looking
at computing, a creative way. Remember how we thought of "PC"s
back in the day?? Dull, business-like, colorless, stuffy,
and big. But now the Atari is part of the PC world. And the PC

world is nothing like it used to be - It's amazingly creative!
That creative power be imported back into the Atari emulators.

I'm just hoping someone sees this, and likes the idea...
Although - it probably is simply too late for this project.

I would, but I am one in a million. I like the AVR and wouldn't mind having
one to play with. I haven't because I'm just plain getting to old and have
to many other projects.

I have done about half a dozen hacks on the Atari. Only thing I know people
have actually made is 1489 version of SIO2PC. No other home control systems,
no 2nd PIA chips, no modified OS, et cetera.

It's up to you, it is all good. I mean I still like my hardware decoding of
the memory map to double the count of memory mapped chips you can have. I'm
also probably the only guy who has that mod. Ditto for the 65C02 in one of
my computers. The question is how many people do you want to impact?

I'm not sure but I think some things like 65816 have been implemented in
emulators. AFAIK no one has written a program that only works on an emulator
let alone only works on an emulator in 65816 mode.

There was always a couple of Atari users that would pop up and say ~I would
write the greatest game ever if only Atari BASIC ran faster for instance.
Well now with the emulators they could. I mean you could probably do a
version of Doom in Atari BASIC, albeit with lousy graphics, running real
time on an emulator. I imagine in another 10 years it may be hard to even
find someone who knows how to program on the Atari.

Cart/horse thing. About the only people that are still programming on the
Atari platform are in Europe and they get off on demos. You can make the
latest-greatest hack that ever was, but unless you have some killer ap or
must have game up your sleeve, no one will know it but you and maybe a few
others. It's a tall order.

I think I have a reasonable idea of what people in the Atari world are like. It is mostly about stuff that let's them indulge their habits of hording and nostalgia. Mix in a liberal dose of cheap and dumpster diving mentality you have us.

Its the kind of thing where if you put together and AVR that will read a $30 4 gig SD card and interface to an Atari via the cart port or SIO chain, people may buy it. I mean you could give it all the capabilities in the world and it would be nice, but no one would use them. Hording and replaying old games...

People are spending ~$70 for composite to VGA converters. Just can't throw away that old monitor from the 386SX!

Heck, do it for sake of doing what you want. Right now I am thinking of hacking an Atari to modem to cell phone connection. I think there is at least one wireless provider that has unlimited night time minutes for $30/month. I figure I can use it to call whatever bbs's are still in use in the USA w/o going bankrupt from a phone bill [nostalgia, cheap]. I could even use it with my laptop for dial up where wifi isn't available like on my boat.

Rick

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

Yes I know, and that is frustrating. I talk like this with my cousin
sometimes too. He and I grew up around the Atari era, and we always
enjoy intellectually returning to those more fun times.

Technology has advanced just too darn far too darn fast... I feel
the obsession that I sometimes have with my old systems is a way
of relating to something I'm more able to chew on. Ya know?
Back in the 80's I learnt 6502 asm, but really did NOT like it.
I wonder how the Atari8 would have fared if it had used a
Z80(4mhz+) chip instead?

Oh well, it's all so much Useless Theory....

Yes. I guess the demo guys like it for the challenge too. Like
writing a new game on the 2600. I just tend to think it could be

a little Fun.

> Heck, do it for sake of doing what you want. Right now I am thinking of

I'll have to do it purely for my own interests/reasons... If I do anything
then I'll post about it here... My idea was to make it exceptionally
cheap to make yet exceptionally useful (for an atari). I guess it will
be flushed as a 'cute theory' along with so many other concepts.

I only asked here to see if anyone happened to think it would be
fun... Must be a bad time to ask eh, with the world falling apart
and all...

It would be pretty trivial I guess but that is about my speed right
now.<grin>

I think all I would have to do is get one of those cell phone head sets, cut the mic and earphone off, and match the impedance to a modem output. There's a couple of other things I recall being problems, like some modems hang up automatically if they don't detect a holding voltage of ~9V DC, won't dial w/o a ring tone, that kind of stuff.

It's just one of those subjective things. The cell phones I have insist on using their setup, paying a premium for access, paying a premium for data transferred.

There are still a few BBS's out there and while most people seem to have an Atari<=>IBM connection of some kind, I would like to try it the old school way. Bypass the net, no clone involved, Xmodem!

Rick

A bit off the original subject thread, but it's done other ways too Rick.
I run my BBS on pure Atari hardware and software, no clone <gag> involved,
using a Lantronix UDS1100. So you use telnet, (no original modem,
unfortunately), but its all Atari, as it should be. :)

PS In case you're wondering, the connection path looks like this:
cable-modem --> DLink router --> UDS100 --> Atari Mega ST

2590. Driving Controller games?

Newsgroup: comp.sys.atari.8bit
Date: 2008-12-05 20:23:14 UTC
From: bill@newbreedsoftware.com
Message-ID: <49398db2$0$2764$742ec2ed@news.sonic.net>
Source record: 2779

I found Indy 500 for the Atari 2600 for 98c at a local music store.
I bought it, then went out to find a pair of Driving Controllers
(having just sold the _one_ that I had... d'oh!)

Anyway, they've arrived (along with a 2nd copy of Indy 500 :)), and
I'm wondering... are there any Atari 8-bit computer games that can
take advantage of them?

I've seen, via YouTube, someone is working on a Tempest clone (more like
Tempest 2000, actually). I should encourage them to support these controllers,
if they don't.

And come to think of it, it's odd that racing games of the other style
don't support Paddles. (Or do any of them?)

I'm thinking Pole Position and Pit Stop... games which are not really
unlike Night Driver (which uses paddles).
(Indy 500 and its ilk -- Super Sprint, Off Road, etc.) require full
rotation that Driving Controllers provide.)

Comments?

Speaking of Tempest clones there was a game called Livewire from
Analog computing. I believe it supported the driving controllers, or
there was a special version of it that did. They aren't really like
the controllers on Tempest since you can't spin them, but the driving
controllers are pretty close and easy to come by. The T2k clone
(Tempest Extreme) looks awesome. Imagine if something like that came
out in 1982!!!!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I agree here also. I usually go Ebay, Best Electronics, B&C or Bravo Sierra.I
have bought from them all and they are great.

I have a driving controller for the 8-bits. Works ok wth the driving games,
but the controll is a little off. Nice piece of hardware though.

What games support them?

(You are talking about the Indy 500 'Driving Controller' that looks
just like a paddle, right? And not some "steering wheel that sends
joystick left/right signals"...?)

I've seen Livewire. It's not bad. I didn't know it could use Driving
controller (or I forgot, or I didn't see the hacked version. :))

Agreed, check the drive speed with DOS 2.6f for example. Have had a lot of drives not set for Europe and those tend to run slow. Also can damage your disks if you run at too slow speeds ... However, I do not recall what speed for US and what for Europe ... 271 for US? I think over 300 for Europe

Take Atarian care

yea it was one of my fav's back in the day. I actually typed that
sucker in from Analog!!!!! I would of loved Tempest Extreme. I
would like to get that driver controller working with a PC and Typhoon
2001 which is an awesome (and free) update to Tempest 2000.

I've been thinking of plugging a driving controller into my Linux box
via my Stelladapter and seeing whether I can make any sense of it.
At least as a proof of concept, if not an actual game.

I seem to remember using a joystick with Livewire, which for me is easier than a paddle would be for that game anyway. (It's too bad the same thing isn't true for Breakout, which I've been trying to play on my Palm without a paddle...)

Well, paddle would be useless on a Tempest game unless none of the levels looped around (no circle, square, etc... just lines, Us and Vs.)
Driving Controller would be totally appropriate (since it's the same kind of input device as on Tempest in the arcade.)

> (It's too bad the

Heh. Yeah. Ugh. Some Trakball games are kind of crappy with joysticks, too. (Centipede, Missile Command.) Often playable enough, but not the same experience as the arcade...

What other rotary-controller games are out there (in the arcade)?
Off the top of my head, all I can think about is Tron (for the tanks and the MCP battle). Maybe Gyruss...?

I recently obtained an Atari 800XL & 1050 superarchiver drive. I used to own both of these a long long time ago also but have obviously in 20 years of absence forgotten a lot of things :) though probably not much has changed at least :).

Anyway when I used to own it a long time ago I used to use menus called Alphaload to store my games on. I have been trying to track down these kinds of utilities but am not having much luck actually. Does anyone know where I can find these kinds of utilities? I have a 1050 with a super archiver in it so want to take advantage of the DD. I also have a sio2pc cable and want to transfer software in both directions which brings me to my second question. I downloaded some large ATR images, 1 meg each and to bring up the menu i have to load dosmenu.atr in the first drive and then attach the other game images to the second drive. I would like to transfer some of these games onto 5.25 disks to the alphaload menus, anyone know how? :)

I have looked at a lot of sites, a lot have links that aren't valid anymore or were last updated years ago..

Anyway if anyone can shed some light it would be much appreciated.

http://ape.dyndns.org:8085/A-J/

above has an alfaboot.atr, but it is 100k.

The www.atarimax.com has SIO2PC/APE software.

http://ftp.pigwa.net/stuff/mirror/homepages.paradise.net.nz/atari/

above has alpha-boot/load atrs.

You may have to register APE if you want to send
stuff from PC to Atari, it works the other way unregistered.

Gyruss used a joystick, but Star Trek the video game (color vector
graphics) used a rotary controller.

Hi,

Thanks, I checked out those sites, unfortunately the links to all the
software on this page seem to be broken

http://ftp.pigwa.net/stuff/mirror/homepages.paradise.net.nz/atari/

Anyway I will continue in my quest to find it!
So many sites host games but don't seem to be interested in utilities.
One might get the impression that the Atari 8-bits were just for games!

(Pigwa site doesn't work).

Yes, sorry about that, it looks good but the
links there are busted.
I tried to do a DOS ftp and it has a lot of stuff,
but it is very hard to navigate and stuff is busted.
The Holme's archive used to be at Langsite, but
that isn't up any more. And, as you say, Atarimania
is mostly games, I guess they don't have much
utilities.
I wouldn't be surprised if my efforts are out of
date.
I have access to stuff in my archives, but I hesitate
to get into sending stuff. I'm not familiar with the
'Alfaload' you speak of. I am familiar with menu
loaders for games. I used to use them. They bypass
DOS, so some games require a menu loader to
load properly.

If I remember, for DOS 2/2.5/MyDOS, the number
of bits set in 1802 gives the number of drives.
So, poke 1802,255 and it should give 8 drives.
You have to do the poke, then go to DOS and
write DOS files. Then whenever you boot that
disk, it will support that many drives.

My usual cleaning of edge connector contacts is to fold soft paper till
it just fits a little snug, then touch alcohol with a qtip along the
edge. Slide up/down to clean contacts.

Doesn't work on single pin or shrouded contacts very well.

Otherwise, Best and B&C probably have the connector in stock.

DRVBYT (=1802) is 8 bits wide, so IF you have a DOS that allocates
buffers from this location and supports drive numbers above D4, then
the high nybble would represent D5 thru D8.
00000001 (=1) is D1
00000010 (=2) is D2
00000100 (=4) is D3
up to
10000000 (=128) is D8
11111111 (=255) would be all D1 thru D8
Just add up the bit values to select the active drive numbers.

I know stock DOS 2.0 and 2.5 along with DOSXL use drvbyt but none
of my hardware will configure above D4. I believe that the MIO can assign
hard drive partitions to D5, 6, 7, & 8 probably using SpartaDos which is
not likely to use 1802.

Just trying to add a bit more info that Jack may not have yet. Once again a bit foggy on topics from 20 years ago.

You really don't want to have 8 drives on an Atari system unless you have something specific that needs 8 drives. One reason is the way Atari did DOS was it allocates something like a 128 byte buffer for each drive. This will compound your problems if you have handlers that aren't relocatable or large programs that use all available memory.

All Atari branded drives only answer to D1-D4. They only have 2 bits of slide switches to set drive number so that is the limit. I think a BBS, Compucat, was running on eight 810s with four modified ROM Atari 810s back in the 80's => half the drives would only respond to D5-D8. The sysop didn't like the set up and switched to an ST as soon as they became available. I'm not sure what DOS it was using or if it had been modified.

As Russ mentioned, SD natively handles drives 1-8 and D9: can be a ramdisk. SD uses a different scheme <dynamically allocates buffers?> so it doesn't use as much memory. Some people hate SD but don't always have sound reasons for doing so. SD does count on using RAM under OS so it creates its own set of problems if you try to use it with an 800/400 or modified OS.

FWIW: I ran an AMIS and later a BBCS BBS on a 256k 800XL with two double density drives, ~3/4 meg was a huge amount. With SIO2PC and APE supporting 16 meg drives, kind of hard to imagine what you would need 128 megs of space for. It's more of a bottle neck problem since the SIO only goes ~19kbaud so it would take forever to load, transfer, or access that much space. I mean 19Kbaud => 2,000 bytes. (128,000,000)/2,000 => 64,000 seconds or 17+ hours just to load the files in the first place. That's dedication!

Rick

Since I was looking at/for menu disks, I call them,
they don't need DOS, and can have several
binary load games on them, I found Multi-boot
images, that you could use, in dbl density.
I used to use one called MenuMaker, for
single or dble dens. The multi-boot disks
have a menu option to format another disk
built right into the menu.

>
> - Trevor

Only thing I can think of would be disk duplication. I think with write verify turned off, as soon as the drive acks the data block you can start the write to the next disk while the first one is busy writing the sector. I guess it would cut the time in half.

There were a few other odd hacks. I mean before<?> there was SIO2PC there was SIO2CP/M and projects like Atari Zucchini that let you use 'spare' Atari computers for simulated disk drives or printer spoolers. I don't remember if all of these allowed for access beyond simulated floppies. IIRC, Dave Small's<?> original Corvus hard drive interface was a little odd to in that it divided the hard drive into simulated 88k floppies. *BUT* the dedication to do something like hook eight Atari computers up to act as ramdisks and printer spoolers for your main Atari is just beyond comprehension!<grin>

IMO the alternatives, like just booting a copy of SD3,2f and/or using APE, are too attractive.

Rick

The MIO certainly can use each as a hard drive partition and or RamDisk.
Floppy Drives can be assigned and swapped around too.

2629. Happy 1050, ICD MIO Adapter for sale

Source record: 2718

Greetings,

I've a Happy 1050 disk drive in very good working condition for sale.
Includes: PowerSupply, Happy 1050 drive and Happy Software.

Also, a ICD Multi I/O adapter for the 65XE/130XE for sale.
The adapter allows you to connect the MIO to a XE Computer and
has 2 cartridge ports for cartridge based OS, games or etc.

Each sold to highest bidder.
US/CANADA only!!!

Shipping for the 1050 is $25.00 US/Canada

Shipping for the MIO Adapter $6.00 US/Canada

E-mail your bid for each or both to us at:
phantomm@suddenlink.net

2630. Idea: Orchestra Hero

Newsgroup: comp.sys.atari.8bit
Date: 2008-12-14 01:04:02 UTC

With Guitar Hero (and now Rock Band and the newest Guitar Hero, which are
both 'full band' games -- guitars, microphone, drums), I keep thinking of
ways to get in on that kind of fun with the Atari.

It occured to me that one might be able to create a fake violin that's
actually just a paddle. (Maybe give it an extra fire button?) Sure, it'd
be nothing like playing a real violin... but in the same way that the GH
controller for Guitar Hero is nothing like playing a real guitar.
(And the dance pad and moves you do in games like Dance Dance Revolution
are nothing like real dancing. :))

With two controller ports and a QWERTY keyboard, without doing
a lot of rewiring of controllers, you could do some kind of trio:

* Violin (Paddle)
* Piano (keyboard)
* Joystick (clarinet)

Or you could do a jazz trio:

* Piano (keyboard)
* Bass (joystick?)
* Drums (joystick)

The nice thing about classical music is a lot of the music is old enough to
be usable, legally.

The game's UI could be similar to Guitar Hero, scrolling down the screen.
Or it could go sideways. I imagine the classical music game should look
very crisp and black-and-white, maybe with musical notation. (If one wanted,
they could use some Player/Missile Grahics for some flaming note effect. ;))

Sadly, with a full-time job, a full-time 2 year old, and no real desk setup
for coding on the Atari (my 800XL lives under our TV with an SIO2SD... acting
as an occasional gaming system at the moment), I don't really have the means
to code something.

I'm always full of ideas, though. Anyone wanna get to coding? ;)

Those are some ideas. I remember 'Banjo Picker' from
Antic. Picked chords on a banjo. And then there
was Rhytmizer, if I recall, it did drum beats.

I have used it on Night Driver and Indy 500. Like I said, it work ok, but the
sensitivity of the controller is not as good as it could be.

Yeah I also typed that program in. I was so pleased when it worked. I still
have the disc I saved it to and it still works. Lots of fun.

I always used a joystick. It was a lot easier to use than the paddle an made
the game more fun to play.

The way did that was to get a utility program that would extract all the files
from the ATR file and then transfer them over using the SIO2PC cable.

I've never seen these. I assume they used the keyboard, or did the
articles also include details on making controllers specific to the
programs?

Yes, Banjo Picker gave you about 16 chords to chose
from and 16 rythms, you just hit keys and it picked
the banjo, it was from Antic. Rythmizer you
'programmed' about 10 percussion instruments and
then you could save your program. There was also
Basssynth, which made pretty good bass sounds, again
you hit the notes on the keyboard.

Last-modified: July 20, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I have a Atari 800XL I purchased off ebay. I have been using the
standard RF modulator connected to a small color TV. I recently
purchased a composite cable interface for this system. If anybody is
using this interface, what monitor are they connecting their Atari to?

Thanks

Hi,

Do you have RCA connectors on the end of it?

I made my own cable with RCAs and have it plugged into a Commodore
1084S. At the moment it is just with the composite video out, but
when I get around to it I'll modify my 800XL to output Y/C, which the
1084S can also handle.

David

I think most TVs today have composite and audio
inputs, like for VCRs. You can also use any monitor
that has composite input. I don't understand your question. Unless you got
an interface that allows
VGA input, there are those I believe, in which case
you have to use a computer monitor.

2643. Atari project

12/17/08

I have most of my stuff already brought over to PC, but I was looking for
some .AMS (Advanced Music System) files and realized I never got them
off my 5 1/4" double density floppies. So began my Atari adventure
to get my AMS files, taking most spare time of two days.

I used a 1050 with US Doubler and APE DOS 118 with APE/PRO interface.
Put side 1 of disk (I cut notch in floppy and use both sides),into the
1050, boot off of SpartaDOS in APE, so far so good. I want to make
an .ARC file of the files on disk. So, first, copy all the files off
the floppy onto an APE ATR image. That works, I set APE for 'STUPID',
high speed stuff always results in I get errors. I copy the files to
image in order to hope to avoid errors during the ARChiving process,
rather than archive directly from the floppy. Actually I did try
SUPARC directly from floppy, got CRC errors on some files.

Somewhere about now I try APE mirror to copy directly to the PC, that
doesn't work. Using SpartaDOS I set ('S') the mirror drive, then
on the Atari set the drive to the mirror and type 'WORK.' to get
to the WORK directory on the PC. Now 'COPY D2:*.* D8:' , no go.
I can't copy anything to the mirror (D8:). Mind you, this is a
fully registered APE 1.18.

OK, so APE mirror won't work. Now I run Bob Puff's 'SUPARC.COM'
and archive from APE .ATR image to another APE image, double density,
SpartaDOS formatted. That works (except sometimes there's a few CRC errors
when I test the .ARC file once I get it onto PC.)

To get the .ARC file to PC there are several things I try:
1. APE mirror copy.
2. Copy the .ARC to a single density DOS 2.5/MyDOS APE .ATR.
for use with IMAGEMAN (a PC .ATR utility). IMAGEMAN only
works on DOS 2/2.5/MyDOS single density images.
3. Use Ernest Schreur's 'XDIR' to extract the file from the
.ATR, a SpartaDOS double density .ATR.
4. Use my 'SIOPLUS' and PC 'PCUTIL' programs to pass the file
from floppy to PC 5 1/4" floppy drive. I made these programs
before SIO2PC/APE days.
5. None of the above worked.

During the whole thing, there are errors and failures. What
finally worked was my own 'XTRACT' PC program to get the
.ARC file off of the .ATR image. But that had problems,
I was getting errors, back to PC QuickBASIC to figure out
what's wrong. The file was 51K, fairly large by Atari standards.

So, I thought my QuickBASIC buffer wasn't big enough. That
turned out to be false, as I just kept fiddling with the
program until it mysteriously started working.

This was a two day process. I enjoyed hearing the disk sounds.

During this, I went to my Atari boxes and retrieved something
I was looking for. I dropped my 256K Newell 800XL on the
concrete floor. Today, the day after completing my file
transfers, I plug in my Newell and it is dead, well not dead,
it does come up with a grey screen, but no blue and white 'READY'.
Open up the case and there is the problem, my Newell chip
came unplugged from the socket it is supposed to be in.
Plug it in and now 'READY'. By the way, I used my Newell
RAMROD, two OS 800XL, I like it because the 256K 800XL takes
a long time (like 20 seconds) to 'recycle' if I need to
re-boot, which there's a lot of.

I hope you enjoyed reading about my Atari experience and
have some of your own.

What did you say when you dropped the Atari on the floor? :)

Sounds like a marathon effort indeed.

I am just getting back into my 8-bit atari also and finding after not having used it for about 20 years I am finding it a challenge to remember what software did what etc :). I am very surprised at all the addons for the 8bit, very different to the Atari ST which is very hard to upgrade and really not worth it at all, wasn't a great machine.

I have an SIO2PC cable and am now debating on whether to get a myide device.. ho hum...Would have been great if they were available 20 years ago :)

Hi, again.
I tried XDIR again and it worked. I don't know
why it wouldn't work when I tried it during the
effort. Maybe there's a difference in what a dbldens.atr
has in APE and what I produce with Atari800winplus.?

I'm usually the odd man out...

Just starting playing with my Atari again and in addition to what other people said, from TVs with AV inputs to composite to VGA converters, I bought one of those composite to USB converters for ~$20. Not sure how it would work for twich games because of slight delay but it allows me to use my Atari with my laptop. I imagine my perfect set up with be laptop+SIO2PC/APE+Atari. Only two 120V outlets to supply the computers, LCD display for both laptop and Atari, nice small footprint. I even use my laptop for my satelite reciever display when I am feeling green.

Rick

2651. ICD P/R Connector info...

Newsgroup: comp.sys.atari.8bit
Date: 2008-12-19 03:59:21 UTC
From: phantomm_1 <phantomm@suddenlink.net>
Message-ID: <494b1c1c$0$5460$bbae4d71@news.suddenlink.net>
Source record: 2740

Was the ICD P/R connector Plug n Play or was there a
software disk involved to use it?

Also, isn't there 2 RS232 ports on it, if so, are both
wired the same and have same baud rate capability?

2652. Fiddle Paddle concept ("Orchestra Hero" game idea)

Newsgroup: comp.sys.atari.8bit
Date: 2008-12-19 07:40:02 UTC
From: bill@newbreedsoftware.com
Message-ID: <494b4fd2$0$1651$742ec2ed@news.sonic.net>
Source record: 2741

The idea here is to create a controller like those from Guitar Hero and
Rock Band, but using Atari Paddles. The tought occured to me that lots of
old classical music could be put into a game w/o licensing issues, and
it'd be kind of a funny parody of Guitar Hero to make "Orchestra Hero."

So what I imagine is a fake violin or fiddle with four buttons (one
for each string of the violin, to simulate plucking and fingering),
and a bow that's permanently attached. (Hey, Guitar Hero guitars don't
have strings, either... I'm taking artistic license, here, too.)

Drawing the bow (sliding it left and right across the violin controller)
would roll a paddle pot. Doing this faster would cause louder notes,
for example. (There'd be a string or ribbon on the bow that wrapped around
the pot's knob, so as you move the bow across, it rolls the pot.)

Angling the bow ("/" vs "--" vs "\") would roll a separate paddle pot,
and correspond to which string you're pretending to hit.

(I guess the difficulty here is how to be able to angle the bow without it
merely slightly turning the knob that the string is wrapped around.
I obviously haven't put a TON of thought into this. ;) Maybe the string
could be drawn through a pair of holes on either side of the bow's pot,
which would force the who bow+string+bow-pot rig to rotate...?)

So, with one Atari controller port (the two paddle pots and all four
joystick directions), you've got a game. Throw the "joystick fire" button
on there somewhere to act as 'Start'/'Pause'/whatever.

A freeplay mode (or separate program) could be made, too, and one could
probably make some alright music with it, if it followed a few basic
violin-playing rules. (Thanks, Wikipedia, for enlightening me on short
notice ;))

Now... what's a good source for hardware that I could couble together
to make a prototype for this? (So that I don't have to sacrifice any of
my old paddles or joysticks.)

The P/R interface is marked R1: and R2: and P:

The Atari computer comes with the P: already in the
HATABS (handler table). You have to load a
R: handler for the P/R to use a modem. I don't know
any use for the R2: port.
Bobterm comes with the R: handler built in, I believe,
is why Bravo doesn't mention an R: handler. For
some modem software, like IceT, you have to load
an R: handler.

Video 61, Bravo Sierra, B&C (Myatari.com), Best
Electronics, ebaY, and someone with a spare here.
I donated my paddles to someone long ago, as I
almost never used them (seems like I used them on
PONG on a 2600).

Thanks for the info,
I'd like to find out some tech info, on how the 2nd RS232 port is wired.
And how I can use it from Basic or etc.

I've got a idea in mind for a project with it.

Well, I don't necessarily need to sacrifice classic Atari hardware.
I just need a pair of compatible potentiometers, some buttons, a 9-pin
DIN plug, and some wires.

I should check the FAQs to figure out what the specs on the pots are.

I guess you want to use R1: and R2:.
The P/R R2: is a limited port, to only XMT, pin 3
and RCV, pin 4.
In BASIC, you open a channel to the port you want,
usually in concurrent mode (in and out on the same
channel). Then do a STATUS on some location
that the R: goes in and out of.
I have some simple BASIC program that illustrates
BASIC programming with the RS232 ports. I'd have
to search for it.
You have to load a R: handler.

This is just the program without the REMs.
It is a minimal term program, actually works at
300 baud. Of course you gotta have a modem
connected to the Rn: port and R: handler loaded.

```
10 CLOSE #2:OPEN #2,4,0,"K:"
20 CLOSE #3:OPEN #3,13,0,"R:"
30 CLOSE #4:OPEN #4,8,0,"E:"
40 XIO 34,#3,192+48+3,0,"R:"
50 XIO 40,#3,0,0,"R:"
60 XIO 36,#3,0,0,"R:":REM MUST BE 300, PROG. TOO SLOW FOR 1200 OR HIGHER
100 STATUS #3,AVAR
110 IF PEEK(747)=0 THEN 200
120 GET #3,CHAR
122 IF CHAR=0 OR CHAR=10 THEN 200
124 IF CHAR=13 THEN CHAR=155
130 PUT #4,CHAR
200 IF PEEK(764)=255 THEN 100
210 GET #2,KEY
212 IF KEY=155 THEN KEY=13
220 PUT #3,KEY
240 GOTO 100
```

VCS Indy 500 is the only released game that supported the driving controllers. A few VCS homebrew games, such as Stell-A-Sketch and Thrust Plus also support it.

I don't know of any 8-bit games that support it. 8-bit Livewire has options for joystick and paddle, but not the driving controller.

And also.... there isn't an exit from the program,
if you just hit RESET, you leave channels 2,3,4
hanging open, which can cause problems, like
trashing a disk. So, run this after hit RESET.

```
10 FOR N=1 TO 5
20 CLOSE #N
30 NEXT N
```

That'll avoid some problems with channels left
open.

Or, you could use your DVM and measure the pots in
an existing set of paddles, which would require the
removal of 2 screws, I think, could be 3. ;-)

Hey,
I really appreciate the help and program.
This should get me started with a few experiments.

BTW, I've a 1Meg MIO also, Is there a way to access the
RS232 port on it from Basic?

I think you can turn the port off in the MIO config menu, if so
is it possible to turn it on and program it from basic on a 800XL?

One thing I'm going to try is having both the MIO and the ICD P:R connector
connected to a single 256K 800XL.
And use the RS232 ports for projects and etc..

I'd like to use the MIO RS232 for Modem access, and the 2 RS232 ports on the
ICD P:R for other stuff..
Is that cool or what! 8-)

You're thinking a major experiment with R ports.
Somehow, the hardware knows which R device
it is, I suspect you can't use both an MIO R port
and two P/R ports at the same time. You can
access the MIO R: port, but I would guess it
has to be R1:
Rick Cortese may know how multiple R: ports
would work.
I believe you can specify Rn: in the BASIC program
I gave, rather than R:. Seems like I did see up to
R4: someplace, but that would have to be hardware
specifying. The 850 has four R: ports, and two
printer ports. That is the only way I think you can
access 4 R: ports. You'd have to have the 850
documentation about that.

2667. looking for XL/XE ROM files and memory test question

I think you are right in that both the PR:Connection and MIO are hard
wired/ROM to think they are the only RS232 device so both the MIO and PR:
will try to be R1: and fail to respond properly.

I've always been bad on form but I think the explanation of the STATUS
command was ~AVAR in your example would be 'a dummy variable' necessary to
get the OS to check POKEY for a byte ready. 747 would be the RAM flag byte
set by the OS as a result of the STATUS command. I think it was just an
oddity of Atari BASIC that you had to stick a useless variable in there so
you don't get a syntax error.

When in concurrent I/O mode for RS232 you can't use anything else on the SIO
buss. That is, if you are just using the serial ports for something like
printers you can keep them open and still use things like the disk drive. In
concurrent mode, it is like the POKEY chip is directly attached to the
serial device/modem and it can't do other devices w/o being set back to
multiple device mode. One of the reasons we always had buffers in our
communication programs was so we wouldn't have to switch POKEY every block
to save things to disk. We always had that ~7k buffer fill, set modem hand
shake either software<^Q^S> or hardware, write buffer out to disk, restart
modem.

And yes, BASIC is to slow for anything above 300 BAUD. I think you can get
to ~1200 BAUD if you both use a fast floating point and Turbo BASIC. I never
tried some of the OSS BASIC versions but I'd guess they might be quick

enough. I did use MMG BASIC compiler with an early 80 column terminal program I wrote and it could keep up with screen and serial port to 2400 BAUD. About that time I switched to Action! so except for some assembler I became a one trick pony.

A real problem with anything hung on the SIO buss is POKEY only has a one byte buffer. Soon as you know something is ready, read it or lose it.

Rick

Interweb told me they're 1 megaohm, linear.
I bought a pair of POTs. I didn't notice at first that they also act
as switches, so they 'lock' into the off position. I'll see if they're
suitable. (It might actually be useful to 'lock' the fiddle when you're
not using it.)

I'm still figuring it out, but had fun wiring up my first 9-pin d-sub from
scratch. :)

The OS is available as part of PC XFormer 2.5, which was released as
shareware. (Atari800, the Open Source emulator, for example, is usually
used with these. Atari800 can't actually redistribute them, since the
agreement between Darek Mihoka (who made PCXF) and Atari at the time, was
that he could use them, packaged with his emulator. So the Atari800 website
just has a copy of PCXF that you can download, unZIP, and grab the ROMs from.)

The three OSes I usually see emulators asking for are, I believe:
OS RevA (400/800), OS RevB (XL/XE) and the Atari 5200 OS.
I'm not sure how much they differed between models (e.g., 65XE vs 800XL).
Check this group's FAQs.

Yeah, 1 MegOhm sounds correct. Push shaft switches,
hmmm, yes, I remember something like that. Should
I pull out a few and see how they are in real-life?

Found this site, which details all the different OS versions (there's
2 for the 400/800s and 6 for the XL/XEs)

http://www.faqs.org/faqs/atari-8-bit/faq/section-59.html

Can't seem to get Rev1 (apparently the OS for the 600XL) to work in
Atari800Win though (immediately crashes).

It lists a site that offers the ROM for an Arabic 65XE, but the link
is for a text file :(Apparently the roms for the 1450XLD are also
floating around somewhere.

http://www.savetz.com/vintagecomputers/arabic65xe/

> XEGS. Does anyone have them or know of a site where they can be
> downloaded?

Out of curiosity, or to have them work in an emulator?

> Also, does anyone have any technical info regarding the built-in
> memory test with the XL and XE machines, regarding the on-screen
> "blocks" shown and what chip location each refers to?

Each block is 1K of memory. However, this test is partially bogus. The test doesn't really test any memory "under" the self-test area, and it neither tests the display area and the first 1K block. Instead, it just waits for a while and then highlights the block. The remaining memory is "sort-of" tested (not very elaborate, though, for a real test you should write into the memory completely, then read the data back. For example, if two address lines have a short, this "test" wouldn't be able to detect it.)

So long,
Thomas

http://members.chello.nl/taf.offenga/osroms.txt
probably has the most extensive info on OS versions, the site used to
offer the files but no longer does.

http://vjetnam.hopto.org/
has the above file zipped within at least one OS file offerings.

As already related, the self-test does not show the desired
correlation between blocks and chips with only some of memory tested
as such. Most recent 130 XE OS has additional memory test code for
64k of extended memory code that does show as four larger blocks below
standard grid of small blocks but ONLY if the machine is equiped with
at least 64k of extended memory. Larger ramdisks are not tested by
this code.

The same extended memory test code exists in the XEGS machine but
since that machine does not have any extended memory, the test shows a
standard set of memory blocks and not the four large ones at the
bottom. XEGS OS will also include missile command code on a larger
eprom so it's not very common - read hard to find. I don't think ANY
emulator runs it either.

From: Angry Dove <what@mail.net>
Message-ID: <MPG.23bf655b5d3ae0c89896ac@news.mts.net>
Source record: 2671

Hi, I got a 800 and it seems to work fine except for games.
When using any of my Wico joysticks in port 1, the game keeps turning to the left. Is this a bad chip or something? All my joysticks work fine on my other 8 bit computers including Ataris.

TIA

All the memory chips in the XLs are 1K each, correct? If the test is
actually that poor, that might explain the few test results I've seen
showing bad memory (with most of the RAM blocks being red).

Y'know, for all the bragging that Atari did about that self-test
program back then, you'd think they'd at least spend the time to
ensure it was accurate (i.e. something worth having). Bad enough
owners weren't given any info regarding possible problems showing up
in the test, but then to learn that the test itself is somewhat
worthless anyway... :(

Here's a BASIC memory test program designed primarily for the
400/800s:

http://www.atariarchives.org/c2ba/page015.php

A memory test program also appeared in an issue of Analog. Cyberroach
has the article but not the program:

http://www.cyberroach.com/analog/an11/util5.htm

Atarimania has a listing for a "Supplemental RAM test" (by Atari), but
they don't have the software:

http://www.atarimania.com/detail_soft.php?MENU=8&VERSION_ID=18549

Atari800Win will run the XEGS OS. I noticed it still stamps out a "1985" date on the keyboard test (it *should* be 1987). I don't have an XEGS at the moment - does it actually give 1985?. Also, if you configure it for 128K (in Atari800Win), it'll show the 4 large (extended memory) blocks in the memory test; however the screen will blank out when it gets to that part.. And like the 130XE ROM, if you select 'all tests', when it gets to the A/V test, the picture is a solid red screen (and the keyboard test is a solid green screen). I don't know if that's an emulator issue (like how the ROM test portion always fails). I can't imagine a real 130XE acts like that, but again I don't have access to a system at the moment to verify.

I wonder if the Rev 3 and Rev 4 versions do the same sketchy method of testing the extended memory?

Btw, the same ROM info and files can be found in the links I posted earlier.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

FWIW: 64k bits by 1 bit wide. This is one of the problems with testing, the
entire range of each chip can be used. It's not like you can test 8k blocks
and pin point the bad RAM chip. As mentioned above, often as not it is an
adress line that goes out on a chip which makes it hard to tell just what
the problem is.

BUT if you have a socketed XL it is usually only a matter of swapping out
chips one at a time with a known good chip to find the bad chip. I still
damm them for not having everything socketed, BASIC and OS soldered in, et
cetera. Sockets would have only added a buck or two on the price of a
computer. IMO it would have been made up with the ease of reworking a
socketed vs. soldered MB.

Early 800XL releases came with those chips in sockets. Later models
didn't. I've two 800XLs here, one with socketed chips, and the other one
with chips soldered in.

They likely wanted to bring the production costs down the later release.
Even if it is only 1$ extra per board this means a lot, plus the
necessity of having a machine that inserts the chips into the sockets,
plus the trouble of chips getting loose on the transport, etc. etc....

So long,
Thomas

D'oh.. that's what I meant to post (late-night posting = never
good :/)

As Thomas mentioned, only the first batch or so of XLs had socketed
chips. And when Tramiel took over, nothing was socketed (in the XEs.
Don't know about anything else).

My Name is Sal (aka. kjmann on atariage) President of Atlantis Games Group.

I just wanted to post a notice here that Tempest Xtreem has been completed and Carts are being made as I speak.

If anyone is interested in obtaining a copy of the game, it can be ordered from www.atarisales.com (Video 61).

It's not on the website lists yet but Lance is taking Pre-Orders by Email or phone (651-462-2500)

A playable demo of the game can be downloaded from our website at www.atlantisgamesgroup.com in the Tempest project area, selectable from the menu on the left.

Hope everyone likes the game and Hope you all have a good holiday. =)

Dear Russ, I've added at the bottom a post from Michael Current. He's A great treasure and Atari Resource! Someone E-Mailed me the game I was looking for! I was able to transfer it to a 5.25" Disk so I can play it on my 800xl! I would like to be able to transfer any file this way using the XFormer cable that I have! Unfortunately, the Transfer Utility wont transfer just any file. I need to transfer any file from my ST to 8 Bit using the Transfer Utility!

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE, 130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from 1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the home market rights to the Atari trademark itself, are owned by Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA. http://corporate.infogrames.com/

Very cool! I discovered your game on YouTube a while back. Thanks for
posting about it here on c.s.a.8!

> A playable demo of the game can be downloaded from our website at
> www.atlantisgamesgroup.com in the Tempest project area, selectable

You should really consider toning down the background on the Tempest Xtreem
page, it's almost impossible to read the text! :^(

> Hope everyone likes the game and Hope you all have a good holiday. =)

I haven't tried it yet, but I'm curious... did you happen to support
Driving Controllers (the ones that came with the Atari 2600 game "Indy 500")?
Depending on the gameplay, that might make for a much more authentic
experience (since it's the same kind of controller as in the arcade...
I also have a rotary controller for my Jaguar, for playing Tempest 2000).

Thanks and happy new year!

PS - If you want any ideas for games, I'm full of them... just not enough
time or experience to code anything good, these days. ;)

I was thinking that too. I'll look into it.

No we didn't support that. for several reasons. one, the joystick
routines that pete wrote are very responsive. I'm a tempest 2K fan and
even I like it. two, there was not enough room in the cart for
anything more. and three, the driving controllers are not easy to come
by.

> PS - If you want any ideas for games, I'm full of them... just not enough

Yes, I neglected to mention the FAQ.
Michael Current keeps up with URLs and
sources for A8, an excellent source.
I have my own archive, but it isn't accessable
except to say something needed and let me search.
I don't have the POOL disks, but I do have
a lot of stuff, CTH archive, Holmes archive,
a German archive, and my own collections from
the days. ftp.pigwa.net seems extensive, maybe
too extensive, as I can't find stuff on it.

> Was the ICD P/R connector Plug n Play or was there a
> software disk involved to use it?

The P:R: Connection did come with a disk, I have one here.

Side 1 (single density) contains:

Atari DOS 2.5 (DOS.SYS, DUP.SYS, RAMDISK.COM)
RS232.SYS (also part of DOS 2.5, loads the R: handler from the ROM in an
850 or P:R:)
RS232.COM (same effect as Atari's RS232.SYS but intended for SpartaDOS)
PRC.SYS (SIO emulation R: handler)
850 Express by Keith Ledbetter
RSCOPE by Joe Miller

Side 2 (enhanced density) contains:

Atari DOS 2.5 (DOS.SYS, DUP.SYS, RAMDISK.COM)
AMODEM 7.4 by Trent Dudley

> Also, isn't there 2 RS232 ports on it, if so, are both
> wired the same and have same baud rate capability?

Page 7 of the P:R: Connection manual states:

"Port 1 ('R1:') is a full port which contains all necessary handshaking
lines that some MODEMs and other devices require, and port 2 ('R2:') is a
stripped port containing only the receive and transmit lines (the DTR and
RTS lines are held in the "ready" state if needed). The P:R: Connection
DOES NOT include a current loop port like port 4 of the old Atari 850."

So the Wii has the "Balance Board", a platform you sit or stand on,
for playing games that involve exercise and balance (e.g, "WiiFit").
It's really just a more high-tech version of the Joy Board from Amiga
(back when they were making joysticks).

If I recall, the Joy Board was just a digital joystick, and I assume it could
only provide the 8 directions or neutral.

The Wii Balance Board seems to be more analog, and can accept more
input at a time (kind of like 'multi-touch' on iPhones and iPod Touch).
For example, you can use it as gas and break pedals in racing games.

So, as I continue to think of how the Atari 8-bit computers could compete
with today's fun hardware (see my recent posts on Fiddle Paddle and
Orchestra Hero), I started thinking of how to make something more akin to
the Balance Board.

At first I thought just using a pair of Paddle inputs would suffice.
You'd get varying pressure to the front/back and left/right. However, that
wouldn't work for all games, only the balance-style games.

So, without really knowing anything about the Balance Board (hardware
internals, or what kind of input data software can receive from it), my
current thought is to use a PAIR of paddle inputs (which would mean using
up to controller ports). That would be able to detect pressure at four points
(either each corner (X), or each side (+)).

Heh, and while composing this post, I went over to the WikiPedia article
on the subject, and read:

"In early development models, the balance board was a simple scale
with only one pressure sensor. However, the developers realized that a
simple scale wasn't a very useful game accessory and eventually
expanded the number of pressure sensors to two, and then finally
four. The idea to use multiple sensors was partly inspired by how sumo
wrestlers weigh themselves (using two scales)."

So... I'm apparently on the right track. :)

I guess I now need to search for four pressure sensors that I can tie
into the Atari's POT lines. Something about 5V, 1Mohm, linear. :)

Hey Bill,

Why not try to simply interface the Balance Board to
the Atari system? It should be fairly easy once you
have got the proper connections figured out, but, it
also may require a bridge circuit. I'd be happy to
assist you if you so desire.

Well, a few reasons.

1. I believe the Balance Board sends 16bit digital values back to the Wii
2. It talks to the Wii wirelessly (over Bluetooth?)
3. I have no Wii, so I have no other reason to buy a Balance Board
(and if I did have a Wii, I wouldn't want to hack the Balance Board in
such a way as to make it unusable with the Wii)
4. I want to learn more about electronics

Searching about paddle controllers a while back, I found an archive of
an old series of Atari magazine articles on how to make a robotic arm.
(Use the joystick pins as output to control step motors, and use the paddle
pins as input to know when the joints have moved far enough.)

THAT sounds like a cool project, though I may have to wait until my son is
older.

These days, PCs are all heading towards USB, and I think it's way easier
to program an Atari with PEEK and POKE and wire up some simple digital and
analog cabling to do these kind of little projects. (Without buying whole
kits... and then I'm sure most of those kits are Windows-only, and we don't
run Windows in this household :))

Interesting project.

Were there not any Atari 8-bit wireless devices?

On the Atari ST, there are wireless mice, trackball and a few others I
think.
These connected to the standard 9 pin Atari joystick port.
I still have the ST Wireless TrackBall......

What about the Atari 8-bit LightPen, wasn't that sort of wireless or
am I mistaken, I never got ahold of one.

The Party Quiz Game by SunCom for the Atari 8-bit came with
4 Controllers for 4 players. Each Controller had 4 large buttons
to press for giving your answer.
Not wireless however.

Just thinking outloud.....

I only knew of the wireless (RF) joysticks that Atari made for the 2600
(and/or for a specific wireless version of the 2600) back in the 1980s.

<snip>
> What about the Atari 8-bit LightPen, wasn't that sort of wireless or

No, it has a regular cable plugged into the joystick port.

Those are probably just wired to joystick pins. I assume when you say
it has 4 controllers, that it has a separate 9-pin controller plug for each
controller, and hence would only work with 2 players on the XL/XE.

From what I remember, each controller had a telephone type connection
that plugged into a Jack which then connected to the 8-bit Joy ports.

afaik, all 4 controllers could be used on the XL/XE, I use to have one and
briefly tested it on either a XL or XE. Seems I recall a label on the box
that it was XL/XE compatible. Think I still have the software but sold
the game years ago. Someone cracked the game so it could be used without
the controllers, think I have that version of software here in the
collection too.
I still have the Animation Station (drawing pad) made by SunCom for A8-bit.

The SunCom stuff wasn't that old when Atari folded on the 8-bits.

Never assume, 8-)
.

2708. Re: Help with Atari Emulator!

Newsgroup: comp.sys.atari.8bit
Date: 2009-01-04 16:26:12 UTC
From: Michael Current <michael@mcurrent.name>
Message-ID: <op.um8qmfbqgaat7c@mdc>
Source record: 2697
Cross-posted to: comp.sys.atari.8bit,comp.sys.atari.st

To follow up, here's what I think I've figured out.

The Transfer Utility Ben mentioned comes with ST Xformer, the 8-bit Atari emulator for the Atari ST. ST Xformer doesn't recognize .ATR image files, the most common Atari 8-bit disk image file format by far, so this complicates things for someone in Ben's situation (with an ST, but no PC handy).

Ben thought he needed image files in the .SD or .DD formats in order for them to be recognized by ST Xformer, so he could use this Transfer Utility to get them to the 8-bit. I had never heard of .SD or .DD. But I just found this in the README that comes with the ST Xformer 3.0 sources:

"The disk format used by Xformer is "XFD" (Xformer Floppy Disk) also known earlier as .SD or .DD depending on the density. In Xformer 2.4 I added the ability to access pretty well any size disk image, so the extension XFD was picked to be a generic case. The XFD format is quite simple. It is just a sector dump of a real 8-bit drive. Take the number of sectors on the disk and multiply by the sector size (128 or 256) and that is the size of the XFD
file. No headers, no extra info."

So that answers the .SD and .DD question, they're just .XFD!

Furthermore, I just rediscovered a utility that runs on the ST that converts .ATR to .XFD image files. "ATR to XFD 1.0" for the ST by Miro Kropacek (MiKRO) is available at:
http://mikro.atari.org/

So, I hope this is helpful to Ben, and any others following along.

Let me know if there's still more to this story than this!

-Michael

So I went to the local electronic store and sadly, they didn't have anything suitable (no pressure sensors of any kind). They said that a piezoelectric one would do, but would require some amplification. The other idea they suggested was to use a potentiometer (and, I assume, some gears? -- starting to sound like a bit of work) and some springs.

Any ideas from the c.s.a.8 crowd?

It would be hard to show you in text but here is an idea.

Make a base 1' x 1' On this base add a pivot point in the center and
below this point put in 2 pots under the pivot. At each corner you
need a lttle pulley wheel.

Now make a top that sits on the pivot point and has a wire that goes
from corner to opposite corner on the underside, in an X pattern.
These wires pass through the pulleys on the base and wrap around the
stem of each pot. Add a spring on each side of the base to hold thetop
level and to return it to level. Now when the top is leaned in any
direction it will turn the 2 pots and you will have the direction of
lean.

I think I understand what you're saying.

> Make a base 1' x 1' On this base add a pivot point in the center and
> below this point put in 2 pots under the pivot. At each corner you
> need a lttle pulley wheel.

So your idea uses only two POTs. Assuming values of 0-255 for them
(which is inaccurate, but whatever), then if POT-A is the
top-left to bottom-right detector, and POT-B is the top-right to bottom-left
one, then:

* Neutral: 128,128
* Leaning left: 0,255
* Leaning right: 255, 0
* Leaning fwd: 0, 0
* Leaning back: 255,255

That there really might be sufficient!

The other idea I had for this pad is a pass-through port for 1 or 2 joysticks
(depending on how many controller ports I need to connect to, which depends
on how many POTs I need to be able to read).

That way you can plug a joystick into the pad, at your feet, and control
some of the action that way (not unlike holding the Wiimote and Nunchuck on
the Nintendo Wii).

Games written to support the pad could just read both paddles and the
joystick+fire input from a port.

I've not tried this software yet.

But I don't seem to have a problem with my MIO at 19200 Baud.

The only thing I had to do was disable the FlowControl on my 14.4 Zoom
Modem. Never had any problem with errors or etc. And downloading
stuff to the MIO RamDisk or Hard Drive was always fast and error free!

Used BobTerm most of the time.

2715. Atari Touch Tablet & AtariArtist

Newsgroup: comp.sys.atari.8bit
Date: 2009-01-05 21:15:16 UTC
From: bill@newbreedsoftware.com
Message-ID: <49627864$0$1587$742ec2ed@news.sonic.net>
Source record: 2554

My Atari Touch Tablet and AtariArtist software just arrived in the mail,
and I have to say, it's pretty awesome. :) I'm enjoying the paint software
(I esp. like that it's on cartridge), although it has a few features that
make it a bit of a pain to use. (No oval/rectangle, just circle/square,
so far as I can tell... I need to read the manual. And no Undo feature.
That's dangerous when you mistakenly hit the wrong pixel with the Fill
button!)

I also received an Atari Light Pen and AtariGraphics software (which looks
neat, if a bit strange, UI-wise). However, my Atari 800XL is currently
hooked up to some new fancy Zenith HDTV (CRT) that's progressive scan
(so all my old video game systems look a bit... off). Seems like the
lightpen doesn't like it, so I'll have to dig out my C= monitor to give
it a whirl.

I'm pleased that the Touch Tablet is so insanely easy to program for.
(Just check PADDLE(0) and PADDLE(1)) I intend to hook it up to my Linux
box via my Stelladapter. I'm hoping it will Just Work(tm) and I'll be
able to read the tablet input as analog USB joystick input.

The stylus on the Touch Tablet seems cooler than the plastic stick that
came with the Koala Pad (my brother had one for his C=64), since it connects
to the tablet via a little cable, and has an action/control button.
(So you don't need to use your other hand to hit the buttons on the tablet
itself.)

I grabbed it for ~$25USD from B&C ComputerVisions, new in box.
(So I got to be the first person to open up this 25 year old box.)

If I'm not mistaken I believe you can take advantage of the component video input found on most modern TV's sold today. I thought I read on a discussion forum that chroma / luminence outputs of the 8bit support component video.

This device also looks promising:

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

> able to read the tablet input as analog USB joystick input.

Sadly, it did not 'just work.' It noticed a pair of axises and some buttons.
(I didn't realize, but I guess I'm not surprised, that each of the buttons
(left and right side of tablet, and on the stylus itself) all register
as different buttons.)

However, when I pushed on the tablet with my finger, the X/Y coords never
left -32767,-32767.

(This was using 'jstest' after plugging the Tablet into Stelladapter,
and Stelladapter into my Linux laptop's USB port. "jstest" is part of the
"joystick" package in Ubuntu (and likely also in Debian))

If anyone has any other ideas, I'm game. :)

2719. Touch Tablet compatible games?

Newsgroup: comp.sys.atari.8bit
Date: 2009-01-06 07:46:30 UTC
From: bill@newbreedsoftware.com
Message-ID: <49630c56$0$1609$742ec2ed@news.sonic.net>
Source record: 2558

So Googling around just now, I discovered a game that came out recently
(there was a "Christmas 2008" edition of the game) that apparently supports
Touch Tablet as input. It's called "Click!", and I haven't tried it yet.

What other games support tablets? (Obviously, any game that supports
a paddle should work reasonably well, but I'm curious about games that
specifically support the Touch Tablet.)

Also, it seems Koala Pad has an upside-down Y-axis, compared to the Touch
Tablet. (Was this simply because they were being devloped at around the
same time? You'd think whichever came out second would have attempted to
be compatible with the first. :^/)

Even though that web site mentions Atari, the input specs do not include
chroma and luminance which IIRC the 800 monitor jack provided
instead of true RGB; I would be a little skeptical of compatibility with the
8-bit video.

You know that black foam static protection they plug ICs into? It is conductive carbon foam and the conductance is proportional by some factor to how compressed it is. Idea wasn't original with me, that guy who writes for ~Popular Electronics Forest Mims<sp?> came up with it.

Anyway, the charge pump on the Atari paddles is just about right for two pennies with wires soldered to them and a piece of that foam in between. I did some odd experiements with them back in the day. Something like a scale made out of a 2x4 where the foam sensor was placed to detect the amount of bend in the 2x4. It had some problems, slow memory foam and had to be recalibrated every time I used it kind of stuff. The foam doesn't do well when it is left for a long time in the air either, turns hard and doesn't rebound.

I stumbled across someone who talked about doing this (to make sure thier
robot hand didn't squeeze too hard).

Doesn't sound like a good, reliable, long-term solution, though. :)

Conductive black plastic foam works great, but--as you note--it does become rigid with age.

I've also used non-conductive rods or paddles coated with conductive ink. Bending the rod or paddle changes the resistance.

Thanks for the tip! I just happen to have some of that carbon based
conductive paint I bought off of eBay to repair some remote control keypads.

BTW: I'm glad to see you are still around. Your magazine articles and
booklets at Radio Shack were a great introduction to fiddling with
electronics. My training was as a chemist so a lot of your stuff was just
the right level for getting me some experience in electronics. You and Don
Lancaster were my favorite authors.

There are two such lists in the FAQ:

Subject: 8.7) What programs have a paddle(s) or Koala Pad mode?

This section by Andreas Koch.

- Arachnid (PD)
- Arkanoid (Taito)
- Asteraxis (PD)
- Avalanche (Atari)
- Balloon Game (B. Williams)
- Birdman (a demonstration by AMC)
- Break Wall.BAS (PD)
- Burgers !
- Cascade.BAS (PD)
- Castle Crisis
- Chicken (Synapse)
- Chiseler (from Analog mag.)
- Downhill.BAS (PD by M.Reid)
- Etch (a painter program)
- Frogfly.BAS (PD)
- Hardware-Tester by F. Dingler
- Horse20.BAS (PD)
- Landing.BAS (PD)
- Junkyard Racing (PD)
- Landing.BAS (PD)
- Livewire by T. Hunt (Analog mag.)
- Livewire 2 (Analog mag.)
- Midtrip.BAS (PD)
- Nineball (ZiMag)
- One on One (from Compute!)
- Paratroop Attack by D. Plotkin
- (all) Pinballs created with the P.C.S.

- Planetary Defense (Analog!)
- Pong (from Antic!)
- Pong (from Analog!)
- Pong 3 (PD)
- Prison.BAS (PD)
- Ratapede (PD, Millipede clone!)
- Safecracker.BAS (PD)
- Slime (Synapse)
- Space Eggs (Sirius)
- Super Ball (Compyshop mag.)
- Super Ball 2 (Compyshop mag.)
- Super Ball 3 (Compyshop mag.)
- Super Ball 4 (Compyshop mag.)
- Super Breakout (Atari)
- Super Clown.BAS (PD)
- Stretch (Gr. 15 pict. stretcher)
- Superski (AMC, patch by Homesoft)
- Tilter.BAS (PD)
- Trailpad (from Antic or Analog)
- Warlord
- Wildwest.BAS (PD, Kaboom clone!)

for Koala Pad only:
- KoalaPainter
- Koalpad.BAS
- Ksketch.BAS
- Koalask.BAS
- Tablety.BAS
- Edmac
- Pixel Artist Deluxe (PAD) 1.3

Subject: 8.9) What programs have a Touch tablet mode?

This section by Andreas Koch.

- AtariArtist (Atari)
- The Brundles (KE-Soft)
- Edmac (PD)
- Hardware-Tester by F. Dingler
- Hit the Mole by C. Strotmann
- Multi-Mouse Management (PD) by Simon Trew
- Musorqua (Analog computing)
- Pixel Artist Deluxe 1.3 (PD)
- Picture Enhancer (PD)
- Tablety.BAS (PD)
- TTCalib.BAS (PD)
- UPN calculator (PD)
- Word Search.BAS (PD)

> Also, it seems Koala Pad has an upside-down Y-axis, compared to the Touch

Yes, I only just recently learned this too. I need to figure out how to
get this information across in the FAQ.

Does anyone know off hand of the compatibility of the Chalkboard Powerpad
or the Suncom Animation Station? Are they compatible with the KoalaPad,
or the Atari Touch Tablet?

Michael,
Andreas Koch is exhaustive, but I saw something
that piqued my curiosity. The illustrious Tom Hunt
is/was a giant in Atariland, but he didn't write
'Livewire' in ANALOG, that was Tom Hudson.
Minor nitpicking, sorry.
Livewire and paddle version were in issues 12 and 13
of ANALOG. I'm not familiar with the paddle version.

Has anyone tried playing M.U.L.E. with a paddle? The part where you set
up the game seems to indicate you can, but I can't even imagine trying
to park a M.U.L.E. on your lot using one! :) (However a touch tablet
could actually be easier than a joystick if it works like a mouse.)

ICD Multi I/O RS232 Port Speed

Has anyone tried to upgrade the MIO RS232
hardware for faster Baud Rate?

I know this has been done on other systems,
Seems possible to do a chip replacement.

And probably possible on the ICD P:R connection
too.

28.8 would be good for a start.

And has anyone tried to do anything with the MIO's
Video port?
Surely it could be used for something if it can be
accessed with software.

Also, am I correct that not all MIO's have the Video Port?

2730. Atari 8-bit graphics and audio software info

I need some info about the best and latest software/hardware
available for viewing Pictures from other computer systems on
the Atari 8-bit.

I know of software that allows viewing of .GIF pictures.
Have there been any software updates that allow faster
.GIF viewing and any other Pic. formats in the past few years?

IIRC, there was a hardware scanner/Digitiser or two made
for the 8-bits. Anyone recall the name of those and or
have the hardware and software?

On the Audio side of things,

What are some of the best Sound and Music
players?

Are there any programs that plays Audio files from
other computers systems?

What were/are some of the best Audio Digitisers for the
Atari 8-bit?

Also, are there any type of Conversion programs that run on
the Atari 8-bit that convert Audio and or Picture
files to a PC or Atari ST format?

Any PC programs for viewing/listening and Converting
Atari 8-bit Audio and Graphic files to other formats?

Any info is much appreciated.

I don't know/have answers to any question except
audio digitizer.
Parrot did a pretty fair job. I forget how you made
a microphone input. I have it somewhere, I think.
There had to be an interface to plug a microphone
into the joystick port, but I don't remember. Now
I have to look for stuff.

I don't know about increased baud rate for the
MIO or PRC, suspect about 9600 is tops. The
Atari has a native rate of 115,000, that's how
fast stuff travels around on the bus, but I'm not
a hardware guy.
The early MIOs have a video port that has some
connections, but isn't servicable. ICD advertized
that it would be upgradable to an 80 column
RGB port or composite, but it never happened.

I looked, I don't have Parrot any more.
It came with an interface to plug an audio
device into that was a modified paddle device with
a jack port. I remember making a sound file
playing my cornet into a microphone. It was
interesting, but I didn't use it and I guess it got
thrown out.

There was a pair of GIF decoders that viewed in various modes,
including 256 color (by cycling between 16 hue and 16 shade mode)
and 4096 (by cycling between three 16 shade modes, R G and B).
APACView and ColrView are what you seek, IIRC.

> IIRC, there was a hardware scanner/Digitiser or two made

> have the hardware and software?

I had ComputerEyes for a while, but had little use for it once
I had access to modern PCs, so I got rid of it. I also had a Parrot.
The ComputerEyes software could do 4- and 16 greyscale mode, IIRC.

> On the Audio side of things,

> What are some of the best Sound and Music
> players?

There are probably a LOT of music players for the Atari that play
Atari music formats. I'm not too familiar with them.

> Are there any programs that plays Audio files from
> other computers systems?

Yes. You could convert WAV to a digital format on the Atari
(similar, if not identical, to the format Parrot generated), I think.
There was also an Amiga MOD player that worked pretty well for small,
basic MOD music files.

> What were/are some of the best Audio Digitisers for the
> Atari 8-bit?

I only used the Parrot. In poking around Google lately, I discovered
an article that explained how to build, essentially, a homebrew Parrot.

> Also, are there any type of Conversion programs that run on
> the Atari 8-bit that convert Audio and or Picture
> files to a PC or Atari ST format?

Yes, all of the above I mentioned run on the Atari.

> Any PC programs for viewing/listening and Converting
> Atari 8-bit Audio and Graphic files to other formats?

Yes, very likely. A lot of demoscene folks render nice graphics on a PC
or ST or Amiga, and then convert to something they can display on the Atari.

> Any info is much appreciated.

Sorry I can't name many names, it's been a while since I did any
'real computing' with my Atari 8-bit. I look forward to catching up with
this thread, to see what other answers you get!

Good luck!

I connected my Parrot to my VCR and recorded stuff off TV.
You could use a mic or a tape recorder too, of course. Just make sure
the volume's adjusted right.

For music, I think the most widely used was the
AMS, Atari Music System format, by Lee Actor.
There were also public domain AMS players.

The MIO used a 6551 chip.
http://www.westerndesigncenter.com/wdc/documentation/w65c51s.pdf

for the data sheet if you want to have a look. While it could have been
easily fixed in silicon by adding an extra divide by register or maybe a
different prescaler, I know of nobody who did it. Maybe you can find some
outfit that did it but I am pretty sure none of the usual suspects modified
an MIO or manufacturer modified the silicon. I was kind of suprised when I
saw ICD used a 6551 myself as it was already considered obsolete when the
MIO came out: More of a quick and dirty hobbiest type chip rather then
something a professional would use. I guess in theory you could do it in a
PLD and adapter for a 28 pin socket but there aren't enough people with MIOs
for it to be anything other then a mental exercise. The data sheet suggests
you could just change the crystal i.e. use a 3.68 mHz vs. 1.84 mHz but I
know of no one who has tried this. I did make a cartridge version of a 6551
years ago but it didn't have interupt capability<limit of the cartridge
port> and I never used anything but a standard crystal.

Almost academic in that for doing anything other then blind transfers the Atari couldn't keep up. Things like file transfers where you weren't echoing things to the screen would have been fine.

Story I heard on the PR:Connection was ~the micros that went into them were over runs that a chip manufacturer dumped on the market. Something like 10+ years later FTE still had a pallet of them for sale at fire sale kind of prices and they still didn't sell them all. The PR:C had on chip ROM and were ~surface mounted to PC board so it would be near impossible to fix.

With all these older chips and even using SIO2PC is tiny hardware buffer either on POKEY or the chip itself. More modern chips like the 16550 give you about a dozen bytes of buffer which gives you a little elbow room to work. Thing is even those chips are decades old and nobody uses them anymore. Everyone seems to have gone with those all in one chip sets from various manufacturers that include IDE, floppy, printer, two serial ports, ???. I remember TI had one you could buy for $10 or so. Unfortunately they were made for the IBM/Intel style buss so AFAIK nobody adapted them for the 6502 series.

I don't think the ICD/MIO video ever got beyond the design/dream stage. That is no circuit board or drivers were ever done. Yes, there still are holes in the Atari memory map that you could hang just about anything on. The decoding is already on the 74LS138<?> for $D100, $D600 and $D700 pages. No a huge problem but the MIO takes $D100 page so any expansions have to be mapped outside that range.

I figure maybe another person would like to see this. It was a Xmas thing, I bought one for myself and one for my son. Didn't save a link to my perchase with dollar vs. euros but mine were $33 each for the 4 gig models. Shipping kind of stung as they didn't combine shipping. You get out the door for ~$50 each.
http://cgi.ebay.com/eBayISAPI.dll?ViewItem&item=250353314337

The bad news is my son bricked his trying to flash the OS and I did a ham fisted drop of ~4' with the recharger plugged in which snapped the connector. It is still OK since the thing recharges fine from the USB cable. At least until I drop it with the USB cable plugged in.<grin>

IMO: This thing is an incredible toy! Similar device description can be found at
http://gameking2.wikispaces.com/Internals

I was going to buy another USB flash drive but I started thinking my only complaint with my MP3/4 player was its tiny 1.8" screen. I saw this thing with its 2.8" screen and it seems huge in comparison.

Everything it says it does works. Apparently the ARM 32 bit processor they use in it is plenty fast to run a NES emulator. I've been playing Ultima III and Pools of Radiance on it and the emulation seems flawless. If you switch the mode from built in screen to composite video out there does seem to be just a bit of loss of clarity. The camera/DVR functions do not do well in low light and there is no built in flash.

It would be nice if they would port the Atari emulator to it for us. Controls would be a problem since they don't implement the USB master on the chip so no hooking up keyboards. I'm going to keep an eye on these guys just in case they enhance the thing in capability rather then just keep adding flash space. As it is now, it isn't an Atari but you can play the NES versions of games like Gyrus or Ultima on it.

IIRC, the Animation Station would work with most if not all of the Koala Pad
software.
I don't remember trying it with others, but I just about bet it would work.

Also, If I'm not mistaken, the Animation Station has a small switch that
allows it to work on
the Atari ST as well.

I'll have to pull it out of storage and check it out. The software is pretty
cool.

2746. XEP 80

Anyone know if the XEP 80 can be used with BBS software such as
BBS Express for 80 column plain text input and output of messages and
Text Menus?

I have all the hardware/software to startup a BBS using BBS Express which
I have some experience with.
For starting out, I'd like to set it up for just a personal data base so
that I can
call and transfer text info and maybe some files.

Was wondering if anyone tried using the XEP 80 with BBS Express or is it
just not worth it.

IIRC, the Animation Station would work with most if not all of the Koala Pad
software.
I don't remember trying it with others, but I just about bet it would work.

Also, If I'm not mistaken, the Animation Station has a small switch that
allows it to work on the Atari ST as well.

BS > Does it really work with the ST? Where is the switch at?

I'll have to pull it out of storage and check it out. The software is pretty
cool.

The drawing program "RAMbrandt" by Antic (1985) also allowed use of the
KoalaPad or Joystick along with input from the keyboard at the same time.

I am not sure if it would also function with the Atari Touch Tablet.

Been thinking about getting the my-ide cart, Used blackbox for years.
Iam wanting to go Flash cards only, no more big hookups.
I have read the forums at steve's and not found the questions I was
looking for so hopefully some of you has the info iam looking for.
1 compact flash to IDE which one, ebay has a bunch over 700
2 Use the Pin 20 power or external power on the card and which is best
for the computer
3 Is the voltage 5vdc from pin 20 ?
4 Can you use two (2) CF's at the same time IE: master/slave ?

Thanks for any info,
Mike

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Here is info that should be helpful to your questions about power:
http://www.atarimax.com/flashcart/forum/viewtopic.php?t=368
BTW, pin 20 cannot supply enough power for some devices -- results in erratic behavior or color changes on the screen. I normally use an external regulated +5VDC supply (or) +5VDC coming from the inside of the Atari.

As to type of CF adapter, I have yet to find the "perfect adapter". I don't like the ones that stick up 2-3" above the cart. Usually I end up with a 40 to 44 pin adapter, with a 44 pin to CF adapter plugged into that with a very short cable to connect the cart to the adapters, folding the cable so that the card is behind the cart.

The flash modules (like Transcend) are very nice, but have had "iffy" results with the MyIDE compatibility. If you buy the MyIDE cart + module from Atarimax, I presume that will guarantee compatibility assuming your Atari can supply the +5VDC (ask).

OTOH, have you considered using your BB with a compact flash card via a SCSI--IDE bridge (e.g. ACARD 7720U)? Of course, the BB is still pretty large, but this gets rid of drive/case, etc. And although the MYIDE is very nice, the BB is even nicer. I have used this combo for more than a year with good results.

BTW, have you considered the KMK-JZ IDE interface? Much smaller than a BB. Fastest interface available for the Atari, but (normally) only works with XE models. These are made in several variations by different Polish suppliers. I have this interface, and it is much more compatible with differing media than the MyIDE. I currently use it with a Transcend flash module, powered by two wires from the interface pcb. Be aware that for some of these modules, you must ASK for the cartridge jack to be included/attached (you lose your cart jack since it plugs into the XE ECI port).

Here is one source of the interface:
http://afs.atari.org/idea.htm

Read more about it here:
http://drac030.krap.pl/en-kmkjz-info.php

Good Luck!

I would recommend either of these options as well. I use my BB with the
Acard SCSI->IDE->CompactFlash solution, and it works great. I also use the
KMK type adapter with IDE->CF too, and it works great as well.

Any confirmation of the existence and function of a switch on the
Animation Station would be great.

If the switch allowed for "KoalaPad Mode" vs. "Atari Touch Tablet" mode
that would seem more plausible to me.

I'd really like to know what it does! Thanks.

Hey Mike,

The Animation Station does have a small slide switch on the lower right
corner.
According to the manual....It's called a Emulator Switch and when in the up
position the drawing pad is compatible with Design Lab (Stock Software) and
other graphics software. (probably just about any IMO)
When down the Tablet can be used for a game paddle or joystick emulator.

For those who have never used the software, There is Printer Support, and
FONTS believe it or not. You are able to load different character sets.

There is a form of Cut and Paste with Shapes. Which can be loaded and
saved to disks. There were suppose to be 3 Shape disks that you could
order. The Shapes are like Clip Art.

It's permoted as a Video Titler in the manual too. And goes into detail
on how to setup a VCR and etc.

The software reminds me of early Atari ST paint/drawing programs.
Neat stuff.
No wonder I want to Draw instead of signing my name at the Pharmacy. 8-)

Hey you have a modern day Atari user group! :) Congratulations.

I used to have an Atari user like 15 minutes away, and that was cool. These
days our Atari community is vast, but rather than being in one city, we span
the most remote parts of the globe.

Hey Phantomm, how is your quest to get BBS software working with the XEP80?
Well if you get the BBS running I'll make sure to call it.

As for everyone else here, good to see everyone! I'll try to hit this
newsgroup more this year. I kinda forgot about it, but then in a chat I
remembered this is how I started in Atari fandom, and it has generally been a
fun no hastle place.

So hellos to all!

Thanks, though I'm afraid I'm still curious about that switch..

I just found an online review from Sept. 7, 1986 by Art Canfil (posted by
me to the Cleveland Free-Net Atari SIG in 1992 - that was only 17 years
ago!) where Art said:

The AS pad also has a tiny switch at
the lower-right corner, which is
supposed to allow the pad to emulate
"paddle, keyboard, mouse or joystick
control" (according to the slickly-
printed box's claim). This comes
perilously close to being a damned lie:
the few games using paddles might be
played with the AS pad, I suppose,
though rather awkwardly. But special
software would have to be written for
the AS pad to function as "keyboard"
(huh?) or as a "joystick"! Certainly
the pad does <not> substitute for a
joystick in the existing programs I
tried. (As for it emulating a mouse, I
won't comment, having never had reason
to use a mouse with an 8-bit Atari.)
...
Flipping
the "emulator" switch back or forth
seems to have no effect. (As far as my
experiments have been able to
determine, the emulator switch does
nothing at all!)

Given that both the KoalaPad/Animation Station and the Atari Touch Tablet
are read by the computer as PADDLE values, my guess is that the switch

doesn't actually do anything when used with the Atari. Maybe it has an
effect when the AS is used with the Apple II or the C64?

2768. Crap, another musical controller idea :)

Newsgroup: comp.sys.atari.8bit
Date: 2009-01-24 23:03:19 UTC
From: bill@newbreedsoftware.com
Message-ID: <497b9e37$0$1606$742ec2ed@news.sonic.net>
Source record: 2607

I recently watched the movie "Scratch", about DJ'ing and turntablism.

And now I imagine a controller input similar to a pair of Indy 500 Driving
Controllers (rotary, so they can spin around and around, like a turn table).
Possibly motor driven, but allowing the user to turn them back and forth
manually, the way DJs scratch.

One POT (paddle) input could be used for the fader between the two tables.

Now, if one were super clever, and could convince the Atari to do it,
each rotary input would be tied to a digitized music sample.
The direction and speed the input devices spun would control the direction
and speed of its sample playbacks. The analog input would fade between.

If not samples, you could at least alter the playback speed and direction,
and tweak the pitch, of sounds coming out of the standard Atari voices.
That'd be a lot less CPU-intensive, since you wouldn't be mixing two
channels, or altering speeds/pitches. Though that HAS been done.
(Remember the Amiga MOD music player app on the Atari, from over a
decade ago?)

With a machine-language-driven rotary input reader (since BASIC is way too
slow to properly read Trakballs, mice or Indy 500 controllers), the latter
could be done in BASIC pretty trivially.

Load a pair of 'samples' (songs) into some memory banks (big DIM'd strings?)
and use the rotaty inputs to control how a pair of pointers/indexes into
them move around. Also use that to tweak the pitch as each note is being
played.

Then just use the POT input to control the volume of each voice.
If the slider is at the half-way point, each voice has a volume of about 8.
If it's on the far left, once voice gets 15, the other gets 0 (silence).

I could ALMOST see a game mechanic for this. I remember trying (and utterly
failing) to play some turntable-based game from ... Konami? ... in the arcade
at the Santa Cruz Beach Boardwalk a few years ago. Ah... Google tells me
it was "Beatmania", and it also included a mini keyboard:

http://en.wikipedia.org/wiki/Beatmania

error 144..

2772. Re: Atari Error 144

Newsgroup: comp.sys.atari.8bit
Date: 2009-01-25 05:45:43 UTC
From: RetroJess <rjhamilton@pldi.net>
Message-ID: <ttKdnWPz5tsXYebUnZ2dnUVZ_h2WnZ2d@posted.pioneerinternet2>
Source record: 2611

144 is an 'unable to complete operation requested' error; usually
a read or write to the disk. It can be as simple as a write protected
floppy or a bad sector or even a symptom of drive speed variations.
Some references also suggest scrambled directories, though I do not
think I have encountered that as the culprit. Old disks could suffer
from deterioration of the oxide media.

If it happens during format, it could be bad sectors and yes, it will be
dead unless you are a guru with a disk editor and the problem sector(s)
are not 1, 2, 3 or 360-368. Are these previously formatted disks? Are
you able to try the disk in a separate drive?
-Jess

What DOS?

That is a bit odd, because when the drive finds bad sectors at format time
you're supposed to get Error 173.

Could you be trying to format "high density" 1.44MB disks? You want to
stick to single or double density disks with the Atari drives.

? error 173? My references only go to 171 (point invalid). What DOS has
173, not Atari DOS or
SpartaDOS.
Error 144 is a common error, it means that the
sector couldn't be read, or written in the case
of a format. It occurs often in copy protected
disks if you try to copy one. Error 144 is common
in commercial copy protected disks, as the error
is on purpose and is expected for a complete load.
error 144 on a format means that a sector couldn't
be formatted is bad. It can also occur if the floppy
drive has problems, maybe a cleaning of the head
with Q-tip and 90% isopropyl alcohol would help.
I had two Indus drives that couldn't read/write above
about sector 700, and would get the error. It ususally
sounds like a 'TONK', other read errors can be a
'PFFFTTT'.

hello:

I am going to wear this one to death, seeing I am getting back to
atari's and my black box as well. I am re-doing some disks seeing I am
leary of how long the media will last. I have to save to the hard

drive and then hopefully I can get it off. I have plenty of space and
plenty of time to try.

Hello:

I have some disks that format and some do not, on a standard 1050 as
well as a Indus GT drive that formats the disks till they format threw
at least once. I check them and they come out fine. Bonus Disks are
one and I will have to reply later on others. I know the difference of
HD-disks and the regular ones, at one time I could even format the
other side without any problems. but now I can not.
jmore later,
JIM

Cool! Good luck!

I've still got old disks with crappy unfinished BASIC games I need to
finish backing up. Yknow, for posterity. Almost none of it is worth
redistributing.

Yeah, time for:

```
10 PRINT STICK(0);" ";STRIG(0);" ";PADDLE(0);" ";PADDLE(1)
20 GOTO 10
```

:)

BTW, I recently discovered how Atari Pro Controllers (for the 7800) do
two buttons in some games, but still one button in others. Looks like
the Atari Touch Tablet does something similar for its three buttons
(two on the tablet, one on the stylus). If you just read for a trigger,
all three work. But you can check some other values (stick direction bits?)
to tell which of the three is being used. Clever. :)

Before you catalog on a spreadsheet, what are some
of the ones you have like? Are they commercial
bootdisks, with a custom label? Are they load files
on a menu disk? Are they BASIC, OBJ, COM?
What are some of the names? Have you played any
and liked them? With good graphics, playability?
Come with documentation? Maybe we can save
you some time.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Hello:

Is there a age of a floppy disk ? Is there a failure issue after say
so many years or so many writes or reads? Why I ask is that I have
many disks that are ancient, and I am wondering if I should transfer
them to another disk that was formatted earlier? I have been
diskcom'ing some for that issue, so I have my favorite games and
utilities.

I've gone virtual. I still need to finish backing up my old floppies
(which means finding space and time to set up my 1050 drive and go through
the process), but these days I boot my Atari off of an SIO2SD full of ATR
disk images.

I would suggest not trying to transfer your disks over
to new ones, but rather transfer your disks to a PC
(or Mac). Use an APE or SIO2PC device for this.
You can diskcomm the disks, but that may fail if
there are error sectors encountered. Alternatively,
you could SUPERARC the files on the disk to
an ARC file, and transfer that to the PC. If there
are error sectors when ARCing, you would be able
to recover all the other files than the ones with
error sectors.

2788. XEGS Rom

A quick google results in possible RAM, ROM or Pokey failure. In my own experience I'd be checking the RAM. Also what can happen is either dry joints on the PCB or oxidisation in the socketed chips. Tho the XEGS is entirely surface mount from memory, so it will most likely not be a socket problem. Open it up and check anyway, its easy to do if there are any socketed chips. Just push them down a bit harder.

ROM MAY be socketed.

Mark

Thanks for the tips...had a look and its definitely not socketed. I
guess it might be easier to just acquire another XEGS, but I'd still
like to identify and try to fix this one, if just for the learning. I
did do a quick google search, but nothing really tells me which chip
represents the bad ROM. Does anyone know of a resource that will?

The single ROM chip should be Atari # C101687. Located next to the
cartridge slot, about in the middle of the board.

The two RAM chips are at the front left corner of the board.

This article might be handy for the illustration of the inside of the XEGS:

Hello:

I need to know if the APE goes both ways, I mean to have traffic both ways, I am not looking for a simple fix, but to give life to my old atari files as well as keep what I have. Now the million dollar question, how much for the APE infterface? Where to get one? and if there are others using it?

I've had the magnetic coating go south. I didn't really store them safely
and on more then a few the coating would just wipe off.

Yes, APE (Atari Peripheral Emulator) goes both ways. It makes whatever is hooked up to it look like a disk drive to your Atari. If you make the old serial version, it can be done with < $10 in parts from Radio Shack, if I remember correctly (it's probably been a decade since I built and used mine). There are more modern versions that are more expensive and will read from devices such as an SD card.

Take a look here:
http://www.atarimax.com/

The DOS 2.0S and DOS 2.5 manuals I have go up to 173.

Atari DOS II Reference Manual CO16347 REV.1 (1981), page 80, and
Atari DOS 2.5: XF551 Owner's Manual C033537-0B1 (1988, c1987) page 99 both
have:

ERROR NO. ERROR NAME CAUSE AND RECOVERY

172 Illegal Append You have tried to open a DOS I file for append
using DOS II. DOS II cannot append to DOS I
files. COPY the DOS I file to a DOS II diskette
using DOS II.

173 Bad Sectors at The disk drive has found bad sectors while
Format Time formatting a diskette. Use another diskette, as
you cannot format a diskette with bad sectors.
If
this error occurs with more than one diskette,
your disk drive may need repair.

(For Error 172, the DOS 2.5 manual replaces "DOS I" with "DOS 1", and
replaces "DOS II" with "DOS 2.5".)

Back on topic, a recurring Error 144 could mean the drive's rotation speed
is off. That isn't mentioned in the DOS 2.0S manual, but the DOS 2.5
manual adds, regarding the Error 144 Device Done Error: "This error is
also caused by trying to read an enhanced density diskette in an 810 drive
or by variations in drive motor speed. If you suspect motor speed, have
your drive checked."

So that's an idea.

Hello:

I need to know if the APE goes both ways, I mean to have traffic both
ways, I am not looking for a simple fix, but to give life to my old
atari files as well as keep what I have. Now the million dollar
question, how much for the APE infterface? Where to get one? and if
there are others using it?
JIM
" end quote

An APE interface is widely used. So is the SIO2PC
homemade interface. It uses a single chip, and a diode,
it works pretty good. The APE software comes in
DOS and Windows versions. I don't remember how
much it sells for. You can get it free, but I think it
doesn't work PC to Atari, just the other direction for
the free ones. You can check ebaY for the APE interface, it comes in serial
and USB versions, about
$50 if I recall. The APE/PRO interface is nice,
you can get it at www.atarimax.com. There are
a number of interfaces to hook a IDE hard drive
to the Atari, but that isn't getting your collection

over to the PC, myIDE is also available at atarimax.
Seems like the chip for the homemade interface,
a serial port one, is a 1682C, Rick will correct me.

The most popular chips were 14C89, 1489, 75189, 75C189. All functionally the
same chip in CMOS or silicon. IMHO the CMOS versions are probably the way to
go. I did plug a standard 1489 into the APE/1050 interface and it worked
fine but the voltage levels were much lower with the added drain.

Rick

Source record: 2640

After realizing that my XEGS rom needs replacing, I've decided to cannibalize the unit and build an Atari 8Bit Tower out of it. I've done some initial research and thinking and I thought it'd be fun to gather this groups input before I actually started....Once I get going I'll post a blogger URL so I can upload photos and take comments and everyone can see how it's going.

As far as what I'm thinking so far...I'd like as much compatability with stock 8 bits as possible, but I'm willing to install some performance upgrades as long as they don't alter that too much. I think I'd like to build a tower with a Hard Drive, a CD ROM, at least one 5 1/4 drive, detached keyboard, the cartridge port should remain accessible as should the joystick ports, I'd like to run the whole thing off the tower's power supply. It should be a fun tower too, with see thru side and maybe some flourescent lighting.... I have a Samsung 15 Inch LCD already for the display that will take S-Video input. I'd like to run Spartados X most of the time....

Here are my first thoughts....Use the XEGS because of the detachable keyboard, some rewiring will have to be done to move the cartridge port, and the console system buttons. They keyboard also needs a longer extension and I've been scouring the net looking for Atari 5200 Joystick exstention cables...but no luck yet. I'm thinking of the AtariFlash, MyIDE internal interface for the Hard Drive, but I've absolutely zero experience with this product and I do not know how well it works with Doses and other things in the SIO chain...so this is where I'm looking for feedback first....

Also out of curiosity, anybody tried this before? (I've found one small posting on Atariage, but it was far from complete).

2802. Kuulostaako jotenkin tutulta?

On ollut naurussa pitelemist� kun on kuulustellut miten SUPO on huolissaan siit� miten kirjoitukseni vaikuttaa t��ll� olevaan "nuorisoon?" Ja sitten selitell��n miten ik��nkuin huolestuneita ollaan heill� siit�, miten kirjoitukseni saa massat rynt��m��n ydinvoiman PUOLELLE!

��.. noin jahas ja onko SUPO:sta siten paha, jos kansa kannattaa ydinvoimaa!??

Onko sitten MY�S mun kannalta 100% uskoittavaa, ett� nimenomaan ydininsin��rien huoli olisi aiheessa AITOA??

Niin oikke juu. Kyll� tuossa yht�l�iss� m�tt�� niin jok ikinen yksityiskohta alusta loppuun asti, ettei noita nauramati luve kukaaN! Kaiken muun syyt�harhansa lis�ksi luuleeko ydininsin��ri, ett� �lyllisen nuoren p��h�n voi noin vaan kirjoittaa aivoituksia, kuin vieraskirjaan? Kyll� nyt SUPO:n porukoiden "pit�isi tajuta ihmispsykologiasta" jotain! Kun nuori aloittelee ammatin valintaa h�n kyselee sit� tietysti ydininsin��ri-is�lt��n. Saaden vaan :"Juu on siel� ihan kivaa ja rahaa saa, �l� kysy, kun kielsiv�t puhumasta asiasta firman ulkopuolella mit��n!" Nuori sanoo harmistuneena tutkivansa sitten itse netist�.

Ja kas kummaa ydinalasta ei aukee sivua paria mainosta enemp��! Ja nuoreen iskee syv�, h�mm�stynyt ep�ilys. Pari nettihitti� Ronneburg, Wismunt, Majakin ydinr�j�hdys ja p��lle ehk� materiaalia Harrisburgista. Ainoat jotka aiheesta osaa kirjoitella on, kas kummaa mun 72 raporttia, jossa kerrotaan rehdisti tuhansista s�teilyyn kuolleista suorasukaisen dogumentoivasti. Ja se yksi pakolinen SUPO:n materiaali joka kertoo kuin insin��ri-is�kloonaus, ett� ydinonnettumuus on :"Hauskinta mit� voi housut jalassa el�m�lt��n toivoa!(Nuori kiikuttaa is�lleen pari kopiota jutuistani ja ilmeisest� ristiriidasta ns. "julkisuuskamaan ja is�insu raivostuu, ett� kuka t�llaista paskaa edes kehtaa! Teini sanoo, ettei tii� kun netiss�.. .Siit� paikasta is� kuin myrkyn merkki ja kielt�� koko netteilyn sein��n viikorahakielloin! .. ..

Siltappaa juu ja kaverit kertoo koulussa 4,5 miljoonasta l�yt�mist��n Tsernon uhrista ja Vartiaisen 7.3 milj/v ydinkuolemasta ja lukuisista muista esiin kaivamistaan jutuistani. No mit�s luulisitte, kun hiiltynyt is� kysele toivojensa intoa parin vuoden p��st� ydint�ihin, jossa rahaa tulee kuin sontaa ja s�teily on ihan JesH!? No hei t��ll� niit� "isi�" oli jo ilahduttavan pian ensiraporttieni j�lkeen ruikuttamassa nuortensa ydinkammoa. .�� noin mist�s syyst�? Ja ennen kaikkea kiikuttaako t�m�n kaiken kokenut is� totuuden t�st� mulle torvet soiden?!))

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!

No, you cannot play M.U.L.E. with a paddle, but you can play with at
least one joystick and up to three paddles (thus, it can be played with
three players on any XL/XE despite the lack of joystick ports 3 and 4
using one pair of paddles in port 2).

The paddles are only used in the land grant/auction phases (where you
directly act against the other players), the joystick has to be passed
around for the outfitting/installing/Wampus hunting phases (where you
play against time).

Thorsten

2808. US Gold Disk Release Help / WTB: Strip Poker

Newsgroup: comp.sys.atari.8bit
Date: 2009-02-02 20:40:30 UTC

Message-ID: <1233607232.17755.0@proxy00.news.clara.net>
Source record: 2647

Hi,
Does anyone have a complete list of games that US Gold released on disk for the 8-Bit back in the 80's?
I have collected quite a few over the last couple of years from eBay etc. and I am not sure what I still need to get (I am mainly interested in the games released in the plastic wallet type packaging).
Does anyone know if Bounty Bob Strikes Back ever came out in disk format from US Gold, on either Atari or C64?

One title I know was released, but have had trouble tracking down is Strip Poker, if anyone has one they would sell, please let me know!

All help appreciated!
Cheers,
Paul

Ah, that makes sense, thanks! If my USB joysticks don't arrive soon, I
may have to pull out an actual Atari system, and I'll give the paddles a
try.

By the way, has anyone ever been able to catch the Wampus? I've tried
but never been successful.

The only Group Code Recording (GCR) use you'll find is the Apple II,
various Commodore disk subsystems and the Amiga supported to to read
other disks but did not use it for it's native storage.

Pretty much every thing else is MFM or a derivative.

It is whatever Iomega chose it to be, probably neither of the above. It is rather irrelevant, you cannot access the drive at this level anyhow, it either talks SCSI or ATA commands.

So long,
Thomas

I am thinking of putting some 8-bit stuff on it as well.

Still working on it...

Hello,
In the past I had a Atari 800XL and I could make programs for it, and
now I will try it again in Linux with the atari++ emulator.
Starting it up gives a Atari window with a cursor after D:
Please, how can I get the screen with a cursor for writing a program?
Many thanks in advance for helping,
Gaston.

Question is how I can get the screen with READY with a cursor?

I'm not familiar with Atari++ but in Atari800, you need to tell the
emulator to NOT disable BASIC when you boot up. ([F1] key brings up the
settings menu.)

Note that if you want to load/save your BASIC program, you'll need to
boot into a disk image with a DOS on it, but since you seem to be getting
a "D:" prompt, it sounds like you might already be doing that part of
the process. (SpartaDOS? I normally use MyDOS, which presents a menu
interface. [L]oad object, [A] Disk directory, [C]opy file(s), etc.)

I'm not familiar with Atari++, but I downloaded it
and ran for Windows 32. Hit F1 to get a big menu.
I added the BASIC ROM in the BASIC menu and
it didn't seem to work. What I did to get BASIC
was load a disk image menu item, MyDOS .ATR
image with a binary load BASIC on the .ATR.
I loaded the BASIC I preferred (BASICB.OBJ)
and it worked.
I'll e-mail you the .ATR

2818. Re: atari++

Source record: 2507

Hmmm.....
You hit F1 to enter the menus.
Then you hit the Disk Drives to select the .ATR you want.
Then you hit 'PREFS' to select cold start. then
X out of the menu and do a cold start.
That should get you the MyDOS DUP.SYS (menu).
Then hit 'L' for load. Then BASICB.OBJ for BASICB.
Then you get the READY prompt.

2819. Re: Atari 8Bit Tower

I did this a long time ago with a 600XL, Transkey, and an XF551 motherboard.
The hardest part was extending the cartridge socket. I used an IDC 34 pin
edge connector and the plastic off of the 600XL. Worked good!

One thing I have noticed is that the newer PCs have lots more room in them
than the old clunker I used.

Also, the BASIC.ROM on the .ATR is BASIC C.
You can load it by: F1 menu, BASIC, select the
ROM file, menu, PREFS, cold start should give
you READY.
I prefer the B version, I can send you that ROM.
Thor doesn't want to violate BASIC copyright.
I think maybe you have the BASIC in an 8-bit
somewhere.

You also need to tell the emulator to use it. For that,
check the "UseBasic" button in the menu, and also unselect the
"HoldOption" item in the "Keyboard" menu.

So long,
Thomas

2822. Re: Iomega Zip drive MFM or GCR?

Newsgroup: comp.sys.atari.8bit

It is probably an RLL scheme. MFM is for FAT/FAT12 disks. 5.25" & 3.5" floppy disks and very early hard drives. New hard drives uses an RLL scheme. If anything, for legacy sake, this would be an MFM/RLL style scheme versus a GCR/RLL scheme.

FAT was built around and on top of MFM coding so it is probably founded on this scheme for later FAT file systems for ease of software and hardware mechanics. If you take a look at Iomega SuperDisk project, it alludes to MFM and MFM/RLL encoding scehemes versus GCR because it doesn't read older GCR disks but MFM disks. So, this is probably the case.

GCR was Commodore, Apple II, and few IBM based systems:

Another additional thing is PRML or extended PRML (EPRML).
The zip disk would resemble a hard drive more then a floppy disk in the
encoding scheme.

Hello Russg and Thomas,

First of all thanks you very much for the helping answers.
From now I come to the READY screen, where I can write and run something.
I also found my old Atari Magazines from SAG and ABBUC, so I can make
some exercises to become again familiar with Atari Basic programming.

Kind regards,
Gaston.

Hey guys,

I live in San Jose, CA, and thought I'd offer this stuff up here in
case theres someone local who is interested. It'll get dumped on ebay
if not.

http://www.atari8.com/ebay/

If you are local, and make a decent offer, I'll even deliver it. It
goes on ebay tomorow (Jan 6 2009) - we are moving next week, so I'm
unloading a lot of my stuff to set an example for the kids.

Note: there is also some Sega stuff in there, and also a manual and
boot disks/system disks for the ATR8000.

Feel free to email me with questions. rcollet ()at() gmail ()dot() com
I'd really like to have one person take the whole shabang - as I said,
I'm moving and my time is very limited right now.

Thanks!

Hi Rick.

Would you ship to Germany. I made a quick look at the stuff (when I
return home, I will look in detail) and I would be interested in
Phantasie and the Atari 800 (if it's not only the package ;-)

Bye Jochen

> GCR/RLL scheme.

Only older hard disks with the ST-506 interface used RLL and MFM.

Modern hard disks use something different. Anything made between the ST-506 era and roughly 2006 uses parallel recording of course, but not the RLL/MFM schemes. What exactly is used probably depends on the manufacturer. From 2006 onwards, drives are starting to appear that use perpendicular recording, where the magnetic particles are oriented vertically with respect to the media.

On top of the recording scheme are something called PRML (which helps make sure reads are consistent despite noisy media), and Reed-Solomon error correction (same scheme as used on CD and DVD media).

On top of that is the interface layer, the bit we all know as IDE, SATA, or SCSI. The controller in the computer has no idea at all about the recording scheme.

> FAT was built around and on top of MFM coding ...

It might have been designed with floppy disks in mind, but FAT is a filesystem layer, independent of the underlying recording scheme. These days, it is most commonly found on memory cards, thumbdrives, mp3 players, and so on.

FAT is used so commonly because practically everything made in the last 20 years or so can read it. Other filesystems can theoretically be used as well, as long as the disk is low-level formatted properly and the filesystem's metadata will actually fit into the 1.4 MB space available.

> If you take a look at Iomega SuperDisk project,

SuperDisk was a 3M/Imation technology, not Iomega. That aside...

> it alludes to MFM and MFM/RLL encoding scehemes versus GCR because it
> doesn't read older GCR disks but MFM disks. So, this is probably the case.

You're talking about the floppy disk read capability. The Imation SuperDisk project is a variation on the older Floptical technology, which used RLL for the recording scheme, with a laser to guide the head from track to track.

As Iomega disks are entirely magnetic, RLL probably also forms the basis of the recording scheme, but it likely differs enough from the sort used on floppy disks that it can no longer be called "RLL".

> GCR was Commodore, Apple II, and few IBM based systems:
> http://en.wikipedia.org/wiki/Group_Code_Recording

According to the above link, GCR can be used on top of RLL, which does make sense. Remember that RLL and MFM are the low-level recording schemes, while GCR is really more of an encoding scheme, which is why we have raw GCR-encoded 1541 disk images out there (.G64), in addition to the usual unecoded version (.D64).

As to the ZIP drive, I would have to agree with Thomas - the low-level recording scheme could be just about anything, since it is abstracted away by the interface.

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I'm more familiar with Atari++ now.
It has the source code, 350+ files in 3.5 megabytes
of code.
I've often wondered what is involved in writing one
of the emulators, and this is the first source code
I've even briefly looked at.
This is a monumental undertaking, congratulations and
thank you, Thomas.

Note that I believe atari++ was originally based upon the
open source (GPL'd) Atari800 codebase, which is a bit older.
I'm sure Thomas has rewritten the heck out of atari++ in
the meantime, though.

And then there's MESS, which I've never used, but also
apparently does 800 & 5200 emulation. And MAME. :) Yikes.

Announcing Atari Party 2009!

I'll be assembling a varierty of Atari game systems and computers,
and nearly 200 games, for all to come and play. At the Yolo County Public
Library, Davis Branch, in the Blanchard Room. 6pm-9pm on Saturday, March 28th

Free and open to the public, but space will be limited. Donations welcome to
help pay for the facilities and any pizza we might order during the event.

For more, see: http://www.newbreedsoftware.com/atariparty/

>JIM

Not sure really. Ihave many 8-bit games on disk and about 90% of them work
just as good as they did when I originally bought them. Some do not, but then
I have run into the same situations before when I had disk loading problems.
AS far as putting on a different disk, it could not hurt. I strongly believe
in backups.

As far as 8-bit is concerned, tons!!!!!!!. I too have some old titles. In the
80's, I would buy 5-10 titles a month and I did that for 5 years in a row.
There are enough 8-bit titles to keep us all happy for years to come.

We might guess RLL. I found a paper from Quantum
(http://www.forensicswiki.org/images/c/c6/Maxtor_PRML_Read_Channels.pdf)
where they say they first put PRML in their Empire drives in 1993.
Maybe IBM did it already in 1992 when they came out with the first
3.5" 1 GB drive
(http://www-03.ibm.com/ibm/history/exhibits/storage/storage_chrono20.html).

The Empire models were apparently 540 MB - 2 GB in size. The 540 model
had four heads so presumably 270 MB per platter, almost three times
the capacity of Zip media which came out in 1994. So one might think
Zips used old encoding since they weren't exactly top of the line in
storage density back then.

Well, it looks like Gibson Research confirms it, RLL was used, at
http://www.grc.com/tip/codknowledge.htm which is about the click of
death.

Yes, personally, I am quite good at it. I approach the mountain where he shows up from the side, adjust my vertical position and wait for the little dot to shine up. Just make sure you are not too close beforehand, then he'll certainly jump to another mountain.

Thorsten

2843. xa 2.3.5

Newsgroup: comp.sys.atari.8bit
Date: 2009-02-08 07:20:01 UTC
From: Cameron Kaiser <ckaiser@floodgap.com>
Message-ID: <498e8729$0$193$bb4e3ad8@newscene.com>
Source record: 2532
Cross-posted to: comp.sys.apple2,comp.sys.cbm,comp.sys.atari.8bit

The xa 6502 cross-assembler package has been updated to version 2.3.5. This version fixes a bug with the .bin pseudo-op and character sets, adds PETSCREEN and HIGH character sets, adds the .aasc pseudo-op, and has multiple small custodial and bug fixes. It will compile on most systems with an ANSI C compiler, can generate code for all NMOS and most CMOS variants of the 6502 and the 65816, and is known to work on Win32, most Un*ces and Mac OS X. It is licensed under GPL.

I'd be damn, my guess prior was RLL but I left open for newer schemes that
may exists in the 250 MBytes Zip disks versus the 100 MB.

Got a good point.

The arcade Gyruss was actually a rotary controller with a joystick
on it instead of a paddle. Once you play the arcade version the 8-bit
version is harder to control.

Huh, I did not remember that. But found a shapsnot via images.google.com
that seems to confirm. Looks like a joystick with a spherical bulb at
the top, but the diagram below it has a curved, double-pointed arrow.

Although, it can also imagine the stick being just left/right (and the
curve is shown to denote the fact that the ship spins around the screen.)

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

It's been quite some time since I've been here. Had to check to see if anybody (from back-in-the-day) was still here.

Sold off most of my remaining 8bit equipment about a year ago, but kept enough to remain functional.

My 10 year old son found a box that's been taped up since 1982 and was amazed at what I did back
then with an 8bit Atari. I had some old Dungeons & Dragons print-out (character sheets) that
were made with my Atari and a printer connected to a printer interface.

Wow!

Hi, James. I remember you. We exchanged adapters
for 130XE to MIO/Black Box, and did some other
trades.
You ever hear from Bob Klass?
I still use the Atari, but mostly Atari800winplus 3.1.

Or watch it on your computer. VGA doesn't care about PAL and NTSC. I
have watched numerous MPEGs sourced from the Beeb on my computer in the
Midwest. I tried a PAL DVD last summer and it played flawlessly.

I used to have an Apex region free DVD player, it played PAL DVDs just
fine on my NTSC-only TV set.

Most UK DVD players will play NTSC fine. What they output depends though, could be NTSC, could be psuedo-PAL so it's down to whatever your TV can handle but again, most UK ones should be fine as they are nearly all multi standard.

I had a request from someone for a certain game, and went to the /
newstuff page and its last update was from 2005. Business must be
booming to miss an update like that one.

Don't mean to lurk. I do have a neat story. I bought a common lot of
Genesis games, and the store sticker was from a store, now closed, in
Dhahran, Saudi Arabia. I had been stationed there in 97 and to see
these labels from before the Gulf War was a real trip. The previous
owner's father was an employee over there and hosted soldiers to give
them a break. He has a bathroom door that he had all the guys sign,
and on it Tim McVeigh signed. All I could say was wow.

Had to share, back to lurking.

Nathan

Not surprised, since his ad campaign seems to be solely dependent on
spamming newsgroups, and anyone of regularity around here knows how to
use filters. I haven't seen an ad of his in over a year and a half.

2871. Wanted: M.U.L.E. for my Atari Party

Newsgroup: comp.sys.atari.8bit
Date: 2009-02-24 10:25:55 UTC
From: bill@newbreedsoftware.com
Message-ID: <49a3cb33$0$1636$742ec2ed@news.sonic.net>
Source record: 2460

I'm putting together a big Atari Party in Davis, Calif. next month
(http://www.newbreedsoftware.com/atariparty/).

Bob Wooley is hopefully coming, and can hopefully supply an Atari 800
for some M.U.L.E. and Dandy fun. I'll be booting off of an SIO2SD,
and it's trivial to find a bootleg copy of M.U.L.E., but obviously I'd
like to be as legit as possible.

I was hoping B&C had a copy of M.U.L.E., but I don't see it in their
listings online. (I've asked, to double-check.) I also found nothing but
Nintendo NES cartrridges on ebay.

Does anyone have a copy they'd be willing to sell (or donate!?!?!) so I can
keep everything 'above board' here at my event?

Thanks,

Been awhile since I've went thru my 8-bit game software, but I may have
this,
What does, M.U.L.E. stand for or is it the actual name of the game, and what
company/name made the game and about what year?

A brief description of the game would also be helpful.

When's the event? I have the original boxed set that I could lend, but I'd have to mail it from Utah.

March 28th. I just want to have a copy around so I'm 'legit'. :)
So borrowing should be fine. (Though I'd love to have my own copy, just to have!)

M.U.L.E. stands for "Multiple Use Labor Element" (Wikipedia tells me :)),
but the name of the game is simply "M.U.L.E." It was published by
Electronic Arts (developed by Ozark Software).

The Wikipedia entry for it has a picture of the box (disk sleeve) art:

http://en.wikipedia.org/wiki/M.U.L.E.

Thx!

2881. XEGS problem

Newsgroup: comp.sys.atari.8bit
Date: 2009-02-27 00:48:56 UTC
From: Conrad <conrad.russo@gmail.com>
Message-ID: <4f3444cd-bde6-4fd6-a1b1-797f76a4f9dc@v13g2000pro.googlegroups.com>
Source record: 2470

Hi, I have a problem with my XE game system. Maybe one of you can tell me what the matter is. Sometimes when I power on my XEGS, it will just not work, e.g: will go to a blank blue screen with a buzzing noise and a cursor, sometimes a red screen with a cursor, sometimnes just a blank blue screen. When it boots to these screens, it will be unresponsive most of the time, however sometimes when I get the blue screen with a buzzing noise, basic will boot after ~3-5 seconds, and everything will work as normal. All I have to do to fix it is hit restart and it will boot to basic or to cartridge like normal. Rarely I will have to hit restart more then once, but it will always eventually work. Also, holding select while booting is supposed to bring me to missile command, but many times it will just boot to basic as if I just booted normally. I'm willing to live with it if it's unfixable, I'm just hoping it won't effect the operation of any of the new hardware I ordered. I ordered an SIO-2-PC USB edition, and an internal MyIDE. Any ideas or comments?

The "buzzing + cursor" is the OS looking for a floppy disk drive,
and not finding one. If you don't want to wait the 3-5 seconds,
hit [Break] key a few times to hurry it along.

As for the unusable red/blue screens, not sure what's up there.
Might be a ROM or RAM chip failure. Others here on c.s.a.8 would
probably be better able to help.

Good luck!

Thanks for the help Bill, I guess it's less fubar then I thought
before. Can't wait for my SIO-2-PC and my MyIDE. Still looking for
any ideas as to why it intermittently if any one else has any ideas.
If it is a rom/ram chip failure, will any of the interfaces I
purchased be effected by that to the point where I will not be able to
use them. Also, how can I identify the problem

Archive-name: atari-8-bit/welcome
Posting-Frequency: 10 days
Last-modified: July 20, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I don't know why, but I suspect your ROM chip.
Rick Cortese is a hardware person.
What was neat about the 800 and some 800XL is
that the chips are socketed. In that case you can swap
out known good chips and try find the bad one.
Of course, it means you'd have to have a working,
socketed mate to your original.
Since it is intermittent, it may be the power supply,
it having to come up to level, that is something you
could try if you have a spare. So, buy a 800XL.

I did the self test and it passed every test with flying colors.
Also, I think the problem was the mainboard touching the RF shielding,
because I opened it to look for obvious damage and found 2 of the pegs
that keep the mainboard from touching the shielding broken off. I
superglued them back in place, and now it seems to work beautifully.
Thanks for all your help guys.

Heh yeah, well anyway, it's 9 paletted colors per scanline, assuming
you don't tweak the palette mid-scanline. (Tricky, but certainly
possible... see, for example, demos that throw 8 player/missiles
across the screen.) :)

---------- Forwarded message ----------
Date: 24 Feb 2009 10:25:55 GMT
From: Bill Kendrick <bill@newbreedsoftware.com>
Newsgroups: comp.sys.atari.8bit
Subject: Wanted: M.U.L.E. for my Atari Party

I'm putting together a big Atari Party in Davis, Calif. next month
(http://www.newbreedsoftware.com/atariparty/).

Bob Wooley is hopefully coming, and can hopefully supply an Atari 800
for some M.U.L.E. and Dandy fun. I'll be booting off of an SIO2SD,
and it's trivial to find a bootleg copy of M.U.L.E., but obviously I'd
like to be as legit as possible.

I was hoping B&C had a copy of M.U.L.E., but I don't see it in their
listings online. (I've asked, to double-check.) I also found nothing but
Nintendo NES cartrridges on ebay.

Does anyone have a copy they'd be willing to sell (or donate!?!?!) so I can
keep everything 'above board' here at my event?

Thanks,

So does a manual and/or box now constitute ownership? ;)

If I don't have a manual or box for my Chase the Chuckwagon cart, does
that mean I don't have any rights to it? :)

- Trevor

Oh yes. My sons play it on the PC and loved it. Would be really to have it for
the Atari 8-bit. Is it going to be on a CD or regular Atari discs? Yes, Keep
us posted...

Sounds like you are interested in just to use the C64 as a game machine. I bought a C64 and quickly sold it. I like the 800 MUCH better. If you really want to get to it, take each computer a part and look at them. The 800 looks like it should, a computer whereas the C64 look like a hack. Most computer experts agree. I just wish I had saved all those quotes...

From: Conrad <conrad.russo@gmail.com>
Message-ID: <7b0b7bf9-d197-4140-aed9-910218da6ab2@h20g2000yqn.googlegroups.com>
Source record: 2493

Hi everyone, I'm looking for a little help here. I'm looking for any information available on getting RGB video from an XEGS or 8 bit Ataris in general. I plan on doing a small run of boards combining a 1 MB SIMM expansion I have been working on with S-Video and RGB outputs (possibly Y-Pb-Pr as well if I can figure that one out). Any info anyone has that could be helpful would be appreciated. Thanks alot. Conrad.

2905. Re: [Local] Atari Party, Davis CA, March 28th, 2009

We're on a roll with planning for Atari Party 2009 here in Davis!

http://www.newbreedsoftware.com/atariparty/

We've got a 2600, 7800, 800, 800XL, Jaguar, 3 Lynxes and a 520ST
(as well as an Atari Flashback II and TV Paddle Games), which will all be
running simultaneously!

Expect to see Tempest 2000 and Star Raiders up on a video projector. :)

We'll also have some educational displays (specs on the systems,
"how do sprites work?", etc.), as well as some guest speakers!

* Paul Cubbage, manager of Atari Program Exchange back in 1982-1984, will be
doing a short presentation on APX and Atari (before 'the fall').

* Lx Rudis, creator of music on countless Atari Lynx titles, will talk about
his work on Lynx games. (Still waiting to confirm whether he can make it)

* Yours truly, creator of the homebrew Atari XL game "Gem Drop", will talk
about "Super IRG" graphics mode used in the game, and other software-driven
graphics modes.

I'm also happy to welcome other speakers, so if you want to come talk
for a few minutes at this event (or know someone who might be able
to make it), please let me know!

This event is free and open to the public. Children are welcome
(but please keep an eye on them!)

When:
Saturday, March 28th, 2009
6pm to 9pm

Where:
Davis Public Library
315 East 14th St
Davis, California USA 95616

2906. Issue # 57 of the Retrogaming Times Monthly, is now online

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-08 09:31:38 UTC
From: Bryan Roppolo Boulder <brop99@hotmail.com>
Message-ID: <0d0a114f-a53d-4b4c-9a34-769c3b4ffd8d@w9g2000yqa.googlegroups.com>
Source record: 2495

I'm posting this on behalf of Alan Hewston, who is the webmaster for
Retrogaming Times Monthly, the classic on-line video gaming magazine.
BTW, if anyone is interested in writing for the magazine, send me an
e-
mail at bro...@hotmail.com and I'll get you signed up. You wouldn't
have to contribute something every month, just something every now
and
then when you feel like it. Thought I would extend the offer to the
group to see if anyone was interested.

Sorry, after only one issue, we've had another change in our editor,
and
I had web site problem and then some error to read/post on the
newsgroups , whihc finally went away. Anyhow, assuming this actually
posts, we're finally up.

We hope to get the March issue out when it is actually March.

Highlights from our February 2009 issue include:
NES'cade - Excitebike
RTM Idiocy - part 2
Apple][Incider - Stargate
The Thrill Of Defeat - Zaxxon In 1K? Oh My!
Old Wine New Bottles - Atari Anthology
Videological Dig

You can find all these inside the Retrogaming Times Monthly!
137 months in a row - the longest-running online free retro-gaming
newsletter ever!

http://my.stratos.net/~hewston95/RTM/RTM_Home.htm

2907. Atari 800XL in computer orchestra

Saw this whiz by via Slashdot:

http://www.bit-tech.net/news/hardware/2009/03/06/bletchley-park-retro-computer-orchestra/1

"The shrill bleeps from 80s home computers and the hammering clicks
of ancient calculating machines are noises that many people would
prefer to forget, but not chip-tune musician Matthew Applegate. He
plans on assembling a virtual orchestra of 20 retired relics of
computing at the National Museum of Computing at Bletchley Park.

"The choice of venue will even allow Applegate to feature the
infamous Colossus Mark 2 computer in the event, which was used for
code-breaking in World War II..."

Enjoy!

Posting-Frequency: 10 days
Last-modified: July 20, 2008

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

2910. ATR File Manager for DOS

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-11 02:00:42 UTC
From: Jack Tseng <tseng4@hotmail.com>
Message-ID: <eXEtl.50106$FI5.46032@newsfe07.iad>
Source record: 2499

I am looking for ATR file manager for DOS.... The program extracts the file from/to the ATR image file. Any idea?

Thanks!
Jack

2911. New To Emulation. Please Help

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-11 04:45:20 UTC
From: androidlove <gentle.dissident@gmail.com>
Message-ID: <0b5d8dfb-4b57-4995-b305-8ca5f61c699c@r16g2000vbp.googlegroups.com>
Source record: 2500

Hello,

When I turned 16, my dad offered me a car or a computer. I chose an Atari 1200XL with floppy drive. It recently occurred to me an Atari computer might be emulated. I've found a few 800XL emulators, but I'm having no luck with disk images. The help I'm finding tells me very little and assumes I'm familiar with emulators. I'm running XP. I'd like to be able to save my BASIC programs and load example programs. I've found some I'd like to look at with the extension .BAS. Please, could someone tell me which emulator I should use and point me to a step by step for saving and loading?

I have read thorough the emulator FAQ in this group and am still lost.

Thank you.

Michael Henkell

Try this one. Read the help files for usage.
Atari800 plus 4.0.exe Installer
http://a800win.atari-area.prv.pl/

Take also the xf25.zip if you can't find your original OS. Or can't dump
the basic rom.
Also inside is an ATR file for booting to dos.

READ the HELP files.

What most people are doing about monitors if they use anything other then a TV or composite monitor is use some kind of conversion dongle that lets you use a VGA monitor. The problem for us has been the horizontal scan rate which is double what the Atari can handle for most RGB monitors.

If you can find an old monitor that can sync down to Atari levels ~NEC Multisync or Atari ST color monitor maybe, it is still problematic in that you don't have the right signals to work with. Foggy memory but I think the GTIA output 4 bits of lum to a 4049 or 4050 that does the summing. Hard to explain but the data comes out in two pieces. That is, the RED doesn't have a RED level but it is added on the fly by the GTIA from the summing circuitry. One lum output for all colors. Anyway, see if you can spot an 800XL schematic on the web and you can see what I mean.

There is a Trident single<?> chip solution. Can't remember the name, something like Trivideo 5600. Takes composite, S-Video and converts it.

Rick

I use imageman.exe, it works on DOS 2/2.5/MyDOS
single density ATRs.
There's also Schreur's xdir, that will work on
SpartaFTe images also. I haven't used it much,
it extracts files from images, and probably you
can add files as well, don't know.
Once you prepare your imageman compatible
atr, you can further manipulate it in an emulator.

Thank you for your reply. That's the emulator that locked up on me, so
i gave up on it. I'll look at it again.

2918. New forum: Retro-link.com

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-12 05:01:32 UTC
From: rbernardo@iglou.com
Message-ID: <cd944857-f987-40e7-bf73-6fdedd4792c4@v19g2000yqn.googlegroups.com>
Source record: 2357

Paul Quirk has created a new web forum for users of
classic computers. Go to http://retro-link.com to see the
opening message or to http://retro-link.com/smf/ to browse.
To sign up, send an e-mail to paul(at)retro-link.com

According to Paul, Retro-link.com will be different. This is
what he says --

"There will be a new site for enthusiasts of retro computers...
It will include other retro computer systems, as demand
warrants. That site will be called retro-link. The domain,
which has been registered, is at retro-link.com. I intend to
have it ready and open to the public this weekend.

The theme will be a mature, friendly, harassment-free
place where people can contribute as much or as little
as they wish. It will be a positive place where people can
post questions that have been asked a hundred times
without being insulted for doing so. It will be less of a
repository of information, and more of a social place to
gather and discuss...

The forum seems to be all-encompassing in its eight
categories -- General, 8-bit Commodores, Amiga, Atari,
Apple, Tandy/TRS-80, Vintage PC, and Others.

Truly,
Robert Bernardo
Fresno Commodore User Group

Is that the one that comes in the form of a Total Commander plug-in? If so,
it's the slickest thing since sliced bread.

Could someone give me a direct link to the program? I don't see where
the page is available in English, and the babel fish doesn't seem to
understand Polish any better than I do.

Thanks,
Trevor

2925. HIP, RIP and TIP

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-13 20:25:44 UTC
From: bill@newbreedsoftware.com
Message-ID: <49bac148$0$1581$742ec2ed@news.sonic.net>
Source record: 2364

Does anyone have a good layman's explanation of how HIP, TIP and RIP work?
(I understand APAC and ColorView, and kind of understand HIP... it's 80x192 16 grey and 80x192 9 palette, and that somehow causes the pixels to shift 1/2... interlace that and you can, kinda, get 160x192 with 30 shades.)

What do TIP and RIP do?

(Am I hallucinating? There IS something called TIP, right? :))

I confused makeATR with something else. I don't recall where I picked it up, but the Total Commander plug-in came in an archive named 'atrwcx_1.6.zip'. It lets you browse the contents of an ATR image from a Norton Commander-like point and shoot file browser.

Yes That is a great plug-in. I have Total Commander also. Works great for
dumping atr's to a different directory, even large atr (16mg). I started
using TC when I got pissed at the new explorer that came with windows vista.

2931. End of Atari Auction, thanks.

Just wanted to say thanks to everyone who bought my Atari 8-bit and Atari
ST-Falcon
Computers and related software, hardware, books and mags.

Just about everything was sold and what didn't was donated.

I do not have anything to do with Atari Computers anymore.

The Auction is over, so please do not e-mail about Atari related stuff any
more.

Thanks and best of luck.
Barry

2933. "Dandy" clone for modern systems

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-15 10:22:49 UTC
From: bill@newbreedsoftware.com
Message-ID: <49bcd6f9$0$1601$742ec2ed@news.sonic.net>
Source record: 2372

I've began creating a modern clone of "Dandy" (the ancestor of Gauntlet)
using Simple DirectMedia Layer, an open source library for Linux,
Windows, Mac, BeOS, Amiga and various other systems and platforms.

It's written in C and utilizes a cellular automata map to control the
bad guys, just like Jack Pavelich's original Dandy. (I'm unsure whether
Ed Logg's Gauntlet in the arcade, or Tengen's Gauntlet on the Nintend (NES)
did exactly the same, but anyhow...)

It's pulled in a few concepts from Gauntlet (and gazillions of other
games since), such as different characters you can select from, with
different abilities. (One is very fast but has a weak weapon, another
is very slow but also very strong (high hit points), etc.)

The graphics are horrid, mostly drawn using a trackpad on my laptop,
though some that I whipped together tonight were done using a Wacom pad.

Tonight I added temporary upgrades you can collect (make a slow guy go
faster for a while, for example), initial varied artwork for the
characters (and their projectile weapons), and smooth scrolling.

Now, to make it even more on-topic to c.s.a.8, it probably would not
be an insane endeavor to try and port the game to Action! to run on
an Atari. >:^) But with Dandy already there, why would you bother?

Anyway, it lives here: http://www.newbreedsoftware.com/fop/
And is open source: GNU GPL.

Only source is available, as of this writing, but it should be
compilable on anything SDL and SDL_image compile on.
(See http://www.libsdl.org/ -- think iPhone, Nintendo DS, Wii, Sony PSP,
QNX, Sega Dreamcast, MorphOS, Amiga, GP2X, Pandora, etc...)

Bob Woolley, Atari 1200XL hacker extraordinairre (who also at one time
resurrected the print magazine "Atari Classics") has also offered to
speak at this event, as well as bring some of his hacked 1200XLs for
people to look at.

(He'll also be bringing an 800, 130XE and 1200XL to play games on,
bringing the total number of systems that we'll have, up and running
simultaneously, to 14! Spanning all Atari platforms[*],
from 2600 to Jaguar!)

[*] Well, no Pong, Portfolio palmtop, or IBM PC clones. :)

Try Arc version 5.00 for the straight across the board MS-DOS
equivalent of Atari's Super Arc and Super Unarc. Don't forget to snag
the documents for it - this is original System Enhancement Associates
(SEA) code with the famous Phil Katz curse within. I quote, "If you
fail to abide by the terms of this license, then your conscience will
haunt you for the rest of your life." Not so spooky stuff on the face
of it, but then Katz died a few years later on of self consumption...

http://www.utexas.edu/ftp/microlib/dos/z100/compress/
http://en.wikipedia.org/wiki/Phil_Katz

The file you want (or maybe don't want!! - boogety, boogety) is the
self-extracting arc500.exe and then the documentation on it is
arc5doc.arc.

On my system, I renamed it from arc.exe to arc500.exe so that WinZip
and others will not invoke it by chance. When I need to use it from a
batch file for example I just do:
arc500 a makemea.arc stufftocrunch.exe

And ONLY version 5.00 arc then gets used to make the arc file - after
over ten years of using it, I've never found the real Atari system
unable to uncompress the files made by version 5.00 arc from SEA.
Good stuff from 01/21/86 at 18:12:02.

Mine came preformatted in the package, so I just did a delete all and then
put my images on it.
If your asking about the SD card and not the CF card because the SIO2SD
doesn't use CF cards. I have never heard of an SIO2CF adapter.

My thoughts exactly. The SD card should be in FAT format (what DOS & Win use). Mine was already formatted when I bought it (or my digital camera formatted it into FAT format when I first used it?), and I'm able to access it easily under Linux on my laptop (has a built-in SD reader next to the headphone jacks :)).

Just make an "atari" folder at the root of the card, put your ATR disk images (or EXE, XEX, COM executables, which you can also boot directly into) in there. You can even have subfolders and navigate them using the SIO2SD's buttons. (I honestly haven't loaded mine with much yet, I haven't had too much time to play with my Atari 8-bit lately.)

Archive-name: atari-8-bit/welcome
Posting-Frequency: 10 days
Last-modified: March 10, 2009

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

I can't speak to the legality of publishing the forum discussions, but..

... it sounds like the PDFs are just giant scanned images.
It'd be useful to run them through an OCR (optical character recognition)
tool, to turn them back into text.

It might be something AtariMuseum.com would want.

I used the Commodore monitor cable to hook up to our 32 Inch flat screen TV.
It looked just great. For S-Video you could use the Commodore monitor cable
and a video adapter. Using this setup, I was able to hook the XE upto a PC
monitor with no problems.

My mistake, it is a SIO2SD not CF.
I bought a 4GB SD card, but after some reading, I may have to stick with a 2gb or 1gb.
I tried formatting the SD card with the FAT file system, but I still get a Card Init Error.
Do I need to stick with 1 or 2gb cards ?

Thanks,
Bill

I concur, Tempest Xtreem is pretty fantastic.

I scored 429,000 the other night. Died on the first red board, which I
think was the first board after the second bonus round.

Yes 1gb is fine. 4 gb is too much.

Oops...It appears the forums were on GEnie, not CompuServe - my mistake!

Also, the reason the files are so big is, correctly, because they are images - the original forums had many lines of header information before each message, so I chose to print them out in a three-column style, on a dot-matrix printer, in condensed type. Perfectly readable, and big paper saving, but not really suitable for OCR (I did try, Acrobat does not do a very good job of this style...)

I will check up on the couple of suggested locations to post these to.

Agent D.A.D.

2955. Re: HIP, RIP and TIP

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-23 12:30:28 UTC

Source record: 2394

> What do TIP and RIP do?

HIP was the first mode introduced. It interleaves Graphics 9 and 10
on alternating scanlines.
Due to the way GTIA works, Gr. 10 pixels are shifted one colour clock
to the right (ie half a pixel in that mode).
That can work to advantage - by alternating 2 copies of the picture
with the Gr. 9 and 10 lines swapped you get an "apparent" 160 pixels
across.
You can also simulate more luma levels since you get a kind of
averaging of pixel values, so can perceive intermediate values.
In HIP, you use 8 of the 9 available colour registers and represent
luma values 0,2... etc to 12, 14.

TIP is probably the most advanced use of Graphics 10 pixel-shift, it
also relies on PAL colour averaging between scanlines.
With TIP, you build a 2 displays with a repeating sequence of 4
lines...
Gr.11 (Colour only mode)
Gr. 9 (Luma only mode)
Gr. 11
Gr. 10 (paletted)

The second display is repetition of 11, 10, 11, 9.
So, by flicking between the 2 screens you get the perceived 160 pixels
across from mixing modes 9 and 10. You also have colour averaging
which allows 256 colours on the mode 9 lines and 128 on the mode 10
lines.
PAL colour averaging though does lose some saturation since the mode
9,10 lines are shades of white.

All of these modes rely on DLIs or a screen kernal to change the PRIOR
register on GTIA.

One last reminder! If you're anywhere near the SF Bay Area or
Sacramento, come on out to Davis for our first-ever "Atari Party"!

http://www.newbreedsoftware.com/atariparty/

This Saturday, March 28th, from 6pm to 9pm. Free, open to the public,
and children are welcome.

Come play on a dozen systems, spanning 2600 through Jaguar, including
8-bit and ST computers, and over 200 games! There'll even be a few
educational displays and guest speakers.

Davis Public Library
315 East 14th St
Davis, CA 95616

2961. Retrogaming Times TV

Newsgroup: comp.sys.atari.8bit
Date: 2009-03-27 21:21:22 UTC
From: Bryan Roppolo Boulder <brop99@hotmail.com>
Message-ID: <f89c4d79-54bd-4fc8-95fb-167a9920099c@r36g2000vbr.googlegroups.com>

Cross-posted to: comp.sys.ti,rec.games.video.classic,alt.games.video.classic,comp.sys.cbm,comp.sys.atari.8bit

HI!
I am floating around the idea of making a TV version of
Retrogaming Times Monthly, called Retrogaming Times TV, which would be
hosted on YouTube. It would be a central place to post videos on old
games for anything (reviews, homemade classic videogame cartoons,
interviews, etc). Thought I would mention that this could happen if I
can get enough people to submit videos to me. Old video game
commercials, interviews, etc would be able to be posted to this new TV
effort, just not something that somebody already has made himself and
posted on YouTube (such as a review done recently that already is on-
line on YouTube).
I was thinking of including many of the videos on RTTV also in
Retrogaming Times Monthly at its website, www.retrogamingtimes.com,
therefore giving videos posted on Retrogaming Times TV airtime at both
YouTube and the on-line magazine. To those interested in this venture,
send me an e-mail at bryan@retrogamingtimes.com. Thought it would be
neat to have both print and video outlets for Retrogaming Times
Monthly!

"Kind of Like MTV for Retrogamers"

P.S. Spread the word around about this to your friends so that
everyone that might be interested knows about this new effort for the
on-line magazine.

Sincerely,

Bryan Roppolo

Not to sound like a total crank, but is "Kind of Like MTV for
Retrogamers" supposed to be a -selling point?- I can't think of any
tagline that would inspire me to watch it -less.-

I have seen MTV recently, but I was thinking more along the lines that MTV and early 80s gaming go pretty much hand in hand as it defines that part of the decade. Might not have been phrased right, but the general idea was making a reference to MTV along with early 80s video games, became popular at the same time period. It's just something I threw out there as it came to mind with TV and gaming from the 80s.

Ack! I was planning to go to the Atari Party, but I have to
attend another event in Sacramento from 5 to 8 p.m.. :(
Good luck with the Atari Party.

Truly,
Robert Bernardo

What you are proposing is a video podcast, target audience being who are interested in classic gaming, trying to capture the production stylings and standards popularized in the 80's with the look of vintage MTV and/or Miami Vice. Fast paced, energetic presentations, brightly colored sets and wardrobes, big hair, parachute pants and mallrats hanging in the arcade.

Hi Byran--

That's a great start. I think it would make more sense to use stikcam
instead of Youtube. This way you can have live episodes as well as
storing recorded ones.

Just adding my 2cents :P

Duuude! You, of all people, I expected to be there! *disappointment*

In other news, Zach Matley, a homebrew Atari 2600 game developer who
happens to be out in the Sac. area, found out about the event, and is
bringing some more gear and games, and will be doing a short presentation!

Posting-Frequency: 10 days
Last-modified: March 10, 2009

Welcome to the comp.sys.atari.8bit newsgroup!

Discussion about 8 bit Atari micros.

Welcome to the Usenet newsgroup for discussion about the Atari 8-bit family
of computers! These include the Atari 400, 800, 1200XL, 600XL, 800XL, 65XE,
130XE, and 800XE personal/home computers, and the Atari XE video game system.

The 400/800/1200XL/600XL/800XL computers were produced from 1979-1984 by
Atari, Inc., of Sunnyvale, California, USA, while Atari was a division of
Warner Communications.

The 800XL/65XE/130XE/800XE computers and XE game system were produced from
1984-1992 by Atari Corp., also based in Sunnyvale, California, USA.

Today, the Atari computer intellectual property rights, along with the
home market rights to the Atari trademark itself, are owned by
Atari Interactive, Inc., a subsidiary of Infogrames Entertainment SA.

Hello:

If you were stranded on a desert island, with your Atari, and be able
to play them, what 5 games would you have to play, maybe before you
were picked up?
(The MULE folks please dont apply)

Gauntlet?
Zaxxon?
PacMan?

Dare go on ?

Atartris, because I'd need a Tetris fix now and then.
Star Raiders, because it's one of my all-time favorites.
Pac-Man's on the XL is a pretty good translation, so I'd agree with that.
And 'yes' to Gauntlet, if you're talking the space shooter. :)

Man, what would #5 be for me... hrm? BASIC or Action! ;) Esp. if I could
bring some books (De Re, Compute!s, etc.)

Star Raiders
Pole Position
Star Wars
Archon
Alternate Reality the dungeon

This really is quite hard. There are so many good games for the old girl.

Since you give Mule a free pass.
I would go one from each group with the following choices as good'nuff
RPG
AR City, AR Dungeon, Ultima III or Ultima IV
Board game
Sargon II, Sargon III, Chess Master<?>. The other games like checkers were
just too strong and Othello too boring for me.
Shoot'em
River Raid, Gorf, Galaxians, Star Raiders
Maze chase
Zenji

By no means an exhaustive list, didn't even get to side scrollers or
platforms.

In no particular order:

Ultima 3
Archon
Realm of Impossibility
Alternate Reality
Hitchhikers Guide To The Galaxy

Hello:

I am glad this post got some creative minds going, and the colorful
titles they are. I think I would keep Star Raiders, and PolePosition
and Archon would be in my top five, With Zaxxon there and one more
fill in, and do you have any RPG's for us old folks. I am hard on
joysticks and if I get to this island I might have to opt for a few
joysticks before I go for another game.

Hello:

I can imagine the noise coming from this deserted island, the locals
would think there is a war going on! and by any means you would have
so many dug out canoe's around the island, it would come out as a hot
spot for any one to come. I know this dont apply but as I sit here and
go a few steps further. I have to laugh in what the noises would
be ? ?

Alternate Reality, mate. There is none finer on ANY machine EVER. There
are 2 versions, The Dungeon and The City. A third was supposed to be
created but never made it. It is an incredible piece of programming.

My picks would be:
Montezuma's Revenge
Star League Baseball
Ball Blaster
Monster Bash
Pinball Construction Set

Well, to attempt that, you would need a Kodak Disk camera, but the film
as abandoned back in the 90's, so that would not be possible.

2994. Linux tool to convert images to Atari formats?

Newsgroup: comp.sys.atari.8bit
Date: 2009-04-01 22:54:36 UTC
From: bill@newbreedsoftware.com
Message-ID: <49d3f0ab$0$1676$742ec2ed@news.sonic.net>
Source record: 2433

Are there any easy-to-use tools to convert images to the different
Atari 8-bit formats (APAC, ColorView, HIP, TIP or even just Micropainter/Koaa)
that one can use on the command-line in Linux?

e.g. do something like:

jpeg2apac my_giant_picture.jpg PICTURE.APC

I'd even be happy with something you can chain along using pipes,
or cobble together, step-by-step in a shell script. e.g.:

djpeg my_giant_picture.jpg | pnmscale -xysize 320x192 | ... \
| pnmtoapac > PICTURE.APC

Thx!

Subject: Introduction

Conventions

All commercial vendors, developers, publishers, and repair shops should be listed here. "Active" PD/freeware/shareware developers should also be listed. Persons or entities holding rights to products, but not selling or supporting them in any way, should NOT be listed here.

"Vendor" = Reseller of products produced by others. Types of products sold are given in categories: new hardware, used hardware, PD/freeware/ shareware, (new) commercial software, used (commercial) software.

"Developer" = Producer of products. Titles of products produced by the developer are listed. No prices are given.

"Publisher" = Publishes a print or disk magazine, or a book. Complete subscription or ordering information should be given, including prices. Authorized online publishers of originally print or disk magazines are also listed. Online books are not listed.

"Repair Shop" = Can repair 8-bit Atari or related hardware devices. Be sure to make advance contact before sending anything to work on!

Entries are presented alphabetically by company name, or publication title. If no company name exists, a personal name is used. "See" references indicate complete information may be found under the given heading. "See also" references indicate closely-related information may be found under the given heading.

The month/year that vendor information was most recently fully verified is given at the "upper-right" of each entry.

Every entry must contain a valid postal address or web page address.

Unless explicitly requested by the vendor, no entries will include an email address due to the overwhelming amount of spam that would result.

The following is from http://www.upu.int/irc/en/ (2004.03.27)

When one writes to a stranger and requests a reply, it is considered polite to enclose a self-addressed stamped envelope. This works well when both persons live in the same country. However, if they are from different countries, the enclosed postage stamp will not be valid.

This technical problem was solved in 1906 when the Universal Postal Union, during its Congress in Rome, introduced the International Reply Coupon service. International Reply Coupons (IRC) are exchangeable in all member countries for the minimum postage of a priority item or an unregistered airmail letter sent to a foreign country.

The UPU's International Bureau processes approximately six million coupons each year and takes care of all accounting aspects. Developed countries are the largest users. The International Bureau does not sell ICRs directly to customers; they must buy them from their local post office. Although they are not obliged to sell ICRs, it is mandatory for all Posts of the UPU member countries to exchange the coupons.

Verfications -> YOU!

This list is in a constant state of development, and comes with no guarantees. Information of this nature constantly ages; therefore, the information contained in this list is constantly updated. Please use the latest release of this list whenever possible!

Remember, the success of this list is dependent on YOU, the reader, to send me updates that correct errors that you find. If you use this list, please do your part in keeping it useful for everyone!
